REAL

See evil in a whole new light.

Gradient lighting means enemies move in and out of the darkness as smoothly and realistically as predators of this or any other world. Bi-linear texturing means they stay sharp, up close and personal. 24-bit color means the red of their blood runs colder. And seamless junctures between network games on a universe of servers means this is immersion you never have to leave.

Unreal. Alter your reality...forever.

COVER STORY

EXCLUSIVE!!!

Wing Commander PROPHECY

94 All new, from the landing pad up, the fifth game in Origin's popular space fighter series is a visual knock-out. With a powerful new 3D engine and a renewed emphasis on gameplay, PROPHECY looks to eclipse all previous Wing COMMANDERS and both PRIVATEERS. So climb into the cockpit for your exclusive first look at the future of space combat.

FEATURES

Role-Playing Roundup!

104 After a long dry season in quality RPGs, role-playing is poised on a bona fide revival. We're staring down the dungeons of more than a dozen titles, with enough hack-'n'-slash to keep your fires lit 'til spring. Also, see our picks for the best RPGs of all time!

3D Graphics Overview

162 You've seen the hype, now get the facts. Our own Mr. Wizard, Loyd Case, helps explain the issues surrounding 3D cards, their features, and their fallings. Find out what you need to know about the most important new technology in gaming.

Systems include: 30-day money-back guarantee, 3 year limited warranty,* one year on site, Windows 95® w/30 Days Free Phone Support, Microsoft® IntelliMouse®, Windows® 95 ready 104-key keyboard, US Robotics 33.6 KBPS Fax/Data modem, tool-free mini tower case, and Ensomix Wavetable Card, Speakers & Mic, 24X Variable CD-ROM

Live the 3D experience. This is no game. Our PCs are serious 3D graphics machines. The kind that make your eyeballs jitter with ecstasy.

And our direct prices are *really* low. But the best part — these systems have the Intergraph name on them. A name that means graphics.

Go ahead, compare our 3D PC prices with other manufacturers' PCs without 3D. You'll see. Buying Intergraph is like getting 3D for FREE. No Lie!

So, live the 3D experience. Immerse yourself in the new and vivid universe of 3D. Let it coress your imagination and excite your soul.

• **3D Graphics.** Unbelievable at these prices! You get real 3D acceleration for Direct3D™ apps, mind-blowing 3D games and multimedia. It's a world of 3D realism with correct textures, Gouraud shading, environment mapping — *serious stuff.*

• **3D Sound.** Totally 3D. Our Ensoniq™ 3D sound card, mic and speakers deliver stereo surround, wrap-around effects and wavetable synthesis, plunging you into a realm of 3D sight *and* sound.

• **Spectacular Video.** Of course! Intergraph PCs give you MPEG and AVI compatibility, full-screen, smooth-motion video at 30 frames per second at resolutions up to 800 x 600. And you can scale, zoom and stretch in real time.

**It's where
you're going.
We'll take
you there.**

This is it! The 3D PC you want. Got to have. And the 3D is FREE! Don't wait. Get it NOW. Get Intergraph.

Get Medieval on Your PC!

*CGW Squires have fetched
many a demo for thee...*

A mixed bounty awaits thee at thy table tonight. Feast your eyes upon eight AVIs that preview many of the role-playing games featured in this very issue. Those who desire more than an eyeful can play the 11 playable demos, in addition to five of the greatest RPGs ever made for the PC. 'Tis a good time to be an RPG fan, yea verily.

How to Use the Disc

The CD is Autoplay enabled and should begin when you load it into the CD-ROM drive. Otherwise, select Run from the Program Manager in Windows 3.x, or Start Menu in Windows 95, and type D:\RUNME (where D is the letter of your CD-ROM drive) to run it straight from the CD. You may type D:\INSTALL to create a CGW program group on your Windows desktop for future fun. Many demos require the disc to be in the CD-ROM drive in order to run; therefore, we recommend installing the demos from our disc.

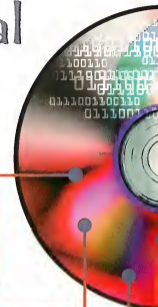

CURSE OF MONKEY ISLAND The much-anticipated third chapter to LucasArts' popular adventure game.

LEGENDS OF KESMAI

How to Access Patch Files

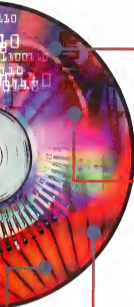

Click on Patches under the CGW Features, and then read the text window that has instructions on copying the files to your hard drive. You can also access the patches from a DOS prompt by typing D:\PATCHES (where D: is the letter of your CD-ROM drive) and copying them directly to your hard drive. We strongly recommend that you back up any previously saved games before installing a patch, as this may overwrite your existing program.

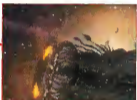

BETRAYAL AT KRONOOR

WIZARDRY VI: BANE OF THE COSMIC FORGE

WIPEOUT XL Prognosis brings the popular PlayStation arcade-racer to the PC.

WING COMMANDER: PROPHECY Sit down, grab your popcorn, and enjoy the trailer for Origin's next space epic.

Didn't Get the CD-ROM?

Look for our CD-ROM version wherever you buy Computer Gaming World.

To subscribe to the CD-ROM version of the magazine, call (303) 685-8930, and specify that you want the CD-ROM version. Please note that if you already receive the magazine without the CD, you must wait until your current subscription expires before receiving the CD version.

If you have a problem receiving the CD version, send an email with your name, address, phone number, and subscriber number to cgw@neodata.com. Neodata is a magazine fulfillment house which is not owned or operated by Ziff-Davis.

NASCAR RACING 2 Two new tracks for the best racing-sim of '96 from Sierra On-Line.

CONSTRUCTOR SimCity with attitude from Acclaim.

DEATH is NOTHING

Play as one of 4 death-dealing
Mageslayers across dozens
of hellish levels.

Death would be too easy.

Too little to repay a
thousand year old debt.

Too quick to satisfy the hunger of one you
betrayed and left to the ravages of the Mages
in another millennium.

Before **LORE THANE** extracts

his terrible price on your body and **SOUL**, you are
bound to wander through five worlds of atrocity.

Slaking your powers. Solving infernal mysteries.
Gathering **MAGIC** and arcane knowledge.

Fighting your way through **FEAR** into **MADNESS**
for one last, desperate struggle against **Evil**, himself.

Only then will he **anoint YOU** with the last
sacraments of your torment.

No, **Death** would be too easy.

A malevolent
3D fantasy quest,
from the creators of
HEXEN™ and **HEXEN II™**

An all-powerful war chest of
magical attacks like Chain Lightning
and the Firewhip.

Spread the Evil with several
modes of MultiSlayer action
for up to 16 players.

GameSpot

CGW's Home on the Web

Ziff-Davis has combined the expertise of CGW and GameSpot to bring you the best gaming resources on the Web. Whether it's the latest game demos, breaking reviews, hot scoops, or detailed strategies, you'll find everything you need to stay on the cutting edge. In addition, watch for our groundbreaking new hardware site, Upgrade!, with Loyd Case's top picks for peak performance.

<http://cgw.gamespot.com/october>

As you read through your issue of CGW each month, watch for the CG Online bug, which points to a related online article at www.computergaming.com. If you're interested in taking part in our discussions about gaming, check out the CGW Forums on

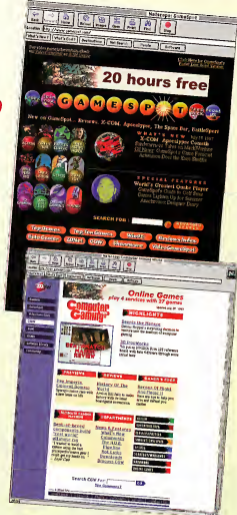

ZDNet at www.zdnet.com. CGW reviewer and columnist Dennis McCauley and CGW Symp Arlan Levitan host ongoing discussions on ZDNet's Community Center.

If you're looking for the earliest news and reviews in gaming, turn to the experts at GameSpot. Here's a brief overview of what you can expect on GameSpot over the next few weeks. To see these articles and others, point your browser to the ultimate gaming page at <http://cgw.gamespot.com/october>.

Computer Gaming World

Turn to CGW Online for news, reviews, strategy articles, and behind-the-scenes features on hundreds of top computer games. Because of our joint venture with GameSpot, you'll also see some articles posted online before they're in print!

Highlights this month include an exclusive behind-the-scenes look at Westwood Studios! You'll see the latest on Westwood's incredible new lineup, including *Blade Runner*, *Command & Conquer: Sole Survivor*, *Landings of Lone III*, *Command & Conquer 2* and more. You'll also want to see Sir-Tech's upcoming *X-Files*, one of the hottest titles on display at E3. If you like your combat fast and furious, this third person action game will light your fire. Point your browser to www.computergaming.com.

What's On GameSpot?

STRATEGY GUIDES

Where's the best place on the Web to find strategy guides for all the games you're playing? GameSpot, of course. If you're looking for help with *X-Files* vs. *The Frighter*, look no further. You'll find everything you need to become the ace pilot of your dreams.

For those who prefer to hide out below ground, GameSpot's guide to *Dungeon Keeper* will help you maximize your potential. With our help, neither pesky heroes nor

DEFIANCE

"Like Rebel Assault™ with real gameplay."

"... sharp 3D engine that looks like it could stand toe to toe with Quake™."

other dungeon keepers will be any match for you. And it doesn't stop there. Check out our strategy guides for *Interstate '76*, *MDK*, *Magia: The Gathering*, *Diablo*, and many more of the hottest games.

GAMESPOT NEWS

If you've been watching *GameSpot News* over the last few months, you'll know that we were the first to bring you live coverage from the show floor of the Electronic Entertainment Expo (E3) each day. You'll also remember that we had exclusive screenshots of GT Interactive's new action-RPG *You're on the Line*, and that Dave Perry talked to us first about *Missiah*, his new game for Shiny Entertainment. The proof is in the pages. For the very latest in computer and video game-related news, *GameSpot News* is the place to be.

DESIGNER DIARIES

GameSpot's Designer Diaries provide ongoing coverage of games in development, as told by the developers themselves. Tom Hall of

ION Storm, who reports weekly on the progress of his new game *Awakened*, recently discussed the process of making design decisions for the perspective and control system in the game. "We're choosing a new way of doing things, and I think it is the best way...there aren't any clear-cut choices nor any true examples of what I want to do, so I have to trust my instincts. And my instincts tell me this is going to rock!"

Look out, too, for *Designer Diaries* from Activision, for both *Duke Reck* and *Zork: Grand Inquisitor*, and from Sierra Online for *Quest for Glory: Dragon Fire*.

FEATURES

The *GameSpot Features* Department covers a wide variety of stories that will appeal to both hard-core and casual gamers alike. Examine the History of the 3D Shooter, as our feature follows the development of one of the most popular genres in computer gaming. From *Wolfenstein 3D* to *Quake*...and beyond. It's all there.

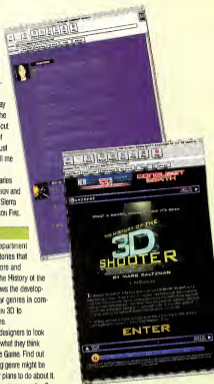

We've asked adventure game designers to look into their crystal balls and tell us what they think about the Future of the Adventure Game. Find out their opinions on where this ailing genre might be headed, and what each designer plans to do about it.

Wondering where you can buy games online? *GameSpot's* recent feature, a Guide to Buying Games Online, not only shows you where you can purchase your favorite games, but also compares prices and availability, to ensure you get the best possible deal, every time you shop.

For all this and more, head over to *GameSpot's* Special Features section.

DEMOS

GameSpot has one of the most extensive libraries of game demos, patches, and utilities online. In fact, you can try many of the games reviewed in this month's issue of *CSW* by downloading the demos from *GameSpot's* site. Look out for *Mini Puppet*, *Wireout XL*, *Carnagecock*, *Front Page Sports: Baseball Pro '98*, *Warlords III*, and *X-Com: Apocalypse*. We upload new demos daily, so be sure to come back for more.

The Odds are against you.

He's skinny. He wears a loincloth. He has no weapons.
(He's the guy that you play.)

Walk. Talk. Feel. Hide. Think. And take on the ugliest bunch of carnivorous crustaceans this side of a baboon's butt in a new kind of game and a brave new world of interaction.

From slave-laborer at Rapture Farms to Liberator of

the Mudokon, it can all be yours. That is, if you can make it through the most inexplicably challenging gameplay in the known universe.

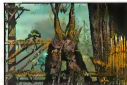

Communicate with real characters. But, not in some cardboard RPG. Blow away your enemies. But, not in some

don't get mad: get elum

The Critic As Busybody

Does Anyone Really Care About Subject Matter?

Some people don't think that editors and game reviewers should ever write about anything except the computer games themselves. Others think that we should merely talk about the way the game plays and never comment on particular artistic techniques, design decisions, or technological innovations. Such people either have tunnel vision or live in a world of denial, insisting that neither art, fiction, movies, nor games affect the way we view ourselves and view life.

Yet, art forms do affect the way we view life. Just as Impressionists rejected "realistic" painting and tried to show something new about light and color, so can games force us to see life in a new light. They can be a catharsis, as we reject what we don't like about life and exult in a Dionysian feast of near-unlimited power and resources; a cultural corrective, as we view fictional actions from another perspective and decide to reject the bogus perspective; or they can be inspiring, as they raise our consciousness about something that we have overlooked. They may even cause us to do further research. But, of course, they can also be irrelevant.

As I write this editorial, Elliott Chin has received virtual tons of flaming emails because of his stand on the racial slurs and slop-

py research contained in *Shadow Warrior* and how those elements impoverished the game experience. Most of his critics hit upon his racial heritage as a cause of bias, thereby proving his point. Others claimed he had no sense of humor. Yet, what they didn't hear was his point that the game would have been better without the cultural denigration.

“**SHADOW
WARRIOR and
DEATHLORDS
are just
games. But
they could
have been
good
games!**”

This isn't the first time CGW has castigated a game publisher for tapping Oriental source material to develop a cheap knock-off of a successful game system. Scorpio, who is not of Asian heritage, insisted that Electronic Arts' *DEATHLORDS* was a cheap rip-off of *Ultima*, with only a thin veneer of Orientalia to cover its tracks. She insisted that the Eastern cultures would have provided a richer gam-

ing experience if the designers had bothered to get it right. Racial slurs aside, both *Shadow Warrior* and *Deathlords* could have educated, stimulated, and entertained more effectively if they had paid attention to true Asian culture. Yes, they're just games. But they could have been good games! (See the Letters column for more on this controversy.)

I recently had a similar experience when I mentioned my pacifist political leanings in the CG-ROOM Welcome Letter. I was told that I was a hypocrite. I don't think so. I like to play wargames because they are analytical history. They teach lessons of geography, leadership, resource management, and strategy. I like to see what went

wrong or right and try to figure out experientially why a given battle came out the way it did. Sometimes, my pacifist leanings are affirmed as I realize the stupidity of a particular move. Sometimes, I shake my head in wonder at the sacrifices paid for the freedom I enjoy. Frankly, I don't think it's wrong for me to share my insights from time to time, even if you don't agree with them. Our hobby would be a meaningless place if we didn't hold up the games to the real world from time to time and see how they stack up. ☹

TOTALLY UNCOOL Elliott Chin's editorial about racism in 3D Realms' *Shadow Warrior* (this cool hat-wearing zombie is a good example) ruffled some feathers. But just imagine if this zombie were an African-American with an Aunt Jemima bandana.

It not only sets a new standard in flight simulation, but goes well beyond anything out there. Introducing Sierra

Pra Pilot. Never before has a single flight simulator captured

this experience so completely. Here, you'll find the broad strokes and the fine touches. You'll choose from

WE DIDN'T SET OUT TO JUST A SMALL PART OF

a hangar of five civilian aircraft, ranging from the introductory Cessna 172 Skyhawk to the dual-thrilled thrill of a Citation

navigate the sky with the close company of other planes. Then, upon touchdown, debrief and compare your performance to over 30 full-motion preparation videos. This is Pro Pilot: The Complete Flight Simulator. Both a statement of what a flight sim should be today, and the promise of what one can be tomorrow.

S I E R R A[®]

LETTER OF THE MONTH

DEEP THOUGHTS

I've been one of those typical types who has been reading your magazine since the mid-'80s. Many games and systems have come and gone from my desk ever since, but I guess it's just now that I've got some "Food for thought" questions that have been bugging me...

1. Do you notice how the majority of five-star rated games in your magazine are either wargames or sims? I don't think even those gems in the sand like *DIABLO* and *RED ALERT* rated five stars. Sure this is a generalization but...

2. Do you notice how you can tell a highly anticipated game has missed its mark by the distinct silence by the masses (PREDATOR 2 and quite possibly X-WING VS. TIE FIGHTER) in contrast to the shield banging that preceded its release?

3. I'm sure some will start hammering Elliott Chin's article on *SHADOW WARRIOR*, but the man does have a point. One of your competitors, in response to a "Why are there no African-American heroes in PC games?" pointed (quite seriously) to the character of "Superfly Johnson" in ION Storm's upcoming game *DAIKATANA* as some kind of consolation. Superfly Johnson? I had to shake my head at that one...and yep, you guessed it, I'm an African American (and a computer security specialist who's never been called "Superfly," or "Shuff" for that matter.... Although I hear that Shuff is a bad matha.)

These aren't necessarily critiques of your magazine, mind you, just some pseudo-intellectual musings from a dedicated reader.

Chris Martin
via the Internet

1. We rate only between 15-20 games with five-star ratings each year. Sometimes, sims and wargames get the edge because there are real-world measurements by which to judge them. Also, we factor difficulty levels into the ratings and may be more lenient on the graphics or interface of a more difficult game that we know will appeal to the hard-core, even if it might not appeal to the masses. For the record, *DIABLO* was given a 4.5-star rating, even though we eventually picked it as *Game of the Year*, because it was too short and the role-playing elements weren't that deep. Since it was positioned as an RPG by its advertising, we had to be tougher than we normally would. Also, we had to compare *RED ALERT* with its award-winning predecessor. Did it advance the state of the art? Some of the staff said "yes" while others said "no." We settled for 4.5 stars.

2. That silence explains why it's our policy to wait to review a game until we have a final copy. You can't know until you play the code or it is tested and play-balanced. Anything else is merely an educated guess—a guess that can be wrong.

3. With regard to Shuff, "Short ya' mouth." Well, you are talking about Shuff. You're right. See the letters under "Shadow Horror" in Johnny Wilson's editorial this month.

SHADOW HORROR

When I read Elliott Chin's article [August] on my favorite game, *SHADOW WARRIOR*, I was outraged and in disbelief, the first thing that came to mind was hypocrisy! I love this game. It is the heir to *DUO3D* and I look at it as a game that has a cool sense of humor like *DUO*; did my friends and I laughed hysterically at how it was racist. No, Elliott, you missed the point; it is in a Jackie Chan type of chop-socky humor. If this is racist, so is *DUO* because he is a womanizer. But that is okay because he is white.

How come you don't complain about Lani Croft in *TOMMY RANGER* being stereotyped, or *REINER RANGER*? No, that isn't racist. I think Lo Wang is a great character and I would love to be him. I think that 3D Realms is doing their job because they thrive on controversy. You started to even knock *PRED* for having a Native American hero. I think it is great that 3D Realms is even having a hero from this great culture! And I bet you didn't see the screenshots or the story and how it is the most advanced game ever. Well, Elliott, better bite your tongue because the full *SHADOW WARRIOR* will have more fun and controversy.

James R. Fleming
via the Internet

Elliott Chin's article blasted *SHADOW WARRIOR* for what he felt was an inaccurate portrayal of Asian culture, and for failing to adhere strictly to the historical fact of the rings of Ancient Japan. Beyond that, the column positively damned 3D Realms for blatant insensitivity to the damaging effects the racial stereotypes in the game might have upon its audience. Mr. Chin expressed repeatedly the offense he took at 3D Realms' "ignorance and disregard for real Asian culture." Mr. Chin requests that *SHADOW WARRIOR* be the last 3D Realms game to obtain

its "cheap laughs" at the expense of a minority.

I, on the other hand, would prefer that Mr. Chin's article be the last in *CCW* to assume that its readers look to 3D action shooters as a primary source of cultural education. How can he expect anyone with the intelligence to install a recent computer game to sit down to a session of *SHADOW WARRIOR* with the same degree of intellectual involvement as one might devote to, say, *RAMP*? Mr. Chin's comments fail to persuade on two separate counts. Firstly, his "ignorance and disregard" for my own capacity for critical thought. Secondly, because he has fallen

“My friends and I laughed hysterically at how [Shadow Warrior] was racist.”

face first into the saddest trap of political correctness—a complete lack of humor.

The major criticism made against *SHADOW WARRIOR* is that, when attempting to create an authentic ninjo adventure, 3D Realms merely caricatured the subject matter. It is a caricature, as much as *Duke Nukem 3D* was a caricature of action films.

Unfortunately, I cannot look upon Mr. Chin's comments as any sort of objective review because, I'm sorry, *lek Asian*. Perhaps I would have respected the article more if he had come to the rescue of our downtrodden Midwestern brothers so rudely affronted in *REVENGE RAINCE*. What was it Voltaire said? "I may not agree with what you say, but I will defend to the death your right to say it." Just don't say it about me, oh Mr. Chin?

If I seek cultural education, I'll seek *Farewell My Concubine* again. If I want to play an interactive computer game, I will do so without regard for any bearded eggs on the part of those who might associate themselves with the game's subject matter. Such an association is purely their own invention. If Mr. Chin wishes, he always has the right to avoid ever playing that game or any game ever again. (If he ever does exercise that right, I'd like his job.)

The last thing I would expect from 3D Realms is enlightenment. The last thing I would expect from a magazine that has always championed complete freedom in game design—a magazine that adopted a cavalier attitude toward the depiction of women in *Duke 3D*—is a diatribe on the industry's confusion about the differences between China and Japan. Perhaps *Duke 3D* was even more offensive, but the newness and innovation of the Build engine made it all forgivable. Now that the engine is questionable subject matter choices has fallen. But such behavior is hypocrisy, and if you as the media and we as the audience begin to permit such behavior, we must realize that it weakens our resistance to the likes of Senator Lieberman. If we insist

that anything and everything is fair game, there is little such men can do to regulate us. Once we start qualifying our own freedom, we are in trouble.

Fred Snyder
via the Internet

I was about to write a letter to CGW when the August issue arrived in my mailbox and I saw that Elliott Chin had already spoken up for me. The first time I saw the *SHADOW WARRIOR* ad, I was extremely disgusted. Not just by the violence, but by the making fun of Asian culture. Worse of all

the yin-yang symbol has been defaced with blood splattering out of one

"hole." And nothing spoiled my day even more than seeing it on the front page of my favorite magazine. I know that CGW in the past has had certain

criteria for ads appearing in its magazine (first the X-rated, then the violent kind of ads). Maybe this should be extended to racist ads as well?

All in all, *SHADOW WARRIOR* will not be getting my (and this half of the world's) support. 3D Realms' reputation has also fallen in my regard as a sadistic company that abuses others for laughs. And, yes, fortune cookies do not exist here; they were probably created by Americans.

Rock Ong
Singapore

After reading Elliott Chin's editorial on the offensiveness of *SHADOW WARRIOR*, I was curious to hear what people are saying on the Apogee forum on AOL. Being Asian, I too was offended by the portrayals in *SHADOW WARRIOR*. I thought Mr. Chin's comments were right on the mark. Anyway, I found a few comments on the Apogee forum that pertained to the CGW editorial. Most are just snide remarks about Mr. Chin and blew off his comments. However, I found a response by Mr. George Broussard of Apogee on the editorial dated July 2, 1997. He wrote

INTERACTIVE
You've been warned.

"This was not a game review, but just an editorial by Elliott Chin on how offensive he found SW. Personally I think he needs to get out more :) All of his points are easily defeated — George Broussard, Pres., 3D Realms"

I was rather taken aback by his statement that Mr. Chin's comments are "easily defeated." I wanted to know what it is to "defeat" an Asian-American gamer's perception of racism and inaccuracies in SHADOW WARRIOR. I then posted a message on the Apogee forum with my comments and invited Mr. Broussard to "defeat" Mr. Chin's points. I hoped for a reply but I was surprised to see my post removed from the board on the following day! Is this the way Apogee and Mr. Broussard respond to criticisms from Asian-American gamers?

Wally Huang
via the Internet

This controversy definitely affirms our decision to print the editorial. The hostile reactions suggest that many gamers do not think of the larger consequences and messages of the games they play. Elliott Chin responds:

I understand that the point of SHADOW WARRIOR is to have and make fun with Asian stereotypes, but it's only funny for those non-Asians who don't care to put themselves in an Asian American's shoes.

3D Realms says it created all the stereotypes on purpose, choosing to create an outrageous parody of old "chop-socky" movies. But using coonies and footie coonies goes too far. Coonies we are actually slaves, captured and coerced into servitude; you wouldn't create a game with black slaves, so coonies should likewise be off-limits.

Yes, Last Conf's proportions do smack of sexism, but as for REDNECK RAMPAGE, that's a little different. If you are the Asian community and have zero visibility in the media, you can hardly afford to have your only exposure be one of ridicule and stereotypes. Caucasian,

on the other hand, have the most exposure of any group in America. The heroes in nearly all computer games, not to mention movies and TV shows, are white. Believe me, if there were more Afro-Mexican and Asian heroes in games, I wouldn't complain so vociferously about SHADOW WARRIOR. Also, decades of Asian stereotypes and discrimination in the media simply make SHADOW WARRIOR's stereotypes seem gratuitous and insensitive, as opposed to REDNECK's humorous caricatures of whites, who have never suffered any form of discrimination in this country.

Rednecks were never taken from their homes and forced into concentration camps for no reason other than the color of their skin, as Japanese-Americans were. Nor have they ever had their homes and property confiscated. Unlike Chinese-Americans, Rednecks were never pressed into service to build the more treacherous western half of the American transcontinental railroad. Rednecks were never denied education, job opportunities, or homes because of their skin color, as all Asian-Americans were before a few decades ago. And Rednecks were never considered second-class citizens by law, as all Asian-Americans used to be.

I would like to thank everyone who responded, because you showed me that I was correct in writing a column on SHADOW WARRIOR's stereotypes.

6. It's 12 of the greatest role playing fantasy adventures ever, gathered in one boxed set.

"Fallout has everything necessary to be the best roleplaying game of all time"

- Next Generation, November 1995
2054, the

A NEW BREED OF RPG

In the recent wave of fantasy RPG-lites, FALLOUT's past apocalyptic vision sets a new standard for today's role-players.

Cutting edge technology with 3D-rendered personalities adds a whole new level of dynamic sophistication to character interaction.

With unusual characters, hidden surprises, unique locales, and multiple death sequences, FALLOUT packs a replay value few games can match.

• If you agitate someone with your comments, they'll look and act agitated and remember that encounter. Depending on the player's choice of conversation topics, characters will look happy, normal, and/or angry!

• Over 50 mini-quests with multiple solutions take you through devastated wastelands such as Rad Scorpion dens, Junktown, and the Brotherhood of Steel.

• Meticulous turn-based combat system lets you target specific body parts to wound, cripple, or kill as you see fit.

• Make your own character or start with one of three pre-generated types: Diplomatic, Deceptive, or Combative.

• Victims don't just perish—they get cut in half, melt into a pile of goo, and explode like a blood sausage into chunks of flesh.

• Improve your character's skills through play and receive perks tailored to your character's abilities.

• Available on WIN95/DOS and Mac CD-ROM.

7. Fallout is a post-nuclear role playing game with over 50 mini-quests where you can target specific body parts to:

LucasArts Adds Another Star Wars Title to Its Fall Lineup

For the past year we've been waiting to play a Jedi or an Emperor in LucasArts' Jedi Knight or Rebellion, respectively, but it looks like the next Star Wars game to hit the PC desktop won't be either of them. *Swoovs* of the Empire PC, a game that unfolds between *The*

Empire Strikes Back and *Return of the Jedi*, is set to arrive this fall. Though the release dates for LucasArts games have always been tenuous, *Swoovs* PC could come out on schedule because of one important fact: The game's been done for a year.

Swoovs PC is actually a port of the successful *Swoovs* of the Empire game that LucasArts developed for Nintendo's N64 launch. The game received mixed reviews, but was a commercial success. Now that Nintendo's one-year exclusive on the title has expired, LucasArts is ready to release *Swoovs* for PC fans who just can't get enough of the Force.

One important note, though: You will need a 3D accelerator to play this game. *Swoovs* had amazing graphics on the Nintendo 64, and in order to maintain that same level of visual quality, a 3D card will be required for PC Play.

Swoovs PC is the story of a mercenary named Dash Rendar, who stumbles headlong into a turf war between the Emperor's two main pit bulls—Darth Vader and Prince Xizor (Xizor is the leader of the Empire's most powerful crime syndicate, Black Sun). As Dash, you help the Rebels fight against the Empire, play bodyguard to Luke Skywalker, and assume a key role in the penultimate battle between Vader, Xizor, and the Rebel Alliance.

Gameplay in *Swoovs* is incredibly varied. In the first level (which is possibly the most fun) you pilot a snowspeeder on the arctic planet

THIS JUST IN

Short takes on games and hardware released just prior to press time.

JANE'S COMBAT STICK

An updated version of the F-16 Combat Stick, this flight controller sports some mechanical fine-tuning as well as a bundled copy of the full DOS version of Jane's ATE. With two four-way view hats, six buttons, X- and Y-axis trim adjustments, and an analog throttle, Jane's Combat Stick by itself provides all the options many gamers need.

The stick features a larger base than its F-16 predecessor. One limitation of the Combat Stick series

has been its use of chorded buttons to get extra functions—multiple buttons couldn't be read simultaneously. The Jane's stick, however, adds a switch that allows any combination of simultaneous button presses when attached to a CH Pro Throttle. The stick isn't programmable by itself, but is when used in combination with the Pro Throttle. —Denny Allen

FORMULA 1

If you liked *Wipeout*, you'll probably like *Formula 1*. Polytron's latest racing game features great graphics, an excellent soundtrack,

Poe Will Join Bruce Willis on Apocalyptic Journey

Gold-selling recording artist Poe recently signed an agreement with Activision to take part in the company's upcoming title, *Apocalypse*. The alternative songstress, whose hits include "Hello" and (my personal favorite) "Angry Johnn," will find herself doing battle with *Die Hard* actor Bruce Willis, who signed on for a key role in the project earlier this year. The game takes place in a dark, futuristic world where the dominant cultural forces—religion and science—preach their respective forms of salvation. Poe plays rock diva and pop culture queen Mary Magdalene, who has been transformed into the evil Plague, one of the Horsemen of the Apocalypse. With the help of Willis, your virtual wingman and sidekick, you'll seek out and destroy Plague and the other Horsemen of the Apocalypse, thus saving the world. —Charlotte Panther

Poe

and all of the classic tracks. Yet, it doesn't have the amazing driver AI of *Gears of War II*, nor the incredible physics model of Microsoft's upcoming *CART Precision Rivals*. Instead, what you get is fast-moving action, the names (but not even the artificial personality) of famous drivers, the basic characteristics of the various cars (but without the depth of the models in competing products), and a full circuit of Formula 1 races. Still, the 3D looks great and the action is non-stop. Only serious simulation buffs will have qualms. —Johnny L. Wilson

EYE

Part art project, part game, Peter Gabriel's *Eve* doesn't have enough of either to succeed. Gameplay focuses on exploring various symbolic worlds and uncovering musical loops. Gabriel's music is the real highlight here, but there isn't enough of it to draw the disparate art projects, by a selection of visual artists, together. Unlike similar products from true performance artists like Laurie Anderson and The Residents, *Eve* just doesn't add up to a compelling, unique whole. With only the most rudimentary of gameplay

News Flash

► **Sierra On-Line** recently announced that it has dropped the price point on its *Screamin'* 3D Accelerator Card from \$199.95 to \$149.95. This \$50 reduction comes just in time to help strengthen Sierra's position in the competitive 3D-card market during the holiday season. The *Screamin'* 3D Accelerator uses the Rendition Verité V100 graphics processor with 4MB of 600 DRAM, and supports DirectDraw and Direct 3D.

► Sierra's Parent corporation, **CUC**, has announced a new distribution deal with **CyberFlix, Inc.** CUC will distribute CyberFlix's adventure game, *Twinnor: Adventure Out of Time*. The deal follows the announcement that Twinnor's previous distributor, **GTE Entertainment**, will discontinue operations.

► **SSI** (Strategic Simulations, Inc.) and **Headland Digital Media, Inc.** announced that they are working together on an online gaming venture. The two companies will form **Club SSI**, an online community for wargame and strategy gamers. Club SSI will provide a place for game enthusiasts to meet and match up with other players online. The launch of Club SSI is scheduled to coincide with the release of *Warner General II* in October. At press time, a pricing plan for Club SSI had not yet been determined.

► Hollywood developer **Chronic Entertainment** is currently working on *Men in Black*, a third-person action-adventure game based on the hit movie starring Will Smith and Tommy Lee Jones. The title will feature hand-drawn polygonal animations of Smith and Jones, along with a vast array of weapons from the movie and, of course, the aliens. The game is scheduled for a fall release, and will be published by **The Design League**.

(most of it of the pixel-hunting variety), there's just not enough to *Eve* to warrant gamers' time. —Robert Coffey

MICROSOFT ENTERTAINMENT PACK: THE PUZZLE COLLECTION

The Microsoft Entertainment Packs are perfect when you desperately need a five minute distraction. The latest addition to the series, *The Puzzle Collection*, includes 10 all-new puzzles, several of which were created by Tetris designer Alexey Pajitnov. The Tetris influence is noticeable in puzzles like

LineUp, in which players must place five block pieces onto a grid to form complete lines (vertically or horizontally). Other puzzles are completely off the wall—*Rat Poker* has you trapping and releasing different colored rats to create winning poker hands. Once you start playing these highly addictive puzzles, it's hard to tear yourself away. You have been warned. —Charlotte Panther

Undercover Gaming

PalmPilot's Stealthy Games Let You Goof Off Without Getting Caught

The US Robotics PalmPilot is quite the personal productivity device. It allows you to keep track of your schedule, phone numbers, and "to do" lists. You can use it to take notes in meetings, track expenses, read books, and even to tune your guitar. You may know all that, but did you know it might also save your sanity?

Say, for example, you are stuck in a three-hour meeting or a class that just won't end. Perhaps you are attending a lecture and the speaker seems to have a Ph.D. in rambling. Wouldn't you rather be...

West of House

You are standing in an open field west of a white house, with a boarded front door.

There is a mailbox here.

That's right. While everyone else assumes that you're taking copious notes, you can actually be playing *Zork*, *Planetfall*, or any of the text-based Infocom games that have been ported over to the Pilot. You can also play classics like Chess, *Sue Hart*, *Missile*

Command, *Blocks* (a Tetris clone), *Pong*, *Life*, *Blackjack*, and *Solitaire*.

If any of you are thinking "Big deal. I'd rather play *Gluke* or *WuCanet* or *Dangerball*," consider this: There are times when pulling out a notebook computer and launching *Duino* will get you in trouble. Try it in a meeting at work some time if you think I'm kidding. The next time you're sitting there, bored to tears with no conceivable escape route, you'll wish you had a Pilot loaded with that *Zork III* game you never finished.

For more information about the things you can do with your Pilot (including shareware and freeware game downloads), check out www.pilotgear.com and <http://198.70.114.128/jstinger/jstingersoft.com>.

Before I go, let me say something to Tim and Michael, my managers. CGW forced me to concoct this story. I really have no idea what I'm talking about. Games on the Pilot? That's news to me. I've never heard of such a thing. The whole idea is just preposterous. It's the most ridiculous thing I've ever heard in my life. Just please don't ask me to show you my notes from last Tuesday's meeting....—Greg Fortune

PRO PINBALL: TIMESHOCK

While some pinball games maintain the sense of table size by scrolling, Empire Interactive has decided to

cram the entire table into one screen. While the sites and sounds of the game are

well done, the fact that the entire table is packed into whatever size monitor you have makes it difficult to follow the ball at times. The game is pretty tweakable, and requires a lot of pinball savvy to actually finish, so hard-core pinballers will want to check it out. The rest of us will need to brush up on our skills, or else just admire the pretty (but busy) table.—Thierry Nguyen

TENNIS ELBOW

Most tennis games on the computer or console are little more than *Pong* on steroids. To its credit, *Tennis Elbow* tries hard to be real tennis, complete with

overhead smashes and low volleys. The French love of tennis comes out in the variety of shot selections, as the game even differentiates between a defensive lob and *lob d'attaque*. The world circuit, featuring more than 50 events and rankings for 250 simulated players, is robust as well. Still, much of this we've seen before—most notably in the Amiga version of *Pro Tennis Tour* (1991, Ubi Soft)—and it's a real shame that the controls for tennis simulations don't seem to have advanced much in the past half-decade. —Bry Coleman

Prepare to meet thy maker.

When you're ready for skull-crushing, hard-hitting, tournament style action ... you're ready for Drachen Zor™. Not just another fighting game, Drachen Zor takes you on a no-holds-barred battle through the nine blood pits of Drakkoe – a mystical fantasy world where 16 high-definition, fully-mobile, 3D warriors all fight to become Warlord of the Dragon Gate.

Fight one character at a time, or up to three others with its multiplayer networking mode – either way, you'll encounter combatants of all shapes and sizes attacking from all angles. And with more than 54,000 different playing combinations, you could play this game forever.

Assuming you don't meet thy maker first.

3D Iron Works

Researching this edition of the Works took me to Seattle for Microsoft's big DirectX Love In, known as Meldown. This bi-annual event is a chance for hardware guys and software guys to get together and see if they can all just get along. As a new version of DirectX nears rev. 1.0, hardware guys bring their wares, while they're still working on drivers, and software guys bring their DirectX titles under development and try running them on the different hardware platforms. The idea is to kill bugs dead before games or drivers hit store shelves. The hardware guys consist mostly of system and graphics chip and board makers, so naturally it is a primo opportunity to do some snooping around and see what's shakin'.

Among the graphics guys, the usual suspects were holding forth on the chip side: **3Dfx**, **Rendition**, **Matrox**, **S3**, **ATI**, **Number 9**, et al. But the chip that seemed to be the conference darling was **NVIDIA's** Riva 128, a newcomer to the scene whose 2D and 3D performance will make it a very tough competitor this fall. The Riva 128 is featured on boards from both **Diamond** and

STB, and 4MB boards will most likely hit the streets for under \$200. We'll be looking at both boards in next month's 3D graphics roundup.

Rendition was testing their V2200 part and, just for grins, waited until developers noticed how much faster their games ran to tell them it was the V2200, not the first-generation V1000. We'll be putting a V2200 reference board through its paces next month as well.

But the real shocker had to be Matrox's decision to do a PowerVR based board, which should be shipping soon after you read this. Check out our review this issue of **Videologic's** Apocalypse 3Dx which also uses PowerVR. It looks like Matrox's part will be 3D-only, though coupling it with Matrox's Mystique would make for a pretty dynamic duo.

For more on 3D iron this issue, check out our 3D graphics feature, where we'll show you which features do what, bring you up to speed on the latest 3D jargon, and give you the latest dish on the Direct3D vs. OpenGL skirmish.—Dave Sakarav

DRAGON DICE

Based on the popular TSR dice game, Dragon Dice is strategy gaming at its simplest. Gamers vie to control "territains" across the mythical land of Estah, marshaling armies of elves, dwarves, and goblins that are represented by—you guessed it—dice. Offering single scenario, campaign, and tournament play, Dragon Dice allows players to

customize their poly-hedral forces before squaring off against the computer

KINGDOM TO COME

Interactive Magic's Real-time Strategy Game Tries To Climb Above the Crowd

As we've seen in Microsoft's *Ace of Emires* (see the sneak preview in this issue), developers are taking real-time games in a more intelligent direction. One of the games that exemplifies this is Interactive Magic's new game, *Seven Kingdoms*.

You play as one of seven ancient civilizations (Greek, Chinese, Mayan, and the like), building an infrastructure, much as you do in other real-time strategy games. You also have to harvest resources and maintain a sizable army for defense and, if you choose, offense.

What we particularly like in this game is the use of each civilization's myths to flesh out the culture's repertoire of units. Each civilization can summon one godlike creature from its pantheon (the Chinese summon a dragon, the Norse summon

Thor), who bestows benefits upon their troops and is a controllable megalink.

The game will also emphasize multicultural cooperation, as in order to utilize each god, you have to have members of that god's race in your nation. Thus, the best players will welcome all the cultures into

one homogenous civilization, and summon all the gods to smile their foes.

Another great feature of the game is the espionage model and spy unit, which we'll reveal more of in next month's Real-Time Strategy Roundup, as well as in an upcoming preview—*Ediot Chin*.

Summon powerful creatures such as this Chinese dragon to assist your troops.

What, No Quake?

CGW recently attended the 1997 Shareware Industry Conference (SIC), in Providence, Rhode Island. While the conference's round tables always result in lively discussion about the shareware industry, the highlight of the event is the annual SIC Awards Ceremony. CGW presented the awards to the winners in each category. The results are as follows:

- Best Shareware Game:** *Quake*, by id Software
- Best Action Game:** *Quake*, by id Software
- Best Strategy/Logic Game:** *Fallen Heroes*, by A&B Entertainment
- Best Card/Casino Game:** *Drumac* GNG2, by SyberSyn
- Best Boardgame:** *Pho Backgammon*, by

WinGames, Inc.

For more information about the winners, check out our accompanying CD-ROM booklet (if you get the CD version of the mag). You'll find playable versions of all of these games on the CD-ROM...except for one. Despite the fact that *Quake* was clearly the star of the SIC awards, id Software absolutely refused to let us include the game on the CD. "It will interfere with the OEM sales," said id CEO, Todd Hollenshead. You call that shareware?—*Theray Nguyen*

or up to three friends. Though it's short on real depth and saddled with dorky graphics, *DogDay Dice* is surprisingly engaging. Its quick and easy gameplay might be enough to satisfy gamers hungry for strategy but short on time.—*Robert Coffey*

The Most Influential People in Computer Gaming

CGW and GameSpot recently decided to hold an internal ballot to find out just who the most influential people in this industry are. First we voted for the people

we felt had had the greatest influence over computer gaming since its nascence. Then, we voted on those people who we felt had accomplished the most for the industry

during 1996. To find out more about these pioneers and their contributions to gaming, point your browser to <http://cgw.gamespot.com/october>.

The 15 Most Influential People of All Time

1. **Sid Meier** for game design

(CIVILIZATION, COLONIZATION)

2. **John Carmack** for technology (QUAKE, DOOM, DOOM II)

3. **Richard Garriott** for design (ULTIMA series)

4. **Alexey Pajitnov** for TETRIS

5. **Nolan Bushnell** for Atari and Pong

6. **Brett Sperry** for game design (COMMAND & CONQUER, DUNE II)

7. **John Romero** for game design (QUAKE, DOOM, DOOM II)

8. **Miyamoto** for game design (DONKEY KONG and MARIO)

9. **Trip Hawkins** for inception of current software distribution model, affiliated labels, and the like

10. **Roberta Williams** for adventure game design (KING'S QUEST)

11. **Peter Molyneux** for game design (MAGIC CARPET, SYNDICATE)

12. **Will Crowther** and **Don Woods** for creating The Original Adventure games

13. **Alex St. John** for MS-Windows for gaming

14. **Scott Miller** for originating the shareware model

15. **Ron Gilbert** for inventing the SCUMM engine for adventure gaming

The 5 Most Influential People of 1996

1. **John Carmack** for 3D technology, QUAKE, and QUAKEWORLD Internet Play

2. **Gary Tavel** for architecture (and typing) of the 3Dfx chip

3. **Brett Sperry** for game design (RED ALERT)

4. **Erich Shaefer** and **Daniel Brevik** for game design (DUELLO)

5. **Andy Hollis** for game design (LONGBORN)

Deadly Diva

QUAKE 2's Babe Will Have Brains, Beauty, Brawn, and Balls

If you've been following the development of *Quake 2*, you're sure to have noticed a sexy, red-headed, long-legged honey strutting (and jiggling) her stuff across id's Web site. But if you think you're going to run into this leather-clad, BFG-wielding bombshell when you play *Quake 2*, think again.

The character currently up on the Web site is *Quake 2* artist Paul Steed's homage to the all-female *Quake* clan, CrackWhore. Steed is quick to state that he created this highly-characterized cartoon-like vixen just for fun, and she will not be the female player character in *Quake 2*. However, one of the monsters will be a Borg-like version of CrackWhore. Instead of that glorious mane of red hair, she'll have cables running through her body and protruding out of her scalp.

Although the real Q2 babe is in the early stages of development right now, Steed has a clear idea of

what he wants her to look like. For one thing, she won't be running around half-naked. Steed wants this character to be taken seriously, and despite what other developers seem to think, a female wearing three strategically-placed triangles as her only battle-armor is hardly realistic. Steed's femme fatale will be based on Private Vasquez, the super-tough marine from the movie *Alien*, and will be dressed in similar attire—a sleeveless vest and full-length pants. That's not to say she won't be feminine. This tough-girl will definitely boast womanly curves, but according to Steed, we can expect her proportions to be more realistic than those of the women we've seen in games so far. "She'll be very cool—attractive, yet tough," Steed says.

Steed stresses that *Quake 2* will be a far more visual experience than its predecessor. As you approach a character in a DeathMatch, for example, you'll clearly be able to distinguish if they're

male or female (the female character may even have a pony-tail to make identification easier). You'll also be able to tell which weapon they're carrying, and if they're wearing armor.

And how does Steed think his wondrous creation would fair if pitted against some of the other bimboettes out there? "She could shoot Lara Croft to bits," he proudly proclaims.—Charlotte Panther

Artist Paul Steed's homage to the female *Quake* clan, CrackWhore

Quake 2's female character will be based on *Alien*'s ultra-tough marine, Vasquez

Chicks With Boomsticks

Here's a look at some of the female characters we've seen and some we can expect to see over the next few months. Finally, more designers are realizing that a woman doesn't have to be naked to be sexy. If the *Demoniac* *Duke* women are anything to go by, it seems that Eidos still has a lot to learn. Nonetheless, we did hear that Lara Croft will be wrapping up in a jacket during certain parts of *Tomb Raider 2*, and we'll also see her donning a wet-suit (see picture). Nikki and Amy from SegaSoft's *Violence* appear to be pretty tough cookies (despite the bare midriff factor). But if we had to choose one character to play, it would be *Duke*'s Rogue. This babe gets tougher and tougher as the game progresses, and instead of taking her clothes off, she pils the armor on. Now that's refreshing.—Charlotte Panther

- 1) *TOMB RAIDER 2*'s Lara Croft
- 2) *DIABLO*'s Rogue
- 3) Muri Purren's Lotus Abstraction

COMPUTER GAME

AD & D + DESCENT[™] AN UNBEATABLE COMBINATION

The AD&D game's most famous world, the *FORGOTTEN REALMS*[®] setting, is now powered by the award-winning *Descent* engine.

INTRODUCING DESCENT TO UNDERMOUNTAIN, THE MOST REVOLUTIONARY NEW AD&D FORGOTTEN REALMS COMPUTER GAME EVER. BASED ON AN ENHANCED, SVGA VERSION OF THE AWARD-WINNING DESCENT ENGINE, YOU ARE CHALLENGED TO BUILD AN AUTHENTIC AD&D CHARACTER AND PLUNGE DEEP INTO UNDERMOUNTAIN — A TWISTING DUNGEON LABYRINTH LOCATED BENEATH THE CITY OF WATERDEEP. HERE YOU WILL ENCOUNTER AN INCREDIBLE 360° WORLD FILLED WITH SHADY HALLS, ANCIENT CRYPTS AND ABANDONED TEMPLES — NOT TO MENTION A TERRIFYING ASSORTMENT OF CREATURES WHO CALL UNDERMOUNTAIN THEIR HOME. SOLVE THE RIDDLE OF UNDERMOUNTAIN AND YOU WILL CERTAINLY AMASS A PILE OF GOLD. FAIL AND YOU WILL BECOME A MERE PILE OF BONES.

EITHER WAY, YOU'RE GOING DOWN LIKE NEVER BEFORE.

DESCENT TO
UNDERMOUNTAIN[™]

FORGOTTEN REALMS

SETTING

- 1 Experience more than 25 different levels that come alive in full 3D 360° detail, from a dwarven temple to an ancient Egyptian crypt.
- 2 Build your character using true AD&D role-playing elements — 6 different races and single or multi-classed options. Your choice of character class leads to unique abilities and will also affect the way the game plays — if you choose a thief character you can climb walls!
- 3 Battle more than 50 different 3D monsters — skeletons, mummies, giant insects and more...
- 4 Seek out and utilize more than 160 magical items and 40 different spells, including the powerful magic missile that homes in on its targets and the fireball that engulfs its target in a shroud of flames!

Going Postal

Ripcord Productions To Unleash a Bloody Flurry of Action on the Gaming World

Ripcord is the name of the startup game-publishing arm of Panasonic Entertainment. Now, that's the last you'll hear of Ripcord's connection to Panasonic in these pages, because Ripcord is definitely trying to deliver gamers' games to the public. The first will be *Postal*, an intense action shooter from developer Running With Scissors.

In *Postal*, you play a gun-toting psycho who is on a rampage to destroy all the wackos and evil-doers of a town gone mad. The look is similar to *Crusader*, with lots of objects to destroy and wreck, and plenty of special effects, such as blood tracks in the snow, adding to the gritty atmosphere. Running With Scissors promises plenty of nasty weaponry, including rocket launchers and flame throwers, as well as crafty level design and swarms of enemies.

You'll also discover, as you play through the game, that the initial premise is questionable

You'll start to wonder who's really going mad: is it the whole world or you? But before you find out, you'll have to blow everyone away.

The game should come with a robust editor that will allow players to make levels as well-done as the designers'. Look out for *Postal* sometime in September. —EWOT Chin

Dilbert's Desktop Distractions

Feeling overworked, under-appreciated, and severely underpaid? Spend some time with Dilbert, the world's most put-upon employee, and you'll learn a few important lessons about survival in the work place. Rule number one? Do as little work as possible while giving off the impression that you do more than anyone else in the office. To help you fulfill your goal, DreamWorks Interactive has created *Dilbert's Desktop Games*, a collection of 10 games and activities specifically designed to decrease productivity as we know it.

Games include *Rechno Raiders*, a platform-style game in which Dilbert must collect donuts and gadgets on his way up the corporate elevator... or... ladder. There's *Project Pass-Out*, a loo-ball-type game, in which Dilbert and Zimbo the Monkey try to snare good projects as they fall onto the conference table, and pass the bad ones off to each other. Relieve frustration with the *Can-O-Matic 2*, a machine that allows you to shoot fellow employees at targets. And then there's *CEO Simulator*, a chance for players to build their own

Daily Grind: Dilbert's daunting task is to pick up as many donuts as possible.

company from the ground up, nurturing it and providing it with the same sort of care and attention that one would give a pet dog.

Dilbert's Desktop Games will begin its destruction of the workplace in October

e-parcel Provides a Smart Solution to Your Download Nightmares

You hear there's a new add-on pack available on the Internet for a game you're playing, but you're reluctant to download it because you know it will tie up your computer for hours. Sound familiar? Well, e-parcel, an Internet delivery service, has developed SmartLoad, a product that will securely deliver electronic parcels of any type or size to your desktop without slowing down the other running desktop applications. The software also boasts crash-resistant capabilities, so that if a disconnection occurs while downloading, SmartLoad will recommence and complete the transmission at the point of interruption, instead of having to start over.

Once a file has been deposited on the user's desktop, it can be viewed simply by clicking the SmartLoad icon. SmartLoad is currently available for Windows 95 and NT 4.0. For more information, check out www.e-parcel.com. —Charlotte Panther

GEAR UP YOUR WAY

HEAVY GEAR Offers Full Constructability

The advantage to licensing a pen and paper game universe, as opposed to creating one from whole cloth, is that the pen and paper game has thousands of hours of free playtesting (actual gaming done by satisfied customers) behind it. When you implement those rules, along with the inevitable clarifications that occur as gamers identify potential problems in the rule sets, you have confidence that the game will be well play-balanced. You also know what the aficionados of the game universe like and don't like.

Faced with recreating the Heavy Gear universe, Activision quickly recognized that a new computer game would not have the elegance of the Heavy Gear rules if it did not feature full constructability. MechWarrior 2 had some of this with the Mech Lab, but it was not nearly as robust and full-featured as it would need to be to reflect Heavy Gear's universe. Why? Because Heavy Gear is supposed to reflect Gear technology that is constantly being designed, built, and refined by the denizens of its universe. The BattleTech universe, on the other hand, is made from lostech-scavenged technology that is imitated and evolves much more slowly.

As a result, everything about the gears in Heavy Gear is supposed to be customizable. The Activision team's goal is to allow you to change powerplants, weaponry, and armor almost transparently by using the click and drag technology of the construction module. Instead of merely retrofitting new weaponry

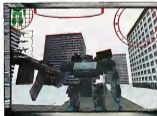

Activision's HEAVY GEAR Allows you to Construct the Robot of Your Dreams

and armor onto the same old hulks, you'll now have a chance to create your dream killing machine by keeping in mind the trade-offs between speed and power. Anything you can build according to the pen and paper rules, you should be able to build in the Activision game —Johnny Wilson

It's About Time

Realtime Takes a Leap Forward With Microsoft's Civ-style Strategy Game

by Elliott Chin

Critics often charge that real-time strategy games have no depth; that victory in an RTS comes down to who clicks fastest. I've always thought it comes down to who thinks fastest, a truth that probably hurts for all those who fail in real-time wargaming. However, when it comes to the depth of current real-time games, there is some truth to the notion that what we've been playing so far isn't as rich or complex as turn-based legends like *Master of Magic* and *Civilization* (even my favorite real-time game, *WarCraft II*, though incredibly complex, lacks the depth of *Civ*). Well, no less than the cocreator of *Civilization*, Bruce Shelley, will soon be taking a step toward changing that situation. With his next game, *Age of Empires*, and his codesigners at Ensemble Studios are

taking real-time games to a new level of sophistication and complexity.

BEST OF BOTH WORLDS

At its most basic level, *Age of Empires* can be considered a cross between *Civilization* and *WarCraft II*. You can play as one of twelve ancient civilizations as you vie for supremacy, battling it out in frantic

WarCraft-like ferocity or advancing through economy and production, as in *Civilization*.

The game has an isometric look to it and gorgeously rendered graphics that are similar to *Civ II*'s, though sharper and more colorful. However, the units in *Age* move with uncanny realism, the animation for the villagers, troops, and even wildlife in the game are fluid and precise. You'll see woodcutters heft their heavy axes over their heads with mighty effort as they fell large trees, and hunters return to town weighed down by heavy game coddled in their arms.

The controls are very much like those for *WarCraft II*, as *Age* uses a right-click interface for issuing commands. However, like many of the real-time games under development, it offers more flexible user commands, such as saving groups (like in *Command & Conquer*), having hot keys for buildings and commands, and issuing waypoints for unit movement.

AGE OF DISCOVERY

I liken *Age to Civilization* because of its emphasis on discovery and research. Unlike many real-time games, *Age of Empires* requires you to advance your civilization through various ages of discovery: You begin in the Stone Age, but can move on to the Tool, the Bronze, and, finally, the Iron Age. Each age offers a new collection of structures to build, weapons and instruments to acquire, technologies to research, and units to train. To advance to a succeeding age, your civilization needs to be well established in your current age, with a surplus of food and an economy to support the transition to a new era of growth. In game terms, this means you have to build a certain number of structures and

SMART GAMES *Age of Empires* has an intelligence and complexity that's been missing from real-time games thus far. You do things that make sense for a growing civilization, like researching, farming, and hunting.

accumulate lots of resources before you can "research" the next age.

As in *WarCraft II*, the gameplay in *Age* hinges on a single support unit. In *WarCraft II*, it is the peon/peasant. In *Age*, it is the villager, whom you use for hunting and foraging food, mining gold and stone, and chopping wood. He is also used to build structures, as well as to provide reconnaissance in the early parts of the game.

BY ANY MEANS NECESSARY

Warfare is indeed a significant part of this game, but *Age* is distinguished from the real-time crowd in that victory and survival are not ensured by military might alone. Many of the upgrades you can research, and many of the technologies you can acquire through your science, are of economic and industrial value. For instance, you can learn and build a market in the Tool Age, which gives you the ability to learn woodworking, domestication, and stone and gold mining, all of which are economic benefits that increase resource gathering. You can research the wheel to increase travel speed for troops and villagers, build merchant ships in order to trade with your neighbors, and train priests to convert enemy troops to your side.

My worry when I first played *Age of Empires* was that the campaign would be open-ended, as was the case with *Civilization* and *Demolition*. With *Civilization*, that open-endedness works, because there is so much to do that the game doesn't end too quickly. But with *Demolition*, ending too quickly is exactly what happens, and gamers complained that the game was simply too limited. Thankfully, Ensemble Studios recognizes that there isn't enough to do in an open-ended game of *Age*.

THE GREAT MARCH In addition to ideal multiplayer, *Age* will have a good single-player component as well, including four well-done campaigns.

to make it enough of a single-player challenge. So, they will include four campaigns in the game. As in *WarCraft II*, the scenarios in the campaigns will slowly introduce you to the game, with increasingly difficult scenario victory conditions. Once you've graduated from the beginner campaign, you can play the other three campaigns, which provide different sets of challenges. *Age of Empires* will also have many historical and hypothetical one-shot scenarios.

MANY HUMAN EMPIRES

Clearly, the designers put much thought into multiplayer gaming, and *Age of Empires* shows great potential as a multiplayer product. There is a good balance between what you can and can't do; for example, there isn't so much that games will take forever (as is the case with *MOO2*), but there is still enough to do that you feel as if you are getting the same intelligence and complexity of gameplay as in *Civilization*, except in real time.

You can achieve victory in multiplayer simply by conquering your enemies, but you can also win games through religion, exploration, research, or production. Peppered about the gaming map will be Stonehenge-like religious sites. The first civilization to claim all of them on the map, and hold them for a certain amount of time, wins. There are also artifacts in the game that bestow victory upon the first civilization that gains and holds all of them. You can also win by researching all of your technology before everyone else exhausts their research tree, or by being the first to build a Wonder and sustain it for 2,000 years (roughly 2,000 seconds).

As I played *Age of Empires*, I got a good overview of the gameplay and the direction in which Ensemble Studios is heading. I wasn't able to play against final AI, so I can't comment on how intelligent your troops or the enemy civilization will be in the final version. Ensemble says, though, that your own units will be intelligent enough to look for food and wood on their own if you leave them alone. If the AI is smarter than the usual paltry fare we get in typical real-time games, and if the Internet play is seamless and smooth over Microsoft's Internet Gaming Zone, then *Age of Empires* could secure a coveted spot on both the traditional strategy gamer's and real-time fanatic's must-play list.

The Resource Game

AGE OF EMPIRES, the most real-time strategy games for you to harvest. The great thing about *Age*, unlike the rest of the real-time pack, is that these resources make absolute sense. You're not looking for a fictional ore or water or energy source. This is the dawn of civilization, and the resources you have to gather are the same ones that early man had to acquire: food, wood, stone, and gold.

In the first age, you hunt and forage, but if you advance to an age beyond stone, you will gain the ability to build farms, which are a self-replenishing food supply. I thought this dynamic (of hunting and foraging, then learning self-sufficiency) was brilliant, because it

LABOR FORCE The villager is your civilization's backbone, whether he's hunting or farming for food.

chopping wood.

or mining for stone.

...or gold.

created the sense that you were following in the footsteps of early man. The food is, logically, used for "building" new units.

The other resources are wood, which you need to harvest in abundance for buildings in the Stone and Tool Ages; stone, which has a like use in the Tool and Bronze Ages; and gold, which is a necessity in the Iron Age, since by then man's economy thrives on money and not such barbaric currencies as meat and wood.

Defiant Departure

Avalon Hill's Next Game Will Surprise Longtime Fans

by Thierry Nguyen

Avalon Hill has a long background in making both boardgames and hard-core wargames. Mentioning the company's name conjures up titles like *Wooden Ships & Iron Men*, *Achtung: Spitzke*, *Over the Reich*, and *CaveWars*. So what will gamers think when they hear the name *Defiance*? Is it a hard-core strategy game that entails playing a rebellious state or power? Well, die-hard strategy gamers will be surprised to know that *Defiance* is not the title of Avalon Hill's next strategy game, it's the title of their next action game. Action fans, take notice.

PILOT? WHERE?

Defiance is the first game from the new action division of Avalon Hill: Visceral Productions. It's an attempt to merge the action of *Descent* with the storyline of *Wing Commander*. The game starts with you being called to a secret military research center. On arrival, you are told to test a new type of craft

that will revolutionize the way combat is carried out. Sure enough, you're having fun blowing away drones in your LAW-6 Saber gunship, when the base suddenly comes under attack. As you battle hostile biomechanical creatures, you realize that you are probably the only survivor on the base.

Now, the plot could easily end there. Go play with the new toy, kill the aliens, win the game. But Visceral wants to meld the action with a good storyline. So, through various voice-overs and cut-scenes, you learn about a scientist who was working on biomechanical weapons and suffered a funding cut. Is this tale of a scientist gone postal the cause of the massive attack? Or is there more?

DESCENT INTO DEFIANCE

In terms of actual gameplay, *Defiance* is a lot like *Descent*. You'll pilot a ship around 3D levels and blast all sorts of enemies. Unlike *Descent*, your ship doesn't naturally defy gravity, so you will have to use your lifts and maneuvering jets in order to access areas higher than you. The version I played had only four guns, four types of missiles, and one level, but Visceral promises a greater variety of weapons and at

NOON SHOT These biomechanical creatures will be your main enemies in *Defiance*.

least 13 large levels featuring areas such as canyons and cliffs.

The graphics of the game look decent, but Visceral says the engine is still in development, and that they plan to have MMX and 3D card support. Whether they go for Direct3D or card-specific support is still up in the air, but as it stands, the beta I played looked only slightly better than *Descent II*. Hopefully the art for the other levels and the added support will make the game look more contemporary.

So, did Avalon Hill's sudden shift in game development help? That can't be judged until the game ships, but for now, it looks to be a good first entry. If they manage to pull off adding a good story to go along with the decent action, they could have a solid game on their hands. And maybe Avalon Hill will be known for both turn-based hex-filled patience and real-time 3D frenzies. ☺

LEVEL-HEADED It's hoped that Visceral will include their level editor when *Defiance* is released, as extensibility would dramatically enhance the game's replay value.

Battling Clouds

Activision's Online Game of Sky Warfare Could Be a Real-time Sleeper

by Martin E. Cirulis

Well, Activision must be listening to somebody out there. Their newest offering to the online community is squarely aimed at giving the whos back to hardcore strategy types—without making them go through the social gymnastics required to keep eight people together through games that last for 20 hours. *NerfStorm* may not blow the socks off the action crowd, but it does contain many features that have been a long time coming.

WAR WEATHER

This game takes a few risks in order to be original. The premise is not the usual fantasy fare. Instead of another freight between Tolkien rejects, *NS* offers us a chaotic realm without solid land, where most of our preconceptions are turned upside down and magical priests battle each other using floating islands as their operational bases.

The only island maneuvering one does is in choosing your opponents online, a process that uses a unique graphic interface, doing away with that endless chat-room jockeying we have been plagued with so far. Once you get down to the ugly business of war, you discover that things are quite different. In typical real-time gaming, base building is a means to unit production. In *NerfStorm*, though, building is an end in itself, and there are very few movable units in the game at all. Oddly enough, those of you with experience in those old pipe-puzzle games will have the greatest initial advantage in *NS*, as you must build bridges using puzzle pieces to cross the gaps between islands and power sources.

These pieces are also used to set up a support web to place the keys to any successful battle, the 30-odd structures that do everything from collect power to blast your enemies from the skies. Instead of producing units per se, these structures function automatically in both offensive and defensive mode and have to be

deployed across the skies in almost chesslike fashion in order to engage and destroy your opponents. The object of the game is to protect your own island while laying siege to enemy islands and blasting opposing high priests senseless. Once you have a high priest paralyzed, one of your transport units, the only class of directable mobile units in the game, can be ordered to drag the prisoner back to your island for the grisly victory

ceremony. In perhaps the darkest abstraction of research I have seen in a long time, the only way to gain new knowledge, and thus more structures to build, is to sacrifice captured priests to the Storm Furies.

A NEW DAWN

NerfStorm will have a wide variety of innovative online options, including the built-in ability to flag other players as "friends," so you can find them quickly and easily when you link to the server. A sense of attachment will also be included in the game, as your islands will grow along with you in an almost RPG-like way. Lastly, *NerfStorm* will offer a full single-player campaign for sharpening your skills.

DUELING ISLANDS Rather than requiring micromanagement of units, most of the game's combat involves strategically placing stationary weapons platforms.

MAIN HAN The point of *NerfStorm* is to capture rival priests and take their knowledge by sacrificing them to the gods in a grisly ceremony.

While gamers used to fluid games where everything is in motion may have a few initial problems adjusting to the pace of *NerfStorm*, those with the patience to recognize a deep tactical game when they see one will be glad they put the time into it. It remains to be seen whether *NerfStorm* can be a truly satisfying single-player game, but it is already easy to see that online gamers may never look at a storm-cloud the same way again. ☸

Smoke and Mirrors

Revolution's New Adventure Has Some Tricks up Its Sleeve

by Thierry Nguyen

Virgin was one of the few companies in recent memory to release a traditional graphic adventure in a market dominated by Mysteries and full motion video titles. Revolution's *CIRCLE OF BLOOD* (known as *BROKEN SWORD*).

SHADOW OF THE TEMPLARS in the UK) not only had gorgeous animation and background art, but it also possessed a tight and intriguing story that was filled with irony and historical/mythological accuracy. *BROKEN SWORD: THE SMOKING MIRROR*, the next episode in the series, promises an equally compelling story underneath a refined interface.

NOT JUST A SEQUEL

Project Director Charles Cecil insists that the game isn't a mere sequel that just refreshes the old engine and characters but, rather, a new episode that retains certain characters while improving numerous design elements. The interface has been tweaked (many of the icons are now consolidated into one universal icon, similar to what LucasArts did in *THE DIO*) and the overall graphic quality of the game is improved. While the new graphic effects such as translucency, shadows, and lighting will need a fast machine with the latest DirectX drivers, the engine will scale itself appropriately in play, so you can still play the game using DirectX 2.0 with 6MB of RAM.

In this episode, familiar characters such as George, Nico, and various supporting cast members (such as André Lobineau and the gendarme in the café in Montauque) return, and you'll find the same attention to historical detail and mythic lore. The focus of the first game was the Knights Templar; this time it's the Mayan Indian culture. The plot has George and Nico running around locales like Paris, Marseille, Quasimodo (a fictional South American city), and the Caribbean in order to find artifacts that will prevent the return of

Tzatzilpoca, a vengeful Mayan god who will bring about the apocalypse predicted in Mayan folklore.

MEANWHILE...

Many elements of the game have been fine-tuned. Graphic backgrounds are multilayered, giving scenes more visual depth. The amount of dialogue has been halved (while still maintaining the strong story), addressing the criticism that the previous game was entirely too "talkative."

Nico is much more involved in this game. The previous game cast her in a filler role, in which she provided some information, but didn't do much else. Here, not only do you need her help in some of the puzzles, but you actually get to play her character. At certain points in the game, you'll switch between playing George and playing Nico. What's interesting is that Nico ends up embarking on the more dangerous quest, while George looks for puzzles in the Caribbean, a nice change from the tired "guy does macho, danger-filled quest while girl does thinking quest" motif.

Look for more danger and less mindless clicking when solving puzzles in this game. Cecil explained that the team grew tired of the "try every inventory object on every item" type of puzzle, and while puzzles like that exist still, they aren't the focus of the game. Some puzzles are dangerous, in that they require quick thinking in a limited time span, which can result in either victory or death.

Virgin's next foray into graphic adventure looks quite promising. *CIRCLE OF BLOOD* was already an excellent game, and *BROKEN SWORD: THE SMOKING MIRROR* looks as if it will be one of the better traditional adventure games this year.

JE SUIS UN WIMP Characters such as ex-boyfriend André Lobineau (at far right) return for a second go at adventure.

FULL MOON TONIGHT The background art in this game is even more stunning than in *CIRCLE OF BLOOD*, with multiple layers that give a better sense of depth and space.

A Legend in the Making

Accolade Brings Gridiron Heroes to Life

by Terry Coleman

Vince Lombardi's Green Bay Packers are used to dealing with adversity, from holdouts in training camp to injuries involving key players. But nothing has prepared them for this difficult season.

Bewildered by the 49ers' West Coast offense, the Pack suffers three Young to Rice TD passes in the first half and loses on opening day at 3Com Park (all the while, Lombardi mutters, "I thought we were playing at Candlestick"). After winning a squeaker against Joe Namath's Jets, Green Bay falls to the leather helmet-clad Chicago Bears, as Red Grange scores 24 points. But this week will be different, says star halfback Paul Hornung, because the cheeseheads will be out in force at the frozen tundra of Lambeau Field for the homecoming game against their most hated rival, the 1950 Cleveland Browns.

A PIGSKIN DREAM COME TRUE

Who says fantasy has to be restricted to overly muscled guys with swords; fairies; and women with improbable cleavage? Sports fans have always argued whether Man o' War could have passed Secretariat down the stretch at Churchill Downs, or whether Muhammad Ali would last 15 rounds with Rocky Marciano. For football fans, the wide variety of rules and equipment changes over several decades have made it difficult to compare great teams from different eras.

Now, NFL Legends '98 changes all that, as it lets you play the greatest teams of all time in

an action-oriented, but still very realistic, setting. The game focuses on teams from four critical years of professional football.

In 1928, there are no facemasks, and leather helmets are all the rage.

In 1950, the NFL still uses a larger football than that of today, but the ball is now moved in from the sidelines to the interior hash marks.

In 1968, both the AFL and NFL have opened up the passing game, although "bump-and-run" coverage is still allowed.

In 1997, 2-point conversions and kickoffs from the 30-yard line change the game even more.

NFL Legends '98 may be a fantasy, but it's rooted in solid research, which makes it feel far more realistic than other action-oriented games such as Madden, or NBA Live.

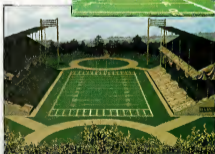

Football, you see, is won and lost in the trenches, and Legends has the best dynamics of offensive versus defensive line play yet seen on the computer. A 300-pound guard like the Cowboys' Larry Allen will blow smaller players from the 1930s off the ball in the first quarter, just as you'd expect. But since the players from yes-

ALL-TIME MATCHUPS Call me cynical, but I suspect that the Buffalo Bills' Super Bowl woes will continue, even when they're playing the Canton Bulldogs.

teryear were accustomed to playing nearly every snap on both offense and defense, their adjusted fatigue levels allow them to run circles around modern athletes as the game clock winds down.

The potential player matchups are mind-boggling. Who can resist sending Benito Nagurski into the heart of the 1997 Pittsburgh

FIELDS OF GREEN From the timeworn grass of Soldier Field to the AstroTurf of Texas Stadium, Legends gives you a monopoly on historic football fields.

CIRCLE READER SERVICE #136

Famous Teams Featured In NFL LEGENDS '98

1956 Green Bay Packers

More months removed from their second consecutive Super Bowl win, the mighty Packers are a team at a crossroads. The nucleus of the team, including Hall-of-Famers Bart Starr, Carroll Dale, and Paul Hornung, is past its prime. Can you find the right mix of veterans and rookies to do what even coach Vince Lombardi couldn't—win a third consecutive Super Bowl?

1960 Miami Dolphins

This young, talented group would become the only undefeated team in NFL history in 1972. The quintsensational ball-control team, led by Bob Griese's passing and the running of Mercury Morris and Larry Csonka, the Dolphins scored the most and gave up the fewest points in the league two years running. Think you can beat Don Shula's timetable for an AFC dynasty for four years? Better work on that No-name Defense.

1950 Los Angeles Rams

Formerly the Cleveland Rams (what is it with teams leaving that locality?), this team found tremendous success on the West Coast, with attendance figures of more than 60,000 per game. Here you have not one, but two Hall-of-Fame quarterbacks, Bob Waterfield and Norm Van Brocklin, throwing to Crazy Legs Hirsch and Tom Fears. This is one of the great aerial attacks in football history.

1950 Kansas City Chiefs

After having the best record in the AFL during the regular season, the Chiefs lost in the '66 playoffs, only to win the Super Bowl the following year. From QB Len Dawson and linebacker

Steelers' defense? Can Roy Akman's confidence hold up after being intercepted by Dick "Night Train" Lane? Will Barry Sanders frustrate defenders from the fifties just as he does those of the modern era? How well will Bob Griese's famed "computer brain" be able to decipher modern defenses with their conspicuous of zone blitzes? Just imagine the numbers that Otto Graham could put up passing from the Run-and-Shoot offense....

When you match up teams from different eras, a key consideration is deciding in which era to play. A pampered quarterback from the '90s, for example, won't do you much good on a '30s roster, since you are allowed only 20 players on your entire team and playing both sides of the ball is mandatory. Still, certain modern players, such as the Bills' lightning-quick defensive end Bruce Smith, are so talented that they would likely thrive even in the days of Knute Rockne. Whomever you decide to coach, the main limit is your imagination; it's as if you have the entire Pro Football Hall of Fame on your desktop.

BLITZ WITH A BUTTON

The interface is tailor-made for a gamepad. If you are using a Gravis pad, your receivers are color-coded according to whether they are the primary, secondary, or tertiary receiver in the pass pattern—an elegant way to simulate the quarterback "checking off" each receiver. Accolade plans to support Direct Input and daisy-chaining for Microsoft gamepads as well.

Calling audibles at the line of scrimmage is similarly easy, as you can designate up to four different offensive and defensive plays. While

this system lacks the intricate versatility of ABC Monday Night Football, it works well in practice. How many different audibles are you going to call from a given formation, anyway?

Finally, taking a cue from Sega's venerable Front Page Sports line, NFL Legends '98 sup ports multiple camera angles. You can spin or rotate the camera, adjust the zoom levels and even the tilt—all with a handful of hot keys.

THAT CHAMPIONSHIP SEASON

Right now, the season-long simulation aspects of Legends are at least equal to its competitors. The preseason draft, for example, is tailored to the era in which you are playing. In a big departure from earlier football games, you can trade players for future draft picks, which makes multi-season leagues really competitive. Because the statistical base is really integrated into the game design, season ending stats have the right feel. In Legends, you don't have superhuman scoring, as opposed to say, NBA LIVE, where even poor teams routinely score 120 points in a regulation game.

It's hard to imagine who wouldn't enjoy NFL Legends '98. Both console and PC gamers alike will enjoy the blend of fast action and gritty gridiron feel. Those who wish to play Legends just for its realistic aspects will appreciate the coach-only mode, already a cut above recent editions of FPS: Football, in addition to robust solo play, you can suit up your players for gridiron wars against another human coach via modem, serial connection, LAN, or TCP/IP. Fresh and fulfilling, Legends is one of those rare game designs that transcends its genre. This promises to be not just one of the best sports games of the year, but one of the best games of the year overall. **S**

Willie Lanier to long-range kicker Jan Stenrud, this was not just the best of the old AFL teams, but one of the best ever in pro football.

1932 Chicago Bears

This team is to pro football what Babe Ruth's Yankees were to baseball, with almost too many stars to count: Red Grange, Bronko Nagurski, Beattie Phathers (the first documented 1,000-yard rusher)—the list goes on and on. What's really scary is that these guys performed at such a superior level while playing both offense and

defense. Can you imagine Don Marino or Emmitt Smith doing that today?

1950 New York Giants

For the entire decade of the fifties, New York had only one losing season and played in three championship games. One of the all-time great running teams, lead by all-purpose back Frank Gifford, the Giants match up better versus modern teams than you might think. And their uniforms haven't changed much in a half-century, either.

COVER STORY

WING COMMANDER: PROPHECY

PROPHECY MOTIVE

*The Fifth Game in the Wing
COMMANDER Series Warps
Back to Its Action Roots*

W

ING COMMANDER is the most successful space sim series—both commercially and critically—yet created for the PC. Each Wing

COMMANDER game in turn has pushed the available technology to the point that it nearly snapped, and later games in the series form the only “interactive movies” worthy of the name. At least through Wing COMMANDER III, the increasingly multimillion-dollar budgets translated directly into enhanced gameplay. And with the advent of DVD, even Wing COMMANDER IV (sometimes called Wing COMMANDER 3 1/2 by gamers disappointed at its use of the same game engine as VIC II) has received a new lease on life (see the side bar on DVD).

Now comes the turning point. Series founder Chris Roberts has gone to form his own company, Digital Anvil. And while Roberts’ excesses (especially monetary ones) were often pointed out by his detractors, it’s a fair question to ask whether Wing

by Terry Coleman

COMMANDER will be the same without him. Like most questions in the real world, the answer is both yes and no. *Wing Commander: Prophecy* is not merely the fifth in the long-running series. It is a game that turns the *Wing Commander* universe on its Arthurian ear, and in the process, completely reinvents the space simulator genre.

Big Bang Redux

Lead designer Billy Cain, like the rest of the *Prophecy* team, was respectful of Clive Roberts' accomplishments, but felt it was time for a fresh start. "My background is in action games," Cain says. "I cut my teeth on consoles. *Wing Commander* was the first game that I really thought just rocked on the computer. When I look back at *Wing Commander II*, for instance, there was this really cool plotline—a cinematic feel even with the limited technology they had back then—but all the missions were great in and of themselves. What we wanted to do was to take the ideals of *Wing Commander I* and *II* and combine that with the cinematics and technology from *Wing III* and *IV*."

So, the design team took "Gameplay is number one" as their mantra and designed all of the space-fight missions first. They then sat down with the director and producer to hammer out a script to be filmed that would reflect the gameplay—almost the exact opposite of how *Wing IV* was designed. And, mindful that they have left some gamers behind the technology curve in earlier *Wing Commanders*,

Prophecy's design team is trying hard to offer a rich gaming experience on several levels. 3D accelerators are supported through Microsoft's Direct3D API and also have native support for 3DIX (and possibly other cards as well). Those without a 3D card will find that Origin's software engine provides a surprisingly high frame rate, even with more than 65,000 colors and a more than adequate range of

NOT JUST SPACE DUST Asteroids are back with a vengeance in *Prophecy*—and they look even more threatening when viewed with 3D accelerator cards

shading and textures. Of course, if you have the latest Pentium 233, *Prophecy* has plenty of bells and whistles to give you maximum bang for the buck: rotating pods on larger ships, tiny particles in explosions, even vapor trails that stop just short of being over-the-top. It's tough to be all things to all gamers, but *Prophecy* looks to bridge the hardware gap better than most.

"By losing the multiple-choice responses and going to a specific cinematic where what you see is based on how well you perform in the game, we've achieved a certain clarity."

—Adam Foshko, Movie Director

INSIDE THE INNER SANCTUM: Director Adam Foshko (left) and Lead Designer Billy Cain work in the Prophecy War Room.

Villains, Knock Off All That Evil!

Wings Commanders IV suffered from, among other things, a lack of good villains. Thus, the time would seem ripe for a comeback by those bad kitties we

all love to hate, the Kikrathi. And indeed, it appears that they are poised to return with a vengeance. The Confederation has issued warnings of a fully decked-out Kikrathi battle armada, ready to sail. But on your arrival you discover that the Kikrathi were brutally decimated; the fleet has been destroyed, and all you find are lifeless hulks drifting in space.

Obviously, whatever took out a fully primed Kikrathi invasion fleet—leaving no casualties of its own—is something that seriously compromises Confederation security. The game thus begins to unfold in the manner of a taut mystery, as you gather intelligence about your alien foe. What you find (without giving away too many secrets) is a race so terrible that it makes the Kikrathi look like household pets.

The design team went to a lot of trouble making the aliens look totally different from any race yet portrayed in the Wings Commanders universe, even eliciting the aid of Syd Mead (of Blade Runner fame) as a consultant. The end result is a rich, organic look for the alien ships—sort of a *Babylon 5*-meets-*Star Trek* motif.

The design involves more than eye candy, however. Owing to their organic design, the alien vessels have special capabilities. Imagine the surprise of a Confederation pilot when the three small alien vessels approaching his squadron suddenly combine into one craft—especially when the newly formed vessel has more firepower than its three constituent parts!

If that isn't enough, try piloting over one of the alien capital ships. These behemoths require that you take out a ship's systems one at a time—no more launching a single point-blank torpedo and flying back for the medal ceremony. As a result, you might be required to fly multiple missions to take out one capital ship. The sheer volume of these vessels—some over three kilome-

MORE LIGHTS, MORE SOUND, MORE ACTION Even in this early state, *Prophecy* shows a lot of improvements over *Wings IV*. Check out the prowling engines on the Confederation Vampire (top), the opening octopus arms on the secret Alien vessel (center), and the clean "no cockpit" HUD and multicolored explosion (bottom). And with the Dolby Pro Logic Surround sound, in space you can hear your scream—from any angle.

As long—as to be seen to be believed. It takes a long time just to fly past one of these monsters. In comparison, the *Star Wars* Death Star would look like a PT boat in the wake of a battleship.

The Minimalist Approach

Certain *Wing Commander* tactics have been changed for *Prophecy*. You won't have to jump back to the rear and side turrets on your torpedo bomber, because the AI takes care of all that now. A lot of your choice as to which fighter to fly has been taken away. This is a step backward, but according to Billy Cain, it's a step back to better gameplay: "It's the *Wings* I paradigm. If we know what ship you (and your wingman) are in, we can design the mission to take advantage of that. Our goal is to make every mission unique, as alive and vibrant as we can."

Likewise, your ability to choose your wingman has been curtailed. If you chose to always fly with Maric, for example, and you had a pivotal scene with another character, you wouldn't have any investment in that character (simply because you would never have gotten around to flying with him). The result would be a flat scene, something the *Prophecy* team is determined to avoid. They have a point. If you think back, the defining moments of the *Wing Commanders* have generally occurred when losing a companion, such as when Spirit sacrificed herself in *Wings II*. It's also justifiable from a gameplay standpoint, since you no longer portray Colonel Blair, you wouldn't have the authority to make personnel decisions.

So, in this new chapter of *Wing Commander*, you become Casey, the latest hotshot Contel pilot. It's almost like starting back at *Wings I*. Any lingering feeling of déjà vu is limited, however, by the fact that

A Wing Commander Retrospective

Chris Roberts' dream was to recreate the scintillating combat scenes from movies like *Star Wars* on the computer screen. When those plans fell through, Roberts came up with *The War Against the Khrishi*, a grand struggle truly worthy of an epic trilogy. The *Wing Commander* series began with

blimped vessels that look creaky indeed when matched up against the sleek vessels of later space-flight games. Even so, gamers braved the MCGA-graphics galaxies in their jaggedly polygonal craft to take on increasingly ferocious feline foes, simply because there wasn't any game remotely like WC. And just as the Confederation scientists added new technological marvels in the game, so did Origin continue to push the hot hardware of the day. The series hyperequipped to true VGA graphics, then SVGA graphics, and simply by putting wingman voiceovers in the cockpit, made Sound Blaster into the default technology for "subspace communications" in the gaming universe.

Yet Chris Roberts' greatest legacy wasn't an array of technical achievements. The secret of *Wing Commander's* success is that it was the first action-oriented PC game to involve us with the characters. From the "hot washup" scenes in the bar of the Tiger's Claw during *Wing Commander*, to the elaborately staged film clips of *Wing Commander IV*, the cut-scenes were truly cinematic (and a welcome break from wrist-wracking action). The designers made sure that we knew why Vagabond was obsessed with playing cards, or how honor was more than a word to Spirit. As a result, your wingman felt like characters in an RPG, rather than just another few lines of AI code.

With each new chapter in the *Wing Commander* saga, the story became more important. The writers, led by science-fiction author Ellen Guon, explored such themes as the fine line between heroes and traitors, the effects of a long, drawn-out war, and how the winners always write the final history. By the time of *Wing Commander III: Heart of the Tiger*, those universal themes were given a big budget, and filmed as though they were a full-length motion picture. Three years later, *Wings II* is starting to show its age. The Khrishi often look like angry Muppets, and a few of the big-name actors were visibly uneasy with the interactive format. Even so, *Wings III* is more than a museum piece, because it was the first—and still is the best—sample of that strange hybrid, the interactive movie.

Wing Commander IV: The Price of Freedom is a cinematic extension of *Wings II*. It's essentially a galactic docudrama, featuring seven CDs packed with full-motion video. The acting is much more assured than that of *Wings II*, featuring fine performances by Tom Wilson (Maric) and Mark Hamill (Blair) among others. But while the story itself is quite engaging—particularly when exploring the dynamic relationship between war hero Colonel Blair and his mentor, Admiral Tolwyn—*Freedom* lacks the visceral punch of Roberts' earlier work, as the gameplay takes a definite backseat to the film.

When you consider that a very good game such as *Wings IV* is considered a setback, however minor, it shows just how high expectations are for the next installment. But let it be that *Wing Commander: Prophecy* does such a good job of blending gameplay and cinematic that it will shine as one of the brightest in the *Wing Commander* canon.

www.riven.it

"The most fun I've had with *Wing Commander* was bringing my *CGW* acting award [for *Wing III*] to rehearsal for *Wing IV*. At first, Mark Hamill thought I made it up—then he asked why he didn't win one."

—Tom "Maniac" Wilson

Colonel Blair (once again played by Mark Hamill) is still around. If you can get over the fact that in a previous existence, you were Col. Blair, you'll have fun being virtually young again—although you do have to show the proper hero worship to Blair.

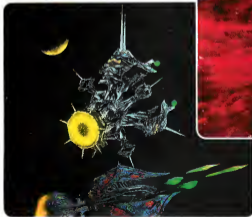

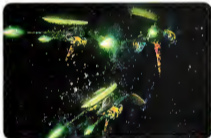

Some of the rest of the old gang are still around as well, most notably Tom Wilson, who never gets enough lines as Maniac (While Origin/EA has no official comment, it's obvious that everyone concerned would love to do the long-

rumored "Maniac Missions" for *Wing Commander*. It's mainly a matter of time and money.) Ginger Lynn Allen reprises her role as Rachel, after a hiatus during *Wing IV*. In a nice touch, she gets to actually act this time, instead of just raising the blood pressure of every male pilot on the carrier.

I'll let you decide whether *Prophecy* is more or less dramatically effective than its predecessors. But I will say that I was particularly impressed with the performances director Adam Foshko elicited from his actors, especially since most of them had never even played a computer game before. We'll see how well those performances translate into the final product.

The Best Elements of Each

The missions themselves are a cornucopia of classic *Wing Commander* themes, except that there will be special multiplayer missions for Internet play. The over-present branching tree is more dynamic than before. Missions now have degrees of success or failure, which give more variety for both the in-flight and movie sequences. In addition to the torpedo runs on larger craft, you have both small and medium dogfights, which may occur anywhere. The

OOZING ALIEN HORDES Three alien ships move to combine into a larger vessel for attack (top left). Above, a damaged alien seems to almost bleed blue into a nearby planet's atmosphere. From the asymmetric spines of the Porcupine to the sleek and deadly *Manta* (left), each alien ship displays a unique and eerie organic quality.

designers of *Prophecy* are big fans of *Wing II*, in which you often had to scramble to protect the carrier from surprise attacks, so expect to see these kinds of elements in *Prophecy* as well. Then there are escort missions, which are designed to be difficult, as in the *Secret Missions* disks, plus a few covert operations that we can't tell you about just yet. Finally, it is possible that asteroids—a staple of *Wing I* and *II*—will make it back into the line-up for *Prophecy*.

What you won't find during the missions are the same old audio and video cues, such as Maniac's annoyingly repetitive dialogue every time you told him to attack in *Wing IV*. The new engine allows for Dolby Pro Logic sound, which, if you have the right audio equipment, provides dynamic sounds for every object in the environment. Thus, if you are in a battle and an enemy vessel is slightly to the left and behind you, that's where you'll hear it. The constant buzz of radio chatter, zooming ships, and explosions adds tremendously to your perception of the battlefield.

Another big change is in the cinematic sequences. Generally, these happen between missions, but without the interactive "multiple choice" responses of *Wing III* or *IV*. What now happens is very much as in *Wing II*, where the movie clip you see is dependent on what you do in the light combat sequences. Director Adam Foshko feels that this approach gives the linear portions of the game more punch, since you aren't playing "20 questions" in every scene.

In the end, what's most impressive about *Prophecy* is not just the technology, even though the 3D engine beats anything on the market (even without an accelerator card). Neither is it that the movies are more tightly focused, or that the missions are better designed. It's that the team took chances rather than repeat a best-selling formula. They completely dissected what has made *Wing Commander* the best gaming series to date, kept the best parts, and discarded the rest. The fact that *Prophecy* will cost much less than *Wing IV* will doubtless make EA very happy. The fact that this could be the best *Wing Commander* ever in terms of gameplay will doubtless make a lot of gamers very happy as well. As for myself, I can't wait to make multiple torpedo runs on one of those mile-long alien capital ships. **S**

Wing Commander Goes DVD

F or a Hollywood type, *Wing Commander Prophecy's* producer, Mark Day, is an odd sort, and not merely because of his *Three*

Musketiers-vintage beard. You see, Day has a deep, dark secret: He is also (hold on to your joystick) a serious gamer. Born of two worlds, yet belonging entirely to neither, Day spends his time in Mr. Spock-like fashion, striving to create the killer app that will forever bridge the gap between FMV and traditional games. Small wonder, then, that he has found a home at Origin, where he is currently finishing the DVD version of *Wing Commander IV: The Price of Freedom*. This DVD epic will feature the same gameplay as the original, but the movies will lose their compression artifacts, finally becoming truly cinematic in scope.

In addition to rhapsodizing about the DVD version of *Wing Commander IV*, Day had plenty to say on the subject of FMV games in general. "To me, an FMV game is any that benefits from video, whether it's a postage stamp movie (as in *Civilization II*) or a full-screen treatment. For example, you can click right past the video sequences in *Command & Conquer*, but why? They really enhance the experience. I can hardly wait for the day when 3D shooters like *Quake* incorporate video in a similar fashion to draw you even further into the experience."

Day describes DVD as "a technology in search of a home, much like CD-R/DV when it first appeared. At first CDs were seen as a way to avoid putting your game on 12 floppies; now, of course, they're much more. I expect the same for DVD, once designers learn how to best make use of the new technology."

The conversion of *Wing IV* to DVD was obvious, according to Day. "You had something with the highest production qualities of any game ever produced. What you see with the DVD version was that all the time and money spent shooting *Wing Commander IV*

on 35mm film was well spent. There's a huge difference between the MPEG-2 capability of DVD versus the compression routines used for earlier versions."

Wing Commander IV will be aggressively bundled with DVD units, making it a great "look at what my hot-rod computer can do" conversation piece. If you haven't yet played *Wing IV*, and you're tempted to get a DVD player anyway,

this gives you a good excuse. If, on the other hand, you are waiting for that one killer application before taking the plunge, don't worry—*Wing Commander Prophecy* has already been slated for DVD.

MARK DAY, *PROPHECY* PRODUCER (LEFT) WITH TOM WILSON (MANIAC)

All the money spent on *Wing IV* is a little more justified in the DVD version.

The Baron

Bullets riddle your plane, shattering wood and shredding canvas. The sky screams with red tracers, smoke and explosions. And as the Red Baron himself blasts out of the sun's glare... as your palms start to sweat and your pulse races... as you hear the ominous groan of stressed wings the instant before they shatter... you realize that this is much more than just a game. This is a taste of history. And your next move will determine whether you become a legend... or another kill in the Baron's book.

Eight years ago we set the standard for flight simulation with a product so timeless and revolutionary that it has remained unchallenged... until now.

The Baron is Back.

is Back!

Over three years in the making, *Red Baron II* is an epic achievement. From gamer directed features to state-of-the-art technology, it is the ultimate recreation of the men, machines and experience that marked the birth of aerial combat.

- ✦ Dynamix's revolutionary new 3Space 2.0™ engine takes a giant leap ahead of the competition with unmatched realism in terrain modelling.
- ✦ User-definable difficulty levels for players of all skill levels.
- ✦ Multiplayer dogfighting action featuring internet, network and head-to-head modem support.
- ✦ Fly single missions for quick action or select Campaign play for a full tour of duty.
- ✦ Over 40 unique aircraft with 22 flyable planes.

- ✦ The Dynamix Mission Builder™ allows players to completely customize their missions.
- ✦ Dynamix's revolutionary new ACE AI system recreates the skills, tactics and personalities of historical and non-historical pilots with unbelievable realism.

- ✦ The Plane Paintshop™ allows players to customize the colors, insignias and look of their planes, using either provided patterns or by importing artwork of their own from any standard paint program.

Red Baron II

Times have been tough lately for computer

role-playing games. Once the proudest of warriors in all of computer gaming, RPGs came sputtering into the mid-'90s like a group of gasping, wheezing old men—riddled with dated engines, hackneyed stories, and flaccid gameplay. While we watched the rest of the industry flourish, magazines such as this one and gamers everywhere began to openly wonder: Is the RPG genre finally on its last legs?

Get Me

The answer, we're now happy to report, is a resounding no—not by a longshot! You see, a funny thing happened on the way to the old-age home: The RPG managed, somehow, to inject itself with a fresh dose of health and mana, and it's beginning to radiate with life again. Now, as we approach the end of 1997, role-playing games are

poised to make a triumphant return to the center of gaming.

What accounts for this great reversal of fortune? We credit three things.

First, the genre is finally catching up with gaming's technological advances of the past few years. RPGs have notoriously long development times, and only now are we beginning to see RPGs featuring things like fast 3D engines, high-resolution color, multiplayer, and stereophonic sound.

Second, now that gamers have feasted upon such graphically stunning games as *Quake*, they're hungering for something a little meatier. You see it happening in the action genre itself, where a number of upcoming titles are beefing themselves up with RPG-style characters and story elements. Instead of being a pariah, the RPG has suddenly become something to emulate.

Third, there's the little matter of a game called *Diablo*. Yes, Blizzard's megahit boiled the RPG down to its most basic element—dungeon hack-and-slash—but it did it with such style and addictive gameplay that its value as entertainment was impossible to ignore. (Even the grande dame of role-playing herself, our own *Scorpio*, recently admitted to the editors how much fun she had with *Diablo*.)

We can argue endlessly—as the Usenet threads will verily—over whether *Diablo* was a "real" RPG, but why bother? Just be glad that it made RPGs cool again for gamers. Thanks to this one game, you suddenly have thousands of new gamers who are familiar with concepts such as armor and weapon class, and experience points—and who are now ready for

something deeper. Be glad, too, that the game inspired a number of RPG designers to angrily declare, "That's not an RPG. I'll show you a *real* RPG!" Good. Thank you. We've been waiting. *DIABLO* proved to be the kick in the pants that the genre desperately needed.

Treasure Chest

The payoff for RPG fans is a bounty of new games—the richest in years. Over the next 20 pages, we'll focus on the highlights of what to expect in the coming year. Along with previews of major releases from the Grand Trifurcate of RPGs—*ULTIMA*, *WIZARDRY*, and *MIGHT AND MAGIC*—we also look at a number of long-delayed projects, as well as at the first PC version of the extraordinary *FINAL FANTASY* console series from Japan. We'll point you in the direction of some of the more high-profile online multiplayer games, and focus on two of the more promising shareware RPGs.

But enough talk. Let's adjust our armor, light our torches, and head forth upon our quest. It's time to get medieval!

Might and Magic VI: The Mandate of Heaven

New World Computing's Fabled Franchise Returns for More RPG Magic

Four long years have passed since *Dawn of Xeen*, New World Computing's previous entry in its landmark *Might and Magic* role playing series, and for those of us who love the series, it has seemed like an eternity. For New World Computing, though, those years were anything but quiet, as the company shifted its focus to create two of the greatest strategy games of the past decade—*Heroes of Might and Magic I* and *II*. And given the phenomenal success of those games, it's hard to argue with the company's plan.

New series creator and New World president Jon Van Caneghem is turning his attention back to role-playing with a new game due this November—*Might and Magic VI: The Mandate of Heaven*. Those familiar with the previous games, however, should not expect more of the same. Van Caneghem and his team are pushing the series forward technologically to create a *Might and Magic* unlike anything you've seen yet.

HAIL MARY *M&M VI* provides you with an endless sea of monsters to slay. Unless you've got the proper might and magic to defeat this minotaur, however, you might want to say your prayers.

Along the way, you'll participate in dozens of non-linear sidequests and learn more about the Ancients' struggle—the ubersstory behind the whole *Might and Magic* series. What's more, New World tells us you'll be preparing yourself for *Heroes of Might and Magic III*, which the company says will weave into the *M&M VI* storyline. (*Heroes III* is as yet unannounced—so calm down for now.)

Face Lift

New World has completely revamped the character creation and spell systems for *M&M VI*. Instead of randomly rolling stats, as in the previous games, you can customize your characters with the new allocat-

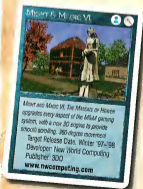

Paging Roland

MIGHT AND MAGIC VI: THE MANDATE OF HEAVEN takes place in the same universe as the previous games, but instead of placing us back into the long-running storyline of the struggle between Shethem and Corak, this game moves to another world seeded by the Ancients long ago. This new world happens to be Enroth, the setting—hardly a coincidence—of two *Heroes of Might and Magic* strategy games.

As *M&M VI* opens, you discover that King Roland has mysteriously disappeared, and Enroth has been plunged into chaos. Floods, earthquakes, and an invasion of hellish flying demons are destroying the land, and the people are beginning to wonder if the trouble is a sign that the Ironist Dynasty has lost the Mandate of Heaven, the divine right to rule. Your main quest is to discover what lies behind the chaos in Enroth and to try to return the land to order.

ed point system. You'll be able to choose the class and initial secondary skills of each member of your party (composed of four characters, down from the previous games' six) and then increase the stats for each character from a pool of points. As Van Caneghem puts it, "You can make [for example] a really strong but really dumb fighter, if you like, or create a very well balanced thief."

For the new spell system, New World has eliminated the need to collect gems for spell-casting, and has gone instead with a straight spell-point system. The new spell system comprises nine categories of magic, ranging from elemental to spiritual magic. Different character classes will be able to use different kinds of magic. Spells will overlap somewhat, so that if a quest requires a specific spell, gamers will have access to it no matter what character types make up their party.

HELLO DOWN THERE M&M VI features a smooth-scrolling 3D engine that will let you move in all directions, including, at times, straight up into the air.

TRAIN IN VAIN You'll be able to get buff at the game's various training grounds, as long as you have the experience points to pay.

Graphically, M&M VI represents a quantum leap over the previous games, with a brand-new 3D engine that will provide smooth-scrolling (as opposed to tile-based scrolling), 360-degree movement throughout the fantasy world. The world itself is a vivid hi-res, 3D environment (though New World promises that a 3D accelerator won't be needed to play the game).

Jon Van Caneghem: The Hero of MIGHT AND MAGIC

Jon Van Caneghem has headed the *Might and Magic* franchise ever since *Might and Magic I* in 1986 (the first computer game), which he designed and programmed almost entirely by himself. Van Caneghem was gracious enough to take a break from the hectic schedule of the new game to answer a few questions. **GGW:** As someone who has been developing computer RPGs for more than a decade, you've seen the genre's popularity ebb and flow. For the past few years, everybody has been saying that the genre was near-dead, but now it seems to be on the rise again. Any theories as to why it's making a comeback? **Van Caneghem:** Rumors of the death of CRPGs have been greatly exaggerated! The product development

cycles of CRPGs are typically much longer than that of the standard run-'n'-gun games that have been so popular in recent years. With the hardware advancing at such a staggering rate, it just didn't make sense—financially—for most companies to invest resources into the genre. However, the gaming audience is looking for products with more “meat” in them now, a hunger that 3D shooters and pseudo-RPGs can't satisfy. **GGW:** Have you played any of the newer RPGs, like *Demo* and *Diablo*? If so, what do you think of them? **Van Caneghem:** Yes, I have. Both give a pretty good gaming experience for what they are. However, *Diablo* is an action game disguised as an RPG, and *Demo* is a true RPG saddled with 1994 technology.

The biggest news, for some fans, will be the addition of real-time combat—which will coexist with the game's traditional turn-based model. Why did New World go this way? According to Van Caneghem, it's because of the new engine's capability for smooth-scrolling movement. “It didn't make sense to force turn-based movement, hence turn-based combat, on the player,” he says. “We're giving gamers the option to play in either mode, whichever best suits their style of play.”

In keeping with the real-time model, New World stresses that M&M VI will be a living, changing world as you play. Events won't always be triggered by your actions, and the game's dozens of NPCs will often follow their own agendas through the world. In addition, locations will not remain static as you continue to play. For example, if you hack and slash a group of monsters in a forest and then move on, you might come back later to find it inhabited by another group of monsters.

Red Eye

Fans of New World's *Might and Magic* games (both the strategy and RPG titles) know that the company always manages to infuse the series with that mysterious X factor—that addictive ingredient that makes you play the game night after night until your eyes hurt. Based on what we've seen so far of *Might and Magic VI*, you may want to start catching up on your sleep now. They just may have done it again. —Jeff Green

GGW: What other games are you into these days? **Van Caneghem:** Lately I've been fiddling with *Dungeons & Dragons* and *Battle*, in *Arx*, but my time is really dedicated to *Might and Magic VI* development. **GGW:** In the beginning, you did all the work yourself. How much of *Might and Magic VI* are you directly involved in? **Van Caneghem:** I'm still involved in virtually all aspects of game development. There's everything from designing the interface, maps, and quests to overseeing and directing the artwork, storyline, and overall look and feel of the game. The buck stops here. **GGW:** Do you still enjoy getting your hands dirty with development, design, and coding? **Van Caneghem:** Yes! That's where the fun of this job is.

Best Hardware. Best Software.

Dominate the 3D universe with **Voodoo acceleration**. 3Dfx Interactive delivers the fastest-amazingly fluid 3D ever. The eye-searing graphics and killer special effects in your game arsenal will now run at **blazing speed**.

As a cadet you have the chance to train at the Academy.

As a pilot you have the chance to battle hostile enemies.

As a captain you have the chance to establish an alliance with
aliens you don't really trust in order to save the universe.

Obviously, this is not a game of chance.

The Great Intergalactic War has left the Galaxy in chaos. And a steadily increasing barrage of attacks on human ships leaves you with only one choice. You must set out on a series of covert missions to defeat the enemy. Everything you do, every enemy you kill or let get away, every decision you make will have an effect on the ever-changing plot.

For PC CD-ROM. Available late September. To purchase Forced Alliance visit your local software retailer, or call 1-888-797-5867. Downloadable demo available at www.ripcordgames.com

CONSEQUENCE OF RANK - As you progress from the rank of Cadet to Captain, you'll go from taking orders to giving them. The power & the responsibility of commanding an entire fleet of ships will be yours.

CONSEQUENCE OF ACTION - It's not just if you win or lose, or even how you play the game. Everything you do determines how the game is even played at all.

ROSIANBO COMBAT STRATEGY - Space combat with a twist. Your ship is a rock. Another is paper. Another is scissors. You can't beat them all & they can't all beat you. Plan your attacks accordingly.

A THICKENING PLOT - With an unparalleled depth of play, set against out-of-this-world SCI graphics, figure out a constantly changing story as you maneuver & vanquish four lighters, while dealing with three different alien races.

for real aliens

Return to Krondor

Raymond Feist Makes a Triumphant Return in the Long-Awaited sequel

In 1993, Sierra On-Line released *BETWIL AT KRONDOR*, the first RPG based on Raymond E. Feist's *Riftwar* saga. It subsequently went on to win both CGW's Premier Award for CRPG of the Year and a place in the Hall of Fame, mainly due to the fact that Feist actually helped in the writing and design of the game.

Subsequently, though, there was a fallout between Feist and Sierra On-Line, and Feist moved his services over to 7th Level, while Sierra continued work with their own RPG based on the *Krondor* engine, the recently released *BETWIL IN ANVIRA*. Now, after a couple years of work, Feist and 7th Level are preparing to release *RETURN TO KRONDOR*, the true sequel to *BETWIL AT KRONDOR*.

Dig It

RETURN TO KRONDOR takes place about a year after *BETWIL AT KRONDOR*. Prince Aurtha still rules over the city of Krondor. Pug is still the master Magician at Stardeck, and James, though now a Saigneur, is still up to his roguish activities. This time though, the game doesn't start with a mere "escort service" plot setup, as in *BETWIL AT KRONDOR*. Instead, we begin with a treasure hunt.

ON BIG BEAR This ugly-map belongs to Beak, arch-hairless and leader of the mercenary pirates hired by Sid to capture the Tear of the Gods.

A priceless artifact, the Tear of the Gods, is lost at sea. It was being transported by members of the Temple of Ishap (the prime god in *Midkemia*) when they were attacked by pirates working for a mad sorcerer named Sid who, for reasons unknown, wants the relic. Unfortunately, the ship containing the Tear accidentally sunk, leaving the Tear at the bottom of the sea. The initial, overall quest is to simply find a way to recover the Tear from the ocean floor. But in the process of recovering the Tear, the player charac-

ters are drawn into a massive, three-way conflict for the Tear, and end up fighting an evil that may even be older than the gods of *Midkemia* (the Valheru perhaps?).

This time, you'll be playing five characters, of whom only one was from the previous game. Or the characters we've seen in the books, you'll be portraying James (one of the more popular characters in *Riftwar*), and William, the Knight-Marshal of Krondor and son of Pug the Magician. The three other player characters will

be new ones made for the game: Jadhra, the Keshian sorceress (from an exotic, Middle Eastern-style empire); Solon, warrior-priest brother of the Temple of Ishap; and Kendaric, a reluctant Midkemian wizard.

The game is separated into 10 chapters with an overall goal. As in the previous game, each chapter has one main "quest" you must fulfill in order to move the story along, but you are free to do just about anything you want until you finish that main quest. Within these chapters, while different party members come and go, none will leave permanently, unlike in *BETRUAL AT KROMOOR*.

A Whole New World

Since Sierra retains the rights to the original *BETRUAL AT KROMOOR* engine, 7th Level went ahead and created a new one for its game. Rather than go with the first-person perspective in the first game, they went completely third-person. And if their ideas for this engine actually come through, it will be immensely better than its predecessor.

When traveling large distances around the game world, the overview map is used, but when the player reaches a specific place of interest, it switches to the third-person view where you navigate the area with the cursor.

Combat is still turn-based, and is seamlessly integrated into the game's action. Instead of walking down a street and seeing the words "you encounter a gang of thieves," you'll actually see the thieves approach you on the street, taunt you, and then draw their weapons as combat begins.

Combat uses the same rules as the original Midkemian role-playing pencil-and-paper game (on which the books are based). While fighting, a wide variety of activities are possible. Characters can fiddle with their inventory, defend one another, cast spells, and even interact with the environment. One example would be a prison break in which the characters can attack the guards, pick the locks, and equip themselves from their fallen enemy all during combat.

Perhaps the coolest feature in *RETURN TO KROMOOR* is the use of animated 3D models for characters. 7th Level is hard at work creating well-animated models that will be placed on top of beautifully rendered background art. The use of these models allows for minute details that enhance the overall atmosphere. During dialogue, for example, characters will scratch their heads in puzzlement, shake their fists in anger, or helpfully point you in the right direction; while during combat, wizards will make the necessary hand motions when casting spells.

RETURN TO KROMOOR also includes such features as an Alchemy Lab, where you craft your own potions, and lock picking, which involves solving an actual lock-oriented puzzle (as opposed to the simple "use lockpicking skill" found in most RPGs). Features like true line-of-sight, shadows, and lighting round out the game.

With Raymond Feist adding his writing savvy and being even more involved with the design than in *BETRUAL AT KROMOOR*, *RETURN TO KROMOOR* looks like it could be one of the best RPGs in years. —Thierry Nguyen

Riftwar Reading Rainbow

While not absolutely necessary, it would be a good idea to read Feist's *Riftwar* novels before

playing *RETURN TO KROMOOR*. Here's a recap of the important details of the *Riftwar* saga.

Magician: The uber-novel of the saga, this novel was subsequently split into two separate ones (*Apprentice and Master*) due to its sheer size. This introduced the master magician Pug, and gave many details on the Midkemian universe, such as the Ysauri, the Vatheru, and magic in general.

Silverthorn: This book introduced the villain

Murmandamus, as he sets a plot to assassinate Prince Anutha. Here, Anutha's bride-to-be, Anita, took an arrow meant for him—an arrow tipped with the rare poison Silverthorn. Anutha then sets out to find a cure and gain more information about Murmandamus. This novel developed the character of boy-thief Jimmy the Hand, one of the reasons the book was so popular.

A Darkness at Sethanon: The final chapter in the *Riftwar*, this brings back all of the main characters of the *Riftwar* together as Murmandamus marches to Sethanon in order to kill Prince Anutha and free the Vatheru from the Lifesione.

You should also play the first game based on the series:

BETRUAL AT KROMOOR: In the prequel to the new game, the flag of Murmandamus is raised again, and Gorath, a monstrous clan-leader, goes to warn Anutha. But, things get twisted and the true enemy is found and thwarted before disturbing the Lifesione again.

FIRE ON THE PORT BOW If 7th Level can use their 3D models in both out-scenes and actual gameplay, *Return to Kromoor* will definitely be one of the best looking RPGs.

Final Fantasy VII

RPG Fans Can Prepare for an Invasion From the East

The console world's equivalents of *Might and Magic* and *Ultima* are the role-playing series *Dragon Warrior* (Dragon Quest in the U.S.) and *Final Fantasy*. Both command huge followings and have spawned television shows and top-selling music CDs in Japan. When a game from either series debuts in Japan, it is an event tantamount to a big-budget movie's premiere. For years, PC gamers have wondered and (admit it) scoffed at the success of these two console RPGs. How could a game made for a medium as limited as an 8- or 16-bit cartridge inspire such a following? The answer, it's the storytelling and the characters. But don't take our word for it. You'll be able to see for yourselves when *Final Fantasy VII* comes to the PC in early 1998.

Your First Fantasy

The *Final Fantasy* series resembles *Might and Magic* in that the characters and, occasionally, even the worlds, are different in each game. Only the game engine and a few recurring creatures and themes remain the same, and thus allow the name to carry over. So, you can enjoy *FFVII* without having played the earlier *Final Fantasy*

SCREAM The most powerful magic in *Final Fantasy VII* is cell magic, with which you can summon great beasts like this Leviathan to destroy your enemies.

games. Of the six previous games in the series, only three have made it to the United States. *FFVII* is already out in Japan and should arrive here for the PlayStation on September 7 before making its way to the PC next year.

The story deals with a world crushed under the iron rule of a country-corporation called Shinra. Shinra controls the world's resources and is responsible for siphoning off Mako, the planet's life energy, making all that lies outside of Shinra's domed city lifeless and barren. The freedom-fighting group *Avalanche* wants to halt Shinra's parasitic reign. To that end, *Avalanche* wages a guerrilla war against the establishment, and the characters you play get involved with both groups, creating a plot of betrayal and intrigue.

The three main characters are Cloud Strife, a defector from the Shinra who has joined *Avalanche* for money, Barret Wallace, the leader of *Avalanche*, who is on a personal quest to avenge the death of his wife, and Aerith Gainsbourg, a civilian unintentionally drawn into the conflict. Several other characters appear during your ongoing quest, including a loud-

mouthed pilot, a naive female ninja, a beautiful street lighter, and a lost soul who has been cruelly biomechanically altered by the Shinra. As it's a Japanese RPG, *Final Fantasy VII* also features a few weird and funny player characters that normally wouldn't be seen in American games, including a talking, red tiger-like creature and a strange character duo of an intelligent cat and the yeh-like Moogle (a funny, white, magical creature that is a *Final Fantasy* staple).

Love and War

Each of the characters has a distinct personality and his own storyline. Some characters have side stories that only peripherally deal with the game's main plot, while others are inextricably tied to it. *Final Fantasy* games traditionally have extensive stories for each of their characters, and part of the *Final Fantasy* magic is that these stories sometimes have nothing to do with the game, but are simply there to flesh out the character.

Many of the stories merge with the side-quests, which, again, aren't integral to the game but create a sense that you are roaming a world

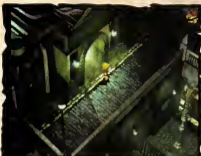

that is real and alive with its own numbers and personalities. In previous *FINAL FANTASY* games and in Squaresoft's other major U.S.-licensed RPG, *Chrono Trigger*, some characters get married, some mope with unrequited love or get involved in love triangles, others travel back in time to save a loved one from an accident or confront a parent who abandoned them. The series has always featured storylines with very interesting twists, and a game wouldn't be worthy of the name *FINAL FANTASY* if the plot didn't contain at least one betrayal. Brothers turn on brothers, and kings betray their loyal servants. Don't be surprised if friends turn out to be foes in *FFVII*.

Swords and Sorcery

Through six iterations, Squaresoft has refined the *FINAL FANTASY* combat engine into an elegant system. Combat isn't real-time, but is played in phased turns. Every character has a different attack speed, which is measured by a time meter. When the time meter is at full, the character can attack. Once the attack is completed, the meter resets to zero, and the character must wait before he can attack again. Your enemies also have speed meters, and if they are faster, they can attack you while you wait for your meter to fill. This creates an exciting dynamic that is missing from traditional turn-based combat, but still allows for different strategies of attack that aren't possible in real-time games. Each character has a normal attack, but some have special powers or spellcasting abilities, and all can defend or use items during battle.

Magic has always been a large part of *FINAL FANTASY*, and *FFVII* is no exception. Most of the previous games have had various schools of magic. Traditionally, the three types of magic were Black, White, and Calling Magic, which could be categorized respectively as attack, healing, and monster-summoning magic. Certain

KNOCK, KNOCK In *FFVII*, story and character interaction is the most vital part of the game, so you'll go searching for people to talk to and places to visit.

EN GARDE Here is the time-to-kill combat of *FINAL FANTASY*, which allows you to strategize your attack, but also conveys a real sense of excitement and urgency.

characters in the game would be magic-users, or callers, and would have the ability to use these types of magic.

In *FINAL FANTASY VII*, these spell conventions are maintained and two new types are added: Blue Magic, which is magic you learn from your enemies; and Mysteria Orbs, magic artifacts that draw on Mako and can be used by all characters. The Mysteria Orbs can be attached to weapons to add attack and defense bonuses, worn by characters to boost attributes and defense, and used to cast spells that are normally reserved for a specific character class. The orbs are a vital part of the *FINAL FANTASY*

magic system and can be bought, taken from enemies, or found in your travels. Calling Magic, which has been with *FINAL FANTASY* since the early games, is perhaps the most impressive of all the game's magic, as it allows you to summon awesome magical creatures—dragons, gods, and titans—to attack your enemies.

Finally, We Wait

As of this writing, it's not known if Squaresoft has begun the porting process for the PC version. The only real obstacle in the port is the translation of Japanese text, a task that is already under way for the American PlayStation version. Squaresoft will bring the game to the Windows 95 platform, and currently it is holding to a late first-quarter 1998 release date. All indications are that the game will be identical to the PlayStation version, though a 3D card might be recommended or required to maintain the same level of detail and graphics. However, since the PC version seems to be taking a backseat to the PlayStation version in Squaresoft's U.S. offices, we won't really know more until the PlayStation port has been completed. By then, Squaresoft might be ready to talk more extensively to the PC gaming press, and we'll be able to bring you more up-to-date information on what could well be the role-playing event of 1998. —Ediot Chin

MIDGAR This is the initial setting for the PC port of the Squaresoft RPG *FINAL FANTASY VII*, which pits the freedom fighters of Avalanche against the ruling Shinra.

Anachronox

Tom Hall Explains His Role-Playing Vision

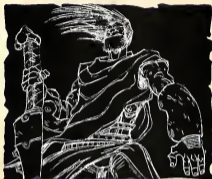

Tom Hall, one of the legendary founders of id software, has some distinguished action games to his credit, but what he has always wanted to create is a role-playing game. Now as a member of ION Storm, he is fulfilling his wish, crafting a role-playing game inspired by both his years-long desire and the Screenshot console RPGs he has grown to love.

The game is called *Anachronox*, and while it's still early in the game's development cycle (the game won't ship until late 1998), Hall was gracious enough to talk to us about the project.

"*Anachronox* is a 3D role-playing game using the Quake engine. The player controls up to three characters at a time, from an eventual cast of seven, exploring the galaxy and three different dimensions. Gameplay is exploration of the galaxy, melee with various galactic foes, and discovery of unique weapons and items that aid you in your quest. You can choose different characters and ways of doing things, leading you to a variety of events and areas in the game."

Sender One

Anachronox takes place in the future, when the galaxy has been connected by huge planetary wormholes called Senders, artifacts left by a dead

RAJIN Hall won't comment on the exact types of enemies you'll face, but there will be recurring villains "among the 100-strong rogues' gallery, including this dude."

alien race and which are now the hubs of trading and civilization. One particular Sender gives the game its name. "At the center of the universe lies Sender One," says Hall, "and in a time bubble inside the titan Sender floats the city of *Anachronox*. Theory has it that *Anachronox* was once home to millions of quarantined aliens who slowly died of some horrible plague (the name literally means "poison from a previous time"), leaving the city to fall to ruins, only to be taken over by their nefarious dealings."

It is here that your adventure starts, as you assume control of the main character, Sylvester "Sly" Boots, and his partner, Stiletto Anyway. You soon discover that the galaxy is collapsing upon itself and embark on a grand quest to stop this alarming phenomenon.

Elementary Characters

Like *Final Fantasy*, Screenshot's premier role-playing franchise, *Anachronox* will be very character-driven. "Each of the characters has a [story] arc, some of which are solved by the end of the game," Hall says. "There's a reason every-

one is doing what they are doing, and their agendas are important to the story and to what actions they choose and how they go about them." Hall wasn't prepared to reveal all the characters, but he did describe a third: "Grumpus is an old wise-man with ridiculously long hair who studies the Elementor discipline of MySTech [Mystrium Technology]—he is able to actually make new weapons by combining modules called Elements."

This system of combining modules to create unique weapons is one of the more exciting features of *Anachronox*. "The Elementor weapons system is a whole new way for the average user to explore the game and create things," says Hall. "Without any programming knowledge, they can combine Elements to make new weapons and make them part of the game." Hall also plans to introduce an Element-maker program so that gamers can incorporate custom-made Elements into the game world for experimentation.

Hall's design calls for the game's scope to be truly epic, so you'll be traveling to three dimensions and numerous worlds, and through time, facing hundreds of enemies. Hall feels it's too early to reveal the worlds you'll see and the enemies you'll fight, but we promise to loosen his tips and bring you more information in the months to come.

Other vital information Hall could confirm was that the game will be played in third person, using the Quake II engine. Combat will be real-time, and it will be a single-player game.

Hall's ION Storm team is already busy into development, but with myriad worlds and events to craft, Hall is very careful not to underestimate the duration of this grand project. He anticipates a late 1998 release. Look for CSW to bring you a full sneak preview as the game progresses. —Eliot Chan

Welcome to
the new landscape
of War.

CAVEDOG ENTERTAINMENT™
PRESENTS...

TOTAL ANNIHILATION™

The New Landscape Of War

In a distant part of the Galaxy, the Core and the Arm continue a thousand year battle over long forgotten ideals, destroying everything in their path...

TOTAL ANNIHILATION is a real-time war game featuring true 3D terrain and run-time generated 3D units. Tanks drive up and over hills, tilting and rocking with each bump in the landscape and impact with enemy weapons. Battle on diverse landscapes, including lava worlds, ice planets, desert valleys, alien tundra, towering mountain peaks and vast island-dotted oceans. Build defenses high in the hills for a better view and a better shot. Giant Bertha cannons pound the enemy from across the world. Planes bank and dive in intense air-to-air combat. Amphibious tanks drive into and dive under water for surprise attacks. Download new reinforcements from the web and swarm the enemy with hundreds of ever evolving units.

TOTAL ANNIHILATION'S 3D landscape is a revolution that demands deeper strategy and generates more realistic game play. Mobilize your forces and experience the new landscape of war!

An Elder Scrolls Legend: Battlespire

Bethesda Unveils a New Focus in Battlemage Tale

Imagine that you've been selected for training as a member of an elite commando unit, but discover upon reporting that the "best of the best of the best" have been slaughtered by a more powerful enemy. Such is the setup for *An Elder Scrolls Legend: Battlespire*, Bethesda's next installment in the land of the Elder Scrolls.

This isn't a sequel to *THE ELDER SCROLLS: DAEDRAL*; you can expect *THE ELDER SCROLLS: MORROWIND* to assume that mantle of epic, free-wheeling role-playing in 1998. Rather, *BUTTERFLIES* portends a series of *Elder Scrolls* Legends—focused games with an emphasis on combat and action in a story framework in which you have the opportunity to finish the game without the massive time commitment required by *DAEDRAL*.

BATTLESPHERE has the advantage of drawing from the richly defined cultures and world designed for the larger games without being tied to the style of play and the sometimes disorienting freedom of the massive quests. You already know what Battlemages are because you've encountered them

in various castles around Tarniel. You'll still be able to customize your characters and build your spells in much the same way you did in **DAGGERFALL**. You'll already know something about the demonic spawn known as the Daedra because you'll have slayed

the lore and language of these diabolical monsters in order to fight and/or use them in previous games. Yet, *Battlestar* will infuse the familiar trap-
pings of 'lammel with better graphics (particularly the new special effects for magic spells), a new combat system (real-time with new weapons and spells), and multiplayer modes (cooperative play, team play, and deathmatches for LAN, point-to-point, and Internet play).

Within the background story, the eponymous Battleground is a dimension created by the Emperor's Elite Guard, the Battlemages, as the ultimate testing and training ground for the elite corps. The dimension consists of a variety of battlefields: dungeons, which allow the designers to exploit their fighting effects and plant nasty traps in the shadows; and castles, which allow the level architects to exploit the 3D engine's ability to handle height and physics. As a new recruit, you arrive at the training facility only to discover that the elite corps has been slaughtered. Being the heroic type, you opt not to do the sensible thing and run away as fast as possible. The challenge you face is

LIGHT MOTIF You'll find the lighting effects in *BattleSpire* to be much more impressive than those in earlier *Elder Scrolls* games.

MEET GRINDER Sensitive. Features diabolical traps that serve as nasty physical logic puzzles.

to get to the bottom of the mystery and right the wrong done to the empire you call home. Since you'll face a literal prince of darkness—a Daedra noble named Prince Machrunes Dagon—it will take you a while to get to the heart of the situation. You'll need to build up your strength, skill, and sorcery in order to be able to wipe out the Daedra minions and, finally, the ultimate bad guy, Machrunes himself. —Johnny L. Wilson

Forsaken: Thrall of Chaos

Eidos Takes On the Devil in a New Isometric Action RPG

Once Diablo proved to be a megahit, it didn't take an archmage to predict that, as with the real-time strategy blitz, other companies would jump on the bandwagon in an attempt to duplicate Blizzard's massive success. One of the first "Diablo clones" out of the gates will be a fantasy RPG from Eidos, called **FORSAKEN: THRALL OF CHAOS**. Actually, you should take the game's title with a grain of salt, because Eidos, in a fine example of marketing wizardry, has changed the name four times in the week we were preparing this article: from **FORSAKEN TO EXILED**, **THE FORSAKEN SAGA**, to **EXODUS**, to, as we go to press, **FORSAKEN: THRALL OF CHAOS**. Who knows what it will be called by the time you read this.

The Devil Made Them Do It

Developed by Cinematix Studios, makers of the action game *Ion*, *Minesweeper*, *Forsaken* is a third-person, isometric, action RPG, which the designers acknowledge has been consciously inspired by

Diablo. They hope to improve on *Diablo*, though, by focusing on that game's biggest weakness: the lack of a truly immersive storyline.

Forsaken takes place on the island of Ahkullon, which is ruled by three brutal Warlords. You play the role of Locke (an homage to Final Fantasy VII), a member of a race of warrior mages who have long been disbanded and exiled from the rest of society. One of the warlords hires you to take revenge upon a cult group on the island that has slain his daughter in a ritual sacrifice. But as you might expect in an RPG, this is just the beginning of the story—and Locke soon discovers that the situation on Ahkullon is far different than he first realized.

At present, *Forsaken*'s most compelling feature is its incredible artwork. Canadian artist Den Beaulieu, well known for his cover drawings for *Dragon* magazine, is hand-painting all of the game's prerendered backgrounds. Beaulieu's early results show a game with a remarkably rich color palette—with lush greens and blues—an interesting change of pace from the dark look of most recent RPGs.

Eidos hopes to one-up *Dungeon* with *Forsaken: Thrall of Chaos*, a third-person, isometric, action RPG with a stronger emphasis on plot and dialogue.
Target Release Date: First Quarter 1998
Developer: Cinematix Studios
Publisher: Eidos Interactive
www.eidos.com

Unlike *Diablo*'s 2D sprites, *Forsaken* will use 3D polygonal characters with motion-captured animations (3D acceleration will probably be supported, but not required). These characters (also being designed by Beaulieu) will appear on top of the prerendered 2D backgrounds, with 3D collision detection underneath. The game also utilizes real-time lighting effects, including colored lights and changes from day to night—when we saw this running in the beta, it was truly beautiful.

Fantasy Island

Although the entire game takes place on an island, Eidos says there will be some 10 to 12 distinct locations, including cities, forests, underground caverns, and two castles. Conversation with NPCs will be a big part of the game, but there will, of course, be plenty of action. Each character will have spellcasting abilities and five weapon types with three attack styles. The best weapon in your arsenal won't always be the same for every player, but will depend upon how you have developed your character throughout the game. Character advancement will be skill-based, not level-based.

Whether Eidos's first-generation RPG will have the mettle to compete with big franchises like *Might and Magic* and *Ultima* remains to be seen. —Jeff Green

BRIGHT LIGHTS—Eidos's dynamic colored lighting effects help create a deep mood for late-night battles.

Your empire is flourishing.

Granaries are full. Technology is advancing.

People are prosperous.

What more could you possibly want?

At this point, an army might be useful.

To build a Stone Age tribe into a thriving empire, you can rest easy knowing that you can never rest easy. Because what takes thousands of years to build can be destroyed in seconds if you don't plan wisely.

In Age of Empires, your challenge is to take one of 12 ancient civilizations (including Egyptian, Yamato, and Greek) from grass hut beginnings to world domi-

nation in 10,000 years of real-time evolution. Which gives you just enough time to decide whether you want to conquer everyone else, explore the four corners of the globe, or accumulate great wealth to achieve

victory. And with a 100-node technology tree, you can choose your advancements accordingly. For instance, you can research gold mining or commerce

Microsoft

Where do you want to go today?

to amass great riches, or ballistics and naval warfare to strike fear into the hearts of others.

Multi-player capabilities, 40 pre-set

scenarios, lavish campaigns, randomly generated maps, and an expansive scenario editor make it a new challenge each time you play. Add in the rich 3-D graphics where you'll see every flaming arrow, marching phalanx, and charging

war elephant, and the pressure to win becomes downright intense.

But before you think you've got what it takes to win, make sure you've got the empire to back it up.

AGE of EMPIRES

Choose your favorite form of world domination.

Deep Six

D.W. Bradley, the Wizard of WIZARDRY, Returns With a Brand-New RPG

Virgin has never been known for its role-playing games, but next year, that's likely to change. For its first RPG, tentatively titled *DEEP SIX*, Virgin has at the helm none other than D. W. Bradley, the acclaimed RPG designer, whose most recent work includes *Wizardry V, VI, and VII for Slnitch*. Although the project is still far off (the release is projected for next spring) and Virgin wishes to keep it mostly under wraps for now, we were able to chat with Bradley long enough to get a sense of the game.

Set in a medieval fantasy world, *Deep Six* will be a party-based, traditional RPG, in which a group of adventurers sets out on a quest to retrieve an enchanted sword and soon finds itself on a larger mission to help defeat an ultimate evil: the Lord of Death. The game world will be completely 3D and will incorporate multiple settings, including forests, castles, dungeons, and an ancient temple that has sunk deep beneath the sea.

Bradley and his company, Heuristic Park, are designing the game engine from the ground up to incorporate both single- and multiplayer (over LANs and modems) in *Deep Six*, unlike in *Demos*, you'll

DEMON SEED This little biter from below is only one of the many monsters you'll face on your journey in *Deep Six*.

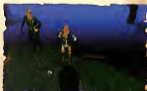

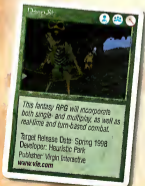

be able to build your character in single-player mode and bring him or her into a multiplayer game—and vice versa—in the hopes that you'll develop a character you really care about.

Most intriguing so far is the designer's take on the old turn-based versus real-time dilemma for the game's combat system. "I've talked to a lot of RPGers over the years," Bradley says, "and one of the biggest complaints from some was that they lost a lot of strategic decision-making in real-time combat, and felt like a mechanical monkey clicking the mouse. On the other hand, real-time gamers want a continuous world, where things are constantly changing. I needed a new approach that would eliminate the dichotomy between real-time and turn-based, and would let every user play the way he or she wants to play."

Bradley's solution is to offer the gamer a choice, available at any time—even during combat—between the two modes. Thus, you can move through the game in real-time, but if you encounter a particularly tough enemy, you can slow the pace to give yourself some time

to plan out your moves. Bradley says that the game will be balanced so that neither system has an advantage over the other and so that all gamers, regardless of preference, can get the same essential experience.

Trying to please everyone can be a tricky business, but Bradley says that he and his Heuristic Park team are "making the game that we, as role-playing fans, want to see ourselves." Given the designer's track record, we're going to want to see it too. Look for an in-depth sneak preview of *Deep Six* in an upcoming issue of CGW. —Jeff Green

YOU BE THE JUDGE Gamers will have it choice between real-time and turn-based gameplay.

Forgotten Realms: Baldur's Gate

Dungeons & Dragons Fans To Enjoy Relief From the AD&D RPG Drought

For years, *Dungeons and Dragons* fans could turn to their computers for role-playing excursions courtesy ofSSI. As the years went by, though, SSI's games lost their magic, and TSR went shopping for a new partner in computer role playing. It's been several years, but TSR has at last found a new partner, and the first RPG game to come of this liaison could be one of the best in a long while.

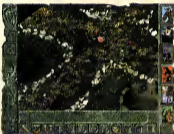

Your Adventure Begins

From Bioware, the designer of *SWATERO STEEL*, will come the first *Forgotten Realms* CRPG in several years, to be called *FORGOTTEN REALMS: BALDUR'S GATE*. The game, which Interplay will publish, takes place on the Sword Coast of Faerun, after the Avatar crisis of the *Forgotten Realms*, and chronicles your amnesiac character's quest to discover his or her origin. This personal quest, though, will intersect with a larger quest to halt a dark plan to resurrect a fallen evil that predates the Avatar crisis.

Bioware's employees are big *Advanced Dungeons and Dragons* fans and hope to make *Baldur's Gate* very story-driven. Sidequests will abound, and the game's mysterious plot will unravel as you visit key locations and talk to NPCs.

The game features a third-person isometric view and will doubtless beg comparison to Blizzard's *DIABLO*. Like many of the RPGs in this roundup, *Baldur's Gate* will boast impressive graphics, such as dynamic lighting and 16-bit color. There will also be special effects like fog and falling snow.

The combat, surprisingly, is real-time, despite the fact that the AD&D combat system is turn-based. Aside from that, say the designers at Bioware, all the AD&D conventions, including Thaco and die rolls, will be incorpo-

DARK TIMES AHEAD Baldur's Gate starts out with you getting to the bottom of trade disputes on the Sword Coast but mushrooms into a darker tale of evil.

rated into the combat, although many of them will be invisible to the gamer. What you will see is a fifth-level fighter hitting more frequently than a first-level fighter. For the very seriously reflex-impaired, Bioware plans a pause feature so that you can stop combat, issue orders, and then resume the game.

Dungeons and Dragons Returns

Since *Baldur's Gate* is an AD&D game, you'll be able to choose from among the many familiar character classes and races to create your onscreen persona. You can play only one character, but his or her makeup can be customized. You can be an elf, dwarf, halfling, fighter, or mage. You can also be a multi- or dual-class character. As a low- to mid-level adventure, *Baldur's Gate* will allow character progression to a maximum of sixth level. Sequels will let you import your character and advance to higher levels.

Don't worry about going solo in your quest, though. NPCs will join you and form a party. You'll be able to control them in battle, but they will also have their own interests and goals. In fact,

some members of your party may fight amongst themselves depending on your and their alignment.

In *Baldur's Gate*, unlike in previous AD&D CRPGs, alignment will matter. Rather than being forced to adhere to your chosen alignment, you'll be able to have an impact on your alignment through your actions. That alignment will also affect your meetings with NPCs and monsters.

Like any good RPG, *Baldur's Gate* will feature lots of spells, magic items, and monsters, and Bioware will have the advantage of being able to draw from

the rich AD&D rule books for those things.

Let's hope that the abundant background of the *Forgotten Realms* universe and the passion of the Bioware team can create an AD&D role-playing game that will rival—or even surpass—the old gold-box adventures of years past.

—Ennio Chen

Lands of Lore II: Guardians of Destiny

Westwood's Long-in-Development Sequel Has a Bit of a GoD Complex

Religion in most RPGs follows either the Christian standard of "one Supreme Holy One asks you to fight one Supreme Evil Lurking Down Below" or the polytheistic slant of "there are many gods around the world, and you help a few of them." Well, the newest RPG from Westwood Studios has taken a different slant on things, which is just one thing in its suite of features and improvements.

his favorite and causing massive wars with lopsided lighting (his race will always win with his help). The other Ancients have him executed, but before he dies, he creates a Mother Beast that will use the energy of the Ancients to resurrect him. Unfortunately, all the Ancients leave, and the Mother Beast is dormant for several thousand years.

This is where the original *Lands of Lore*, released back in 1994, stepped in. To recap, Scotia was a sorceress who wanted an artifact called "The Nether Mask" that would allow her to change shape and assassinate King Richard of Graystone. Little did we know that she had a son, Luther. And when you thwarted her in that earlier game, she tried to magically send the Nether Mask to Luther. What he got instead was the Nether Mask's ability to shapeshift, but no means of controlling it. Add to that the fact that the Nether Mask was an artifact of the Ancients, meaning its power was enough to resurrect Belial. Now that he has the power of the Nether Mask within him, Luther is caught between Belial's forces (who want to use it to resurrect him) and Gladstone's forces (who want to defeat Belial on their own terms).

New and Improved

Similar to the first game, you navigate the game world in first-person perspective, and combat in real-time. The main differences between the two games is that *Lands of Lore II* looks slightly better, and apparently you only portray one person. Rather than have a party like in the first one, you're on your own in this adventure

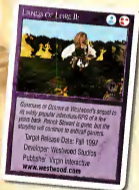

LANDS OF LORE II While a bit dated by today's standards, *Lands of Lore II* still has some nice graphics.

Differring itself from traditional role-playing games, *Lands of Lore II* is more plot-driven, which means it plays out a bit like an adventure game. You'll be talking to a lot of NPCs in order to make sense of your predicament and further the plot along.

The coolest part of the game is the curse placed upon your uncontrollable shapeshifting. Throughout the game, you will have to learn to live with this curse and control it. But until you do, you're doomed to randomly change into either the Beast or the Lizard, and wait for a while until you change back to human. The Beast is mighty but can't use weapons or spells, while the Lizard is more agile and magic-prone, but can't use weapons either. Morphing is random and can create some interesting situations.

LANDS OF LORE II is shaping up to be one of the more interesting RPGs to premiere this year. While the graphics are a bit dated (it is a year late), and it doesn't have earth-shattering new features, the familiarity of the game-world to fans of the previous game and its unique storyline make it one of the more promising titles to help the RPG genre get back into the game.

—Thierry Nguyen

The Newest TLA: GoD

When you read the basic plotline for *LANDS OF LORE II*, you'll wonder if the initials for its subtitle, "Guardians of Destiny," are a coincidence or not. For this sequel, Westwood managed to paint a very humorous treatise on gods and creation.

Here, we have a story about gods (Ancients) who take a "prime directive" when it comes to creating worlds—that is, they have a pact of non-interference with the worlds they create, allowing them only to observe. One of these Ancients, Belial, decides to fiddle with our world, making one race

Element of Certain Death

OUTPOST 2
DIVIDED DESTINY™

Earth is a distant memory. All that remains is a handful of humans who chose to follow you to the stars. Getting here was the easy part. Now you must battle time, nature and hell the human race to save your people from certain annihilation. Survival is just the beginning.

SIERRA

Quest for Glory 5: Dragon Fire

Sierra Returns to Glory With One of Gaming's Oldest RPG Franchises

The original Quest for Glory was an immensely popular role-playing game. It had stats and spells, but it also combined classic Sierra adventure game elements with intense combat. After the success of the first title, the series grew to encompass three more games, set in various fantasy locales based on the Middle East, Africa, and Tarsylvaria. While the quests, monsters, and environments changed from game to game, the main character and a few nonplayer characters did not. Moreover, an overarching plot was weaved into each game, meaning that a continuity was achieved that compelled you to play each successive title. It's been a long four years, but, at last, the final game in the series is about to debut: Quest for Glory 5: Dragon Fire.

A Mediterranean Holiday

You reprise your role as the hero (always nameless), and have ventured to the land of Samaria, a Mediterranean-type environment.

EN GARDE Combat now occurs in the game world, rather than on a separate screen. Before, combat was a little jarring, but now it's seamlessly integrated.

IN HONOR OF THIEVES There aren't levels in Dragon Fire, but, rather, skills that you advance through with frequent use. As a thief, you could practice pickpocketing on this dummy.

The kingdom has just lost its ruler to assassination, and monsters prowling the land whilst a great black dragon looms over the horizon. Lori Cole, the designer of all previous Quest games, is hinting that this could be the finale of the series, so the story will tie up all loose ends, and gamers will finish the game with a feeling of completion.

Many of the previous games' NPCs will return for this encore, including Raikesh the liontamer from Quests 2 and 3, Katrina the vampire from Quest 4, and Erasmus, the wizard who taught you spells in Quest 1. However, as a new game, Quest 5 will thrust you into a whole new environment with its own share of brand-new faces. As with other Quest for

Slow games, Cote promises to deliver characters with personality, as well as plenty of humor and even romance in the story.

Stats and Skills

Like previous Quest games, you'll be able to choose from three classes: wizard, warrior, and thief. You will be able to import your characters from previous games. *Dragoon Five* isn't level-based, but skill-based. You have standard attributes, such as strength and intelligence, as in other games, and a variety of skills. You'll have a different set of skills depending on your class, such as pickpocketing for thieves, spellcasting for wizards, and defense for warriors. You can increase your skills through normal use or practice. For example, in the Thieves Guild, you can practice pickpocketing on the dummy and advance your skill level. If you fight constantly, your weapon skill will automatically increase. Continuous spellcasting will also improve your spell skills.

The game does change depending on your class, as you'll have to defeat major enemies according to your skill set (through trickery, spells, or combat). As far as spells, there are

LIGHTS OUT As in previous games, time will pass, so you can adventure during both day and night. Some actions, especially thievery, can be performed only at night.

quite a few, including fireball, levitation, lightning bolt, open doors, protection, and flight.

To Be King

In the tradition of the series, there will be several subplots to play through before the final showdown with evil. After the king has been assassinated, you and two other heroes come forward to compete for the right to take the crown in the Rites of Rulership. These Rites will take you through the game's various quests and subplots. You'll have to stem the invasion of a neighboring kingdom, battle the monsters in the beleaguered Kingdom, thwart an army of undead from the dark realm of Hades, defeat a monstrous Hydra, and discover the sunken city of Atlantis. Ultimately, though, the dark hand that has guided all these evil forces will throw its last menace at you: the black dragon, Fire.

The biggest change in the series, apart from the much updated graphics and beautiful pre-rendered environments, is the combat. It is no longer played in a separate screen that draws

you out of the game world. Now, combat occurs in the adventuring environment in real time.

The other big change is the inclusion of multiplayer support. You can actually play through the whole game with up to two other characters. Presumably, each of you will play as one of the three contestants in the Rites of Rulership. There will be support for modem or LAN play.

Quest 5 still needs to be polished; game speed is fairly slow now, but Sierra does plan to optimize the game. Also, while we've played a little of the game, we still haven't seen the full quests, Rites, and NPCs. However, if Sierra can implement these elements as well as they did in previous Quest games, all the while polishing the game's speed and look, *Dragoon Five* should not disappoint. As the probable last entry in the Quest run Quam line, you'll meet old friends and finally make your way to the promised land of Slimeria. With an improved, integrated combat engine; a variety of locales to visit; and numerous quests and monsters to surmount, Quest run Quam 5 could prove to be the best of the series. —Elliott Chin

SPLASH The Queen of Atlantis is only one of the various creatures you'll meet.

SUNKEN TREASURE Here is a look at the Atlantis environment in *Dragoon Five*. The environments are beautiful scenes that will be populated with 3D objects.

Dark Earth

France's Kalisto Reveals the Art of Darkness

You see it the first time you move from one room to another. The colorful room with its stylized Jules Verne architecture and the primary character in his brightly adorned uniform are both swallowed by darkness. *DARK EARTH* is a study in contrasts: light/darkness, good/evil, freedom/fear, initiative/ritual, humanity/monstrosity, and life/death. Just as Francis Ford Coppola used sharply etched shadow to suggest the fearful majesty of the Godfather's hidden power, *DARK EARTH* uses the backdrop of an all-consuming darkness and its corresponding images to shape its universe.

DARK EARTH takes place in a postapocalyptic world in which mankind has experienced near-obliteration. So much debris fills the air after this cataclysm that perpetual darkness shrouds the world; poisonous clouds drift overhead, and photosynthesis has stopped. Only a few pockets of light remain. Into these pockets have flown the uncontaminated remnants of humanity.

PERCE OF DARKNESS You'll experience close-ups of the action as you know, fight, die, and smash your way to success in *DARK EARTH*'s combat sequences.

Dancin' in the Dark

For the most part, the game is extremely easy to navigate. You use arrow keys to move around, the space bar to use objects or initiate conversation, and the C key to enter combat mode. Combat is in realtime and can be set for easy or tough battles. Once in combat mode, you press Ctrl and hit the arrow keys for your various moves.

All of the characters are 3D, and the game contains numerous attractive 3D objects. However, rooms are not connected for pure 3D scrolling, and there are times when objects such as staircases are not fully implemented as 3D, leading to some awkward animated sequences in which the characters do not mesh perfectly with the environment.

Of course, you might wonder why Kalisto opted for 3D figures and objects if you aren't viewing the action in first-person and you can't scroll smoothly from one room to the next. The beauty of the 3D art is that whenever you enter combat,

First, they build temples to Ra, the Sun God. Then, entire cities (called Stalites) rise up around these temples. Entire social structures evolve out of the need to maintain light, heat, and genetic purity.

Two elite groups rule this light-oriented society: the priestly Sunseers and the military Guardians of Fire. In the best of all possible setups, your character is a Guardian of Fire named Arlian, a policeman trained for immediate action and the son of a Sunseer named Rylsedaar—you are sensitized to the history, myth, and dynamics of your culture. In the worst of all possible situations, you are soon thrust into a situation where the bulk of this cultural structure stands against you.

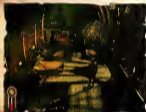

In this postapocalyptic role-playing adventure you play a Guardian of Fire attempting to save all the contamination of your society. Eventually, you become a part of that contagion.

Target Release Date: October 1997
Developer: Kalisto (formerly Milekapsa Continuum)
Publisher: Electronic Arts
www.kalisto.com

DARK ABIGIS Monuments from an earlier era guide you through the cultural background of the Dark Earth universe and provide vital clues for the endgame.

DARKOVER Whenever you see the symbol of Ra on the wall, you can save your game of Dark Earth.

this is the old FMV problem (read: lack of control) all over again.

Stallite 19

Dark Earth has an extremely well-conceived storyline. You start with a clear-cut concept of light versus darkness and good versus evil. Your first combat pits you against murdering guerrillas who have invaded the sacred confines of the Temple of Ra and do not hesitate to slaughter the Sunseers. Unfortunately, when you defeat the first lot, you find yourself caught in a vain attempt to rescue Lory, the greatest of the Sunseers, only to end up being contaminated by a black, porous, ice-cold parasitic ooze called Shankir Archseance.

This substance, you soon discover, causes you to slowly transform into one of the mutant creatures of darkness from which you have always protected society—and now, your fellow Guardians of Fire are out to get you. You learn that you must locate your father and get him to show you a hidden crypt wherein lies the secret to your healing. Your own Stallite becomes a prison to you as you try to free yourself—and the world around you—from the danger.

As events unfold around and upon you, you learn the wisdom of a statement propounded by an old priest: "Night is an ordeal feared only by the impure." You discover that a perfectly ordered society may not be quite as perfect as you once thought.

Of course, this penetration into deeper and deeper shades of gray is exactly what design director Guillaume Le Pennec is striving for: an attempt to portray prejudice and fear (in/pardon the pun) an entirely new light. Kelso adds just the right touch of moral ambiguity to Dark Earth to stimulate the imagination and compel you to keep playing.

In terms of story, game world, and artistic touches, Dark Earth is an objet d'art. As a game, it is even having some success as a pen-and-paper role-playing game in France (Cetus Bell), the marvelous French role-playing magazine, gave the pen-and-paper game a positive review and is currently publishing additional scenarios.) Whether the combat and puzzles are enough to carry it as a computer game remains to be seen. The puzzles are lighter than the typical adventure game, and the combat doesn't have quite the subtlety of a pure action game. It's a nice balance for some, but may seem too lightweight for others —Johnny L. Wilson

DARK SECRETS You manipulate weapons and objects in Dark Earth via an inventory screen that is strictly click, drag, and drop.

you get fast action, smooth animation, and plenty of camera angles. At first, this might seem disorienting, but as you play the game, you realize that the close-ups, pans, and over-the-shoulder views add to the excitement of each encounter. Easy mode will prove to be too much of a cakewalk for action gamers, but its inclusion means that even those who don't care for action sequences can get through the game without dying.

Gameplay consists of combat and conversation separated by the occasional puzzle (of the find-the-right-object-or-information variety). Successful combat sequences, appropriate conversations, and the mere zen of being in the right place at the right time lead to cinematic cut-scenes with intriguing camera angles, impressive graphics, and visceral levels of violence. The downside of the design is that your conversational options are predetermined by the attitude you adopt in an out-of-interlace setup screen. The conversations play more cinematically this way, but some gamers may feel that

Company's Coming.

Resource management, unit transport, arsenal development and technological research are just a few of the dynamic game play features in this multi-player clash.

A nonlinear mission structure creates a strategic edge over other combat-strategy games.

21 adrenaline-pumping missions, each with their own terrain and objectives, plus a mission editor included as a free bonus.

Vivid super VGA graphics paired with a sizzling soundtrack put you in the Alliance Commander's chair to unity or wage war against alien races.

The most lethal aliens in the universe are on a manhunt and your star system is their next stop. Experience real-time combat strategy in **Final Conflict**, the ultimate intergalactic battle.

Exile III: Ruined World

Questing the Old-Fashioned (and Inexpensive) Way

This game from Spiderweb Software—appearing on our CG-ROM this month and available as a download from Spiderweb's Web site—has been a big hit among roleplayers for months, almost entirely because of word-of-mouth on Net newsgroups.

Exile III is the third game in Spiderweb's epic tale of the struggle between the Empire and the Exiles. In this game, after years of a stalemate, the Exiles have found a way to reach the surface, and you and your party are sent to explore.

At first, the game looks exactly like what it is—a shareware game with primitive graphics. But if you keep playing, you'll discover a

remarkably deep, traditional RPG far more complex than its appearance would indicate.

Character creation is very flexible—you can even assign disadvantages such as "magically inept" or "bad back," which will affect how much experience you need to advance levels. Combat is turn-based, the spell system—divided into two classes—is deep, and the ample dialogue with NPCs is well written and witty throughout. Rounding out the game are elegant touches such as an automap and a journal that automatically keeps track of your quests.

Jeff Vogel—Exile's designer and programmer—has created an RPG "like they used to make." And it costs only \$25 to play.

—Jeff Green

Grimoire

A Classic Computer Role-Playing Game From the Net

Two classic computer game references popped immediately to mind when I first booted the alpha version of GRIMOIRE, a CRPG available only via the Internet. The first was MIGHT AND MAGIC. In Grimoire, you constantly explore the world via a 3D first-person window—just as you did in the original MIGHT AND MAGIC (and WORMS before it). The second was ZOAX. Remember that maze of look-alike passages? You're always in a maze in Grimoire—at least in the parts we've seen.

If you like the character classes of classic role playing, you'll immediately find yourself comfortable with the Adepts, Clergemen (humanoid player characters evolved from other biological strains), Conjurers, Guardsmen, Pickpockets, and Traders

to be found in Grimoire. You'll feel comfortable with the skill sets and the career paths that are available. Most gamers will enjoy the many combat options at their disposal: Hide, run, shield, fight, cast (spell), use (artifact), or surrender.

Also in the classic vein is the background story for Grimoire. You outfit a party to quest in search of the "Metronome Mystrum," the so-called Clock of Fate that winds down into enigma and portends the end of the world. Instead of trying to "kill Fozzie," it's the party's task to find the cosmic pendulum and rewind the clock that ticks off the world's fate.

Grimoire has solid potential and may be just the urgent necessary for long-time role players who want more than real-time, first-person dungeon crawls. It may also prove the worth of online distribution for independent designers and publishers. —Johnny L. Wilson

Online RPGs

While the online revolution may not have happened yet, it is getting more interesting out there for gamers—and for role-players in particular. Here are a few of the more promising upcoming online RPGs.

Ultima Online

Of course, no RPG guide would be complete without mentioning the ultrahigh-profile Ultima Online, the online RPG with the potential to

its servers? There's no reason to be pessimistic, but, after writing about this game for more than a year, we're going to stop saying "It'll be out soon." Now we'll just say we hope it's out soon. Lord British, your greatness, your subjects are ready to play.—Jeff Green

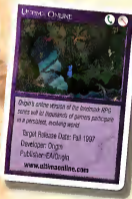

Meridian 59: Revelation

Meridian 59 may not get the same attention that Ultima Online is receiving, but 3DO's Internet-based RPG has boasting rights for one huge reason: It actually celebrates its one-year anniversary this October. In that year, the game's thousands of fans have created a living, breathing alternate universe, and the developers have continued to tweak the game with upgrades and expansion packs.

Now, 3DO is readying the biggest upgrade yet, called Meridian 59: Revelation, which is essentially an entirely new version of the game. Ous this fall, Revelation promises to improve or expand virtually every aspect of the game. On the aesthetic front, the developers have completely redesigned the interface and upgraded the first-person graphic engine to keep up with the times. Player and monster graphics have also been improved, and they've tweaked the monster AI so that monsters can now ally with each other in combat—or be tarmed by you to fight on your side.

3DO has added tons of new quests and side-quests, and promises to make the experience more "game like" for those seeking more than just a MUD-like social hangout. The team has created an entirely new island city complete with a race of beings with their own culture and language. The overall quest in Revelation involves traveling to this island city and uncovering the mysteries therein. But it won't be something that any random newbie just logging on can join. Newcomers will need to explore the existing world of Meridian 59, gaining strength, experience, and magic, before they're strong enough to deal with the new land. This will keep the game friendly enough for new users, while giving longtime gamers a brand-new challenge for their already battle-toughened characters.

A host of new weapons and more than 100 new spells to master round out the changes to this already hugely popular online RPG. Whether new players will discover the game amid all the

either soar into gaming greatness or take a Willie Coyote nosedive. Given the publicity surrounding the game, it has turned into a real event—and if Richard Garriott and the folks at Origin can pull it off, it will be a stunning achievement. As of this writing, Phase 2 of the public beta test was taking place, and we had hoped to have a play report here. But in a week of trying, we were unable to log on. Typical beta problem or a sign of difficulties to come? Will the game finally be up and running when you read this, or will Origin still be kicking all the bats and chipmunks out of

noise being generated by Ultima Online remains to be seen, but Meridian 59—as of this writing, anyway—has one ineluctable competitive advantage: It's up, live and running.—Jeff Green

Is the sudden resurgence of computer RPGs attributable to their popularity online? Stephen Poole examines this question for GameSpot saying, "Many developers believe it's the Internet's ability to allow gamers to role-play together that's moving the genre back into the limelight." Get the whole story, and take a look at 15 upcoming online RPGs on GameSpot's Guide to Online RPGs.

Asheron's Call

A surface glance at *ASHERON'S CALL* will give you a sense of déjà vu. The first pages you see look a lot like an updated *Wizardry* with

WHAT A CHARACTER You'll build your own custom "character classes" from the wide assortment of skills and heritage groups available in *Asheron's Call*.

more character skills. A second look shows you that the view in the familiar window offers real first-person in 3D and an option for going full-screen with the action window. A deeper look reveals that the game does not restrict

you to the traditional "character classes" of earlier role-playing games (bards, wizards, fighters, thieves, druids, and the like), but allows you to tailor a skill set at will. So, if you want to build a dreamlike character drawn from Michael Moorcock's *Foreword of the Pearl*, you can create a reasonable facsimile based on skill selection, even if he/she doesn't have exactly the same skills as in the book.

Experienced RPG players will love the flexibility.

Peer even more deeply and you discover a sensitivity that's often missing from RPG worlds. Most games use the idea of race to create distinguishing characteristics and attributes in both player and nonplayer characters. Yet

the very use of race in this way can be divisive. Rather than serve as the underpinning for stories that help us understand and improve the situation (*Jurassic VI* is a sterling exception to this rule), such fantasy-based racism can sug-

Asheron's Call offers online multiplayer integration in a complex, dynamic social environment where politics are as important as combat.

Target Release Date: First Quarter 1998

Developer: Turbine Entertainment

Publisher: Microsoft

www.microsoft.com

gest that some races are subhuman. Much as we may protest that these are only games (see this month's editorial), the idea of innate superiority/interiority can subtly lead us into real-life discrimination. *Asheron's Call*, instead, very sensitively labels the variety of cultural backgrounds found in the game as "heritage groups." Such a designation offers a nonhomogeneous population for the game world without emphasizing racial stereotypes (whether drawn from reality or fantasy).

As you continue to view the game, you realize that this is an RPG with true beauty and originality. Social interaction in *Asheron's Call* is "intelligence-based." This means that your actions and social standing, as well as the overarching social dynamics in the world, are based on the groups to which you belong, and their agendas. The agendas are, in turn, established and evolved by the player characters themselves. The design team will occasionally plant seeds for a given agenda, but the players can opt to go with the seeds or not. The social design of *Asheron's Call* may well be the most intricate ever in an online role-playing experience.

A final inspection shows that *Asheron's Call* has been designed for the Internet from the ground up. The design structure itself reduces data handling and, hence, the effect of latency. We were amazed at how smoothly the game worked using a remote server. Of course, we haven't yet tried this massively multiplayer game.

CATTLEPULT ANYONE? An early screenshot promoting *Asheron's Call* portrays benign cows on the screen as though they were monsters.

Skies

Imagine a fantasy world of cloud castles and floating islands. That's the setting for *Skies*, Segasoft's persistent role-playing game of winged creatures, set to debut in mid-1998. You'll choose from among angels, demons, dragons, and other winged creatures to play, but they won't be the images you know from popular fantasy culture. Dragons might not necessarily breath fire, and an angel won't always be good. Gamers will have the opportunity to customize their characters in unique ways so that each player character will be very different from the next.

Characters in *Skies* will be skill-based, as in *Ultima Online*, not level-based. As you develop,

your appearance will also change, meaning that players will be able to tell at a glance how powerful you are. The game world will comprise various locations above and below ground and in the sky. Segasoft also says that these locations will change dynamically according to your and other players' actions.

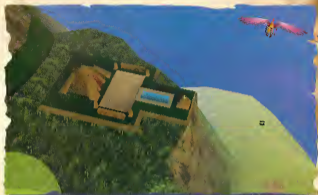

Segasoft is pushing its transactor technology as a prominent feature of *Skies*. Though we have yet to see it in action, transactors are digital objects that are serialized and attached to specific characters. These transactors can be abilities or objects, and players will be able to customize their powers using these transactors. Your own character will be a transactor, called a LEDO (Limited Edition Digital Object), which you can trade with others. The transactor technology enables an open-market economy in which LEDOs and transactors can be bought, sold, and traded according to the demands for

Skies promises to be, concept-wise, the most original RPG in years. It takes place in a fantasy world's skies, and puts you in the role of angels, demons, dragons, and other winged creatures. Target Release Date: Mid-1998
Developer: Segasoft
Publisher: Segasoft
www.segasoft.com

and scarcity of objects in the *Skies* gaming population. Segasoft hopes that the dynamic will be similar to the card game *Magic the Gathering*, with transactors being the cards that build your LEDO, or hero.

The game is played in third-person, and the graphics should be good. Segasoft has employed the talents of Michael Turner, cocreator of the comic heroine *Witchblade*, to develop the characters and monsters in *Skies*. —EVOY Chan

SKIES THE LIMIT Segasoft hopes to lure you into its persistent-world, online RPG with the chance to roam among the clouds of a fantasy world.

ANGEL EYES The fantasy creatures in this world won't necessarily follow the attitude set by Tolkien. Expect surprises.

CIRCLE READER SERVICE #149

The Five Greatest Computer Role-Playing Games of All Time

If you had to name the five greatest computer role-playing games of all time, you would probably pick the ones we've selected (or other entries in the same series). We've provided the complete games for these five RPGs on this month's CG-ROM. Play them for yourself and see if you don't agree with our reasons.

ULTIMA IV

When Richard Garriott decided to put virtue in Ultima IV, he wasn't satisfied with preaching a static morality. He wanted, from character creation onward, to confront the gamer with moral dilemmas, challenging choices, and a powerful story. With the concept of avatarhood, Garriott succeeded in doing what many other role-playing games had failed to do: Cause gamers to think about real life in new and different ways.

WASTELAND

With a story by Mike Stackpole (of *BattleTech* and *X-Wing* novel farms) and maps by Liz Danforth, Ken St. Andre, and others, *Wasteland* emerged as an epic game of postapocalyptic combat, mystery, and puzzles. For the first time,

gamers found that they couldn't necessarily count on nonplayer characters to share ammunition, take the point, or perform dangerous deeds in order to save the rest of the party. Other nice touches included Danforth's infamous "rabid dog" scenario, in which you were forced to pay the consequences of your deed.

BETRAYAL AT KRONDOR

This game wasn't special just because it brought Raymond E. Feist's Midkemis to life on the computer screen, although that might have been enough. It was the first adventure game to try to give you a 3D first-person feel (even though some of the characters look like paper dolls pasted onto the environment). It also offered a very fresh and new magical interface that worked wonderfully and fit the Midkemian milieu perfectly. All in all, a great game with solid balance and lots of surprises.

MIGHT AND MAGIC

The first game in a hugely successful series, *Might and Magic* redefined the term epic. It had the largest map of any fantasy RPG up to that time and featured the most upscale documentation for

its era. Most of all, it had great pacing as you maneuvered through intricate mazes in breathless suspense, a tremendous amount of hack-'n'-slash combat, a wide sampling of magical spells, and a simple, yet charming story. The graphics have improved over the years and its progeny, *Might and Magic VI*, promises to offer another fresh perspective with its 3D graphics and architectural styles, but there's something special about the original. It's tough, but worth it.

WIZARDRY VI

To many gamers, the *Wizardry* series as a whole could fill any list of the Top Five RPGs of All Time. It was the first maze-view dungeon crawl and offered deep and challenging role-play at a time when many computer games were merely stickman versions of Hack, a mainframe hack-'n'-slash game. *Wizardry VI* stands high as the first game in the series to blend fantasy and sci-fi into its realms and the first *Wizardry* game to offer full-screen color. Some gamers would argue that *Wizardry IV* is the best, given its diabolical puzzles and the opportunity you have to play the villain, but we chose *Wizardry VI* as the most accessible *Wizardry* yet available.

Crystal Ball

Gazing further into the future, your RPG soothsayer sees a number of promising titles on the horizon. We predict that about the time you read this, you'll be hearing an announcement about *Dawn 2*—though Blizzard won't confirm this as we go to press.

Last month's E3 roundup reported that Sir-Tech was working on *Wizardry VIII*. While this is still true, we have since learned that it will be a fall 1998 release—at best.

Finally, rumors abound about *Ultima IX*. Lord British and his minions at Origin all promise that this is still going to happen, but the immense difficulty of developing *Ultima Online* has pushed the single-player game back to the point where no one is talking dates at all.

An early screenshot from *Wizardry VIII*, which Sir-Tech is promising for a late '98 release.

Same Time...

...Last Year

The New Generation of 3D Chips Comes of Age by Loyd Case

In the computer-gaming business, there's a hot new topic every year. 1996 was supposed to be "The Year of 3D Acceleration." Uh-huh. Sure.

Don't get me wrong, there were some interesting point products. Boards using the 3Dfx Voodoo chipset stole the show with their stellar performance and image quality. Rendition proved you could have solid 3D performance alongside reasonable 2D- and SVGA-graphics performance. Cirrus using the S3 WRAGE chip proved you could slap "3D"

onto the box and sell a lot of cards despite underwhelming 3D performance. Matrox proved there was a market for 2D/3D accelerators that left out certain main stream 3D image quality features.

The hardware was there. It was the software that came up missing. For months, the only accelerated software titles out there came bundled in the same box with their graphics cards. A few titles shipped that offered support for a specific chip, but because Microsoft shipped Direct3D late, and because Direct3D proved somewhat difficult to use, titles have only just begun to hit store shelves.

Despite this dearth, a lot of 3D cards were sold. One reason was the huge consumer education effort undertaken by many 3D vendors.

Another reason was the huge success of the 3D-accelerated versions of Quake—first, Rendition-accelerated VQuake proved that you could have significantly enhanced image quality and a good frame rate, then GL Quake arrived on the scene with its superb lighting and transparency effects.

Another showcase title was *Tomb Raider* from Eidos, with its beautiful, motion-captured virtual action diva, Lara Croft.

Enter the Hardware Onslaught

Soon we'll have a host of hot 3D iron, as well as some seriously accelerated 3D titles. If last year was the beginning, 1997 is the arrival. With any luck, 1998 will move along at warp speed. If you read our July 1996 issue, some of the 3D techno speak covered here is probably old hat by now, though we'll also tell you about some new developments of interest. But if you're just beginning to get versed in 3D, then this will be a good place to get started.

Evolution of the Revolution

In the summer of 1996, 3D accelerators began to arrive in quick succession. Last year, we tested quite a few 3D cards, and a year ago a lot of these cards looked pretty good. There were no reliable benchmarks on the market, DOS games were still king, and the handful of Direct3D games out were not very good at measuring performance.

The landscape was divided up into the mainstream players, the upstarts, and the dedicated 3D chips. The mainstream players—ATI, S3, and Matrox—delivered last 2D cards, but had

BILINEAR FILTERING Makes a texture map appear more realistic by averaging the color values of adjacent pixels. This blurs the pixels, reducing the blockiness when viewing the texture up close. If a board doesn't support this feature, you'll get point-sampling (on the left).

FOG EFFECTS Blending objects in the distance with a fixed color yields a haze or foggy appearance. If a chip doesn't support fog, it'll be pretty obvious. But looking at the image on the right, you see that fog can add tremendously to the overall effect in a game scene.

PERSPECTIVE CORRECTION Perspective correction makes texture maps correctly converge at a given distance, giving them a more realistic appearance when viewed from different angles. You can see in the shot on the left that without this feature, things can get just a bit skewed.

mixed 3D performance. The upstarts included Rendition and NVIDIA. NVIDIA's NV1 chip hit the market first, in Diamond's Edge 3D, and attempted much—trying to deliver sound and joystick support as well as graphics—but delivered too little. The Rendition V1000 series had some limitations, but proved that a combination 2D/3D accelerator could pack a solid 3D punch without giving up much 2D performance. 3Dfx and VideoLogic took radically different approaches in bringing dedicated 3D accelerators to market. The 3Dfx Voodoo chipset delivered stunning performance and image quality using a more traditional rendering pipeline. The PowerVR chip took a more radical approach that eliminated the need for frame-buffer memory, but suffered Direct3D teething problems (see this month's review).

All of these players are poised to deliver new chips that promise significant increases in rendering performance. After wandering in the wilderness, NVIDIA has stormed back with the RIVA 128, a chip focused on just three things: hot-rod 3D graphics, superb 2D graphics, and digital video acceleration. Rendition is set to deliver the V2200, which will offer a 3X performance increase in 3D and serious 2D and video features—all the while maintaining compatibility with the V1000.

VideoLogic is bringing the second-generation PowerVR chip, the PCX2, to the forefront, while 3Dfx has given users a real Rush—Voodoo Rush, that is. Even mainstream stalwart ATI is poised to bring a potentially hot performer in the form of the Rage Pro—its third generation of 3D accelerators and probably the most innovative architecture it has done yet.

Then there's software. While the controversy over the Direct3D versus OpenGL issue looks like a Tyson-Holyfield brie...er...bout (see sidebar), scores of Direct3D titles are set to be delivered this fall. OpenGL isn't left

out, though, since games based on the Quake engine will all support OpenGL, and some of them promise to be blockbusters.

It's the Experience, Stupid

It's easy to overlook the fact that 3D graphics isn't an end in itself but, rather, a means to deliver an immersive experience. Recently, we booted up the Direct3D version of *MechWarrior: Mercenaries* on a Monster-3D card and were sharply reminded that it's the experience that counts. *MechWarrior* is almost a different game using Direct 3D, with night battles taking on an eerie feel as laser bolts and missiles light up the darkness. Aiming seems much easier, and the ground looks a lot more real when you fall over after one of your mech's legs gets blown off.

Several factors contribute to an immersive experience. Certainly, frame rate is critical. The prettiest image quality is pointless if the game looks like a slide-show. On the other hand, if you can average a solid 25-30 frames per second with the kind of image quality that 3Dfx delivers, 40fps of blocky, pixelated scenery suddenly loses its appeal. So you need to weigh both issues: Look at the claimed image quality delivered by the 3D hardware and the frame rate actually delivered by a variety of games. Benchmarks like 3D WinBench help, but it's really the games that tell the story.

Next month, we'll take a look at a variety of 3D accelerators and test them with several game titles, as well as 3D WinBench.

Most accelerators support a variety of 3D features. The minimum set you need to look for is perspective-corrected texture mapping and point sampling. However, we believe quite strongly that bilinear filtering adds a lot to the mix, and MIP-mapping (see glossary) improves image quality, particularly in games with lots of movement across distance. Good transparency effects are rapidly becoming a must (think of the water effects in *GL Quake*). And fog effects can add that last little bit of verisimilitude—climbing to the top of a foggy hill in *Menzobables* really keeps you on your toes.

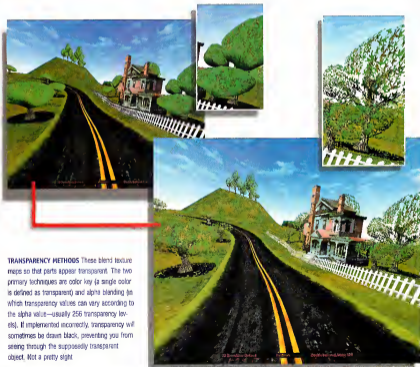

Finally, don't discount the performance of the CPU. There's a myth going around that a fast 3D card will make up for a slow CPU, but as our CPU testing last month indicated, that's not the case. Yes, a 3D accelerator will help an older system keep up with some games, but there's still a lot of geometry being calculated by the processor in order to give the accelerator something to render.

Things to Come

Next month's graphics card roundup will consist exclusively of 3D-capable hardware. We have a number of very cool cards on the way, including your first look at several new AGP boards. Here's just a taste of what's in store:

- Boards from Diamond and STB, using NVIDIA's new Riva 128 chip
- ATI's new Xpert@Play, using ATI's new Rage Pro
- Two boards using 3Dfx's Voodoo Rush chipset from Hercules and Intargraph
- Hercules' and ELSA's new Permedia 2-based boards
- VideoLogic's Apocalypse 3DX and 5DX, using NEC/VideoLogic's PowerVR chip
- Matrox's new Mystique 220, plus a new 3D surprise they've got in the works
- Number Nine Revolution 3D

We'll also give you an early look at 3D iron still in development, including Rendition's V2200, Tritech's Pyramid3D, and Oak Technology's Warp 5 chip.

TRANSPARENCY METHODS These blend texture maps so that parts appear transparent. The two primary techniques are color key (a single color is defined as transparent) and alpha blending (in which transparency values can vary according to the alpha value—usually 256 transparency levels). If implemented incorrectly, transparency will sometimes be drawn black, preventing you from seeing through the supposedly transparent object. Not a pretty sight.

Gory Combat Action: Brimming with 170 horrifying enemies and 21 demented spells — each with a unique bloody graphic.

Epic Production: A staggering 100,000-plus screens and 120 hours of blood-spraying adventure enhanced with 25 grisly minutes of full-motion, 3-D animation.

You can
almost
taste it.

You were once an innocent man. But having been brutally slain and banished to Hell has put a bad taste in your mouth... You are Kain — damned to the savage existence of a vampire for all eternity. Revenge consumes you as you journey through the depraved lands of Nosgoth in search of your murderers. Quench your desire for vengeance with the blood of innocents in real-time. Morph into Wolf, Bat, Vampire or Mist to slaughter those who stand between you and those who wronged you.

Revenge...nothing is sweeter than the blood of your enemies.

Vampire Bloodfest: Drink the blood of your victims, then morph into one of four sinister forms to escape — vampire, wolf, bat or mist.

Direct3D versus OpenGL: The Debate Rages On

by Dave Salvatore

Microsoft undertook a major initiative about two years ago: To build a global 3D graphics Application Programming Interface (API) that high-performance games could use and 3D chips could accelerate. Dubbed Direct3D, this API would let game developers write their game code once and have it run on anyone's hardware, and hardware guys could write one set of drivers, meaning that most game titles would then run on their hardware. A great idea. A needed idea. So why has there been so much flak about this API? And what's all this about OpenGL being a viable API alternative for 3D game development?

Before its current incarnation, Direct3D was Reality Lab, a software-based (CPU-only) 3D API. Since Microsoft bought RenderMorphix' API and rechristened it Direct3D, it has undergone the growing pains of learning how to talk to 3D accelerators—something it wasn't accustomed to doing. Most graphics vendors had been focusing their efforts on fast 2D performance and had to quickly come up to speed on 3D. To allow them some breathing room, Direct3D implemented a feature known to programmers as "capabilities bits." Using caps bits, programmers could ping a 3D accelerator's driver to see which 3D acceleration features it supports, use the ones it does, and disable the ones it doesn't. This allowed graphics vendors to more gradually implement their 3D acceleration features, rather than implement everything at once.

So why the ruckus? One inherent problem with "universal" APIs is what's called API overhead, which tends to cause something of a least-common-denominator effect. The result tends to be more detrimental to stronger performers, meaning that the not-so-hot chips can come to the party too. Another issue was the sheer difficulty involved in using Direct3D, which Microsoft has recently tried to address in DirectX5.

Combine these factors and the fact that several graphics companies are effectively marketing their own "straight to the iron" APIs to game

vendors along with the lack of competing Direct3D titles, and you have a situation where no one is happy. Enter OpenGL.

A Knight in Shining Armor?

OpenGL is a road-tested, feature-complete API that some game developers are considering as an alternative to Direct3D. SGI, a maker of high-end graphics workstations, has taken up the cause of making OpenGL a viable alternative for developers who don't want to use Direct3D. Id guru John Carmack used OpenGL to create GL Quake, which has greatly fueled this ongoing debate because it showed that compelling games could be written using OpenGL. But Microsoft quickly countered by running GL Quake—with some code tinkering—on Direct3D.

A consortium of game developers, led by Chris Hecker, asked Microsoft to incorporate OpenGL as the "guts" of Direct3D, and adopt it as the 3D API for games development.

Microsoft balked, stating that its focus will be to make Direct3D its premier games API. Microsoft asserts that OpenGL isn't the ideal platform for action games in which frame-rate takes priority over accuracy, but the developer consortium contends that they want a choice as to which API they'll use to create games. SGI has stepped into the breach and announced that it will supply a hardware interface kit with which hardware makers will be able to implement OpenGL acceleration in their parts.

It Comes Back to Content

Where is this all headed? It boils down to which platform will have the most top-shelf games. Microsoft has a head start, and despite the early shortage of killer titles, the picture will be much rosier for the holidays, with Jim Knier, Sune Ace, and Unreal all nearing completion. OpenGL has one feather in its cap: Quake; plus all titles written using the Quake engine. Many developers are looking at OpenGL; and SU-27 FLANKER and WinBros 2.0 will support it. ☞

3D Glossary

There's a whole new jargon that comes with 3D graphics cards. Here's a brief rundown of the most important features.

CLUT COLOR LOOKUP TABLE A method of creating texture palettes, which is a form of texture compression (by reducing the amount of memory they need). Sometimes used in the absence of bilinear filtering.

EDGE ANTI-ALIASING Gets rid of "jaggies" along the sides of polygons and smoothes the appearance of diagonal lines in a scene.

HAL, OR HARDWARE ABSTRACTION LAYER Another name for the hardware driver software portion of Direct3D or any API that talks to the registers of a specific chip.

MIP-MAPPING MIP maps are multiple textures of varying resolutions that represent the texture when viewed from varying distances, and are swapped onto the texture as the viewpoint moves closer to the object.

POINT SAMPLING The simplest method of texture mapping, where a single pixel of a texture map is drawn as a single texel with no filtering.

SPECULAR HIGHLIGHTING An effect applied to a texture to make it appear to be lit.

TEXTURE MAPPING Applying a bitmap to a polygon to make it appear more realistic.

TEXEL A pixel from a texture map that has been applied to a polygon.

TRILINEAR MIP-MAPPING A more elaborate filtering technique whereby the four neighboring pixels from the current MIP map and the four neighboring pixels from the nearest MIP map are averaged. This can produce a smoother effect than bilinear filtering.

Z-BUFFERING A technique for managing which surfaces are visible along the distance axis (z-axis) by storing depth values before calculating hidden surfaces. It is more CPU- and memory-intensive than the less-accurate z-sort method.

This Is Not Your Father's PC

New Appendages Coming to a Rig Near You

For the last four or five years, changes in the PC have been somewhat evolutionary. The last really significant

change was the addition of the PCI bus. Other than that, it's been incremental improvements—faster processors, different memory formats, ATX form factor for motherboards, and so on. Even Windows 95 was an evolutionary improvement, although DirectX may eventually revolutionize the programming of PC games.

In the next year, though, several innovations promise to utterly alter the face of the PC—and the result will be pretty alien compared with what we have today.

TODAY'S BEIGE BOX

All computers on the market today are basically similar to one another. Inside they have a motherboard with some PCI slots and some ISA slots. There are also memory slots—72-pin SIMMs are still prevalent, though the shift to DIMMs is accelerating (DIMMs allow you to upgrade your memory by adding a single module at a time, rather than in pairs). All systems now have two built-in EIDE connectors for disk drives, a floppy disk drive connector, serial ports, and parallel ports. There are also keyboard connectors and, usually, a dedicated PS/2-style mouse connector (although

there may just be pins on the motherboard—in this case you have to supply the mini-DIN connector).

Disk drives, CD-ROM drives, and floppies are mounted in bays. Some of the more clever designs use trays that snap out easily, but attaching the actual ribbon cable is often a chore, even for an extremely dexterous person with very small hands. Although some systems come with built-in graphics and audio, for the most part expansion cards inserted in slots handle the graphics and audio chores.

As I've built more and more systems, I've become increasingly

comfortable with this paradigm. As paradigms go, though, it's very "high priest." In other words, you've gotta be well-versed in the appropriate religions...er...I mean...technical dogma to make it all work.

I've never been much for dogma, though. While it's fun knowing all this stuff, I've always believed that a PC should be at least as easy to run as a car—and maybe even as easy as your home entertainment center. (Those of you who will crack wise about setting the clock on VCRs haven't kept up VCRs can now set their own clocks.) As for me, I no longer get cheap thrills

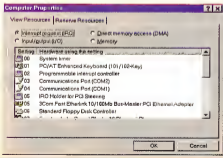

“ In the next year, several innovations promise to utterly alter the face of the PC. **”**

▶ Taking a Gender at the Ins and Outs

If you're about to install a new piece of hardware and want to see what resources are available—let's face it,

Plug-and-Play doesn't get it right all the time—you can get a listing by IRQ, DMA, and Base I/O address. Right-click on the My Computer icon, and select Properties; then go to the Device Manager tab dialog, and double-click on the Computer icon.

LOYD CASE

by slicing my fingers trying to insert another S&S@t interface card. I want a revolution, dammit!

THE PC IS DEAD. LONG LIVE THE PC.

The boys in Redmond (Microsoft), Intel, and a number of systems and peripherals vendors have gotten together to redefine the personal computer. The main idea is to make everything easier to set up and easier to use. They even plan to make unattended setup more feasible. A whole host of technologies is being brought to the table. What follows is a laundry list of some of the items. If you want to take a look yourself, download the preliminary PC-98 spec from Microsoft at

www.microsoft.com/indwpc98.htm

There won't be a single PC standard. There will be a basic PC-98 standard, which all the others have to begin with, but they'll diverge from there. There'll be a "consumer PC 98," an "entertainment PC 98," and a "workstation PC

98." The version we're most interested in is the entertainment PC 98.

LIGHT MY FIREWIRE

One of the most important features is high-speed connectivity. The PC-98 spec calls for IEEE 1394 as a primary high-speed interface. IEEE 1394 began life as Firewire, a serial link for high-speed peripherals (ironically, it was invented by Apple). Peripherals can be daisy-chained together, and Microsoft is calling for a minimum data rate of 600Mbits/sec, or roughly 75MB/sec. This is some serious bandwidth, folks; it's suitable for hard-drives, which are one of the connection options. In fact, embedded deep in the document are words like "FDD: drives should be connected via IEEE 1394." This will certainly make it much easier to connect high-speed peripherals.

IEEE 1394 is also good for anything that requires a big pipe for data. One of the other interesting features that will

be included is video capture. Yes, you'll be able to take your camcorder or VCR and capture video to your hard disk for editing. DVD drives will also likely be attached by IEEE 1394, as will printers and scanners.

UNIVERSAL ACCEPTANCE

The other main connectivity source will be the Universal Serial Bus (USB), which may prove more significant than Firewire from a day-to-day usage perspective. In the future, you'll connect your keyboard, mouse, multiple joysticks/controllers, modem, and other serial devices by USB. The cool thing is that USB is hot-swappable. "You plug the device in, the system auto-configures for it (no reboots, folks), and off you go. You may have to install a driver the first time you connect it, but that will just mean popping in a CD and walking away—the PC-98 spec talks often about installation without user intervention."

The ultimate 3D & video entertainment*

Matrox introduces its new line of graphics and video accelerators

Get ready for the ultimate in home PC entertainment. By combining the Matrox Rainbow Runner Studio with the new Matrox Mystique™ 220 graphics accelerator, you'll be set to explore the latest in 3D and video. With the mind-blowing speed of Mystique 220, you'll be ready to fly, blast, or tunnel your way through all your favorite 3D games, 2D Windows, and video applications. Then when you add the Rainbow Runner Studio card (sold separately) you can create and edit high quality home movies just like a pro. The \$500 of free software even lets you edit in Hollywood style special effects, titles, and sound. You can also play PC games on your big screen TV. Video conference over the Net. View full-screen hardware MPEG1 video, and much more!

As the winner of over 250 awards for our world renowned products, Matrox is the leader in developing state-of-the-art technology that is reliable and easy to use. Choose the leader in graphics and video. Choose Matrox.

Matrox performs for competition (14-16)

Matrox Mystique 220

- * Ideal for Windows 95 applications, 3D games, MPEG1 video, and much more!
- * Comes with 5 free software titles including Disney's Toy Story, Electronic Arts' Mono Racer GP, Kai's Power Gao and more!

Matrox Rainbow Runner Studio

- * Ideal for video editing, video conferencing, PC to TV output, PC-VCR video capture, and hardware MPEG video.
- * Includes 4 free software titles. \$500 value.

matrox
1-800-362-9340

a free **matrox board** check out
www.matrox.com/mgs/cgw

* Estimated street price. To use Rainbow Runner Studio you require a Matrox Mystique or Mystique 220 graphics accelerator. All performance tests conducted by Matrox Graphics Inc. on a Gateway 200 MHz MMX with 32 MB of SDRAM and 212K cache. Matrox Mystique 220, General Statistics 3D 3900 P/s, Creative 3D Blaster PCI, and ATI 3D Xpression - PCITV, were configured with 4MB of memory using driver releases 3.62, 4.00 00.0200, 4.00 0304, and 4.00 00 2352 respectively. WinBench 97 business tests conducted at 1024 x 768 @ 16 bit at 75 Hz using small fonts under Windows 95, 3D WinBench 97 tests conducted at default resolution 640 x 480 @ 16 bit at 75 Hz with DirectX™ 3d using small fonts under Windows 95. 3D WinBench settings were dictated by Quality Scale exposures for the respective products.

CIRCLE READER SERVICE #269

THE BIG SLEEP

How the computer handles power will be very different from today as well. The power switch in the future PC will not be a real power switch but, rather, a "sleep" switch. When you punch the power switch, it will go into a very low-power, quiescent mode. Press the button again, and you'll find yourself just where you left off. I can just imagine doing this in the middle of a QUAKE level: "Ohmigosh, a Vore! Hit the power switch!" Imagine the reaction when your spouse comes along and turns on the computer....

You'll be able to turn the computer completely off by selecting Shutdown from the start menu. Can you say "Macintosh"?

THE MORE THINGS CHANGE...

What about "legacy" devices? One key feature that will be missing are ISA cards. In fact, the PC-98 people would love to do away with ISA slots entirely.

Since most audio cards are ISA, the sound card and modem vendors had better move to PCI, USB, or IEEE 1394 pretty quickly—and it seems they will, what with audio migrating to PCI and modems going to USB. It's very likely that next year's PC will still have serial ports, parallel ports, and so on, but the move to faster, friendlier connectivity will be strongly encouraged.

The biggest change on the graphics front, without a doubt, will be the new Accelerated Graphics Port (AGP) architecture, which will move graphics off the PCI bus and onto the main memory bus itself. This migration will make room for other PCI devices (disk controllers, sound cards, and the like) and give graphics up to a 4X bandwidth increase, which will be vital for more complex 3D games. Other changes are less dramatic: All PCs will have TV out and 3D acceleration. In fact, one gem buried in the PC-98 spec is that MS

Internet Explorer 4.0 will use Direct3D—for VRML, but also for user-interface tweaks. So, 3D will be the mainstream.

PLUG IN AND PLAY

Finally, there's DeviceBay, an emerging standard for expanding your system. Instead of popping open a case, cutting your fingers, and trying to use screws made for inhumanly small hands, you'll just pull out the old device and insert the new one. This will work for all devices except graphics and your boot drive. Upgrading to the latest, fastest, biggest, whizzbang device will be a cinch.

DeviceBay makes use of IEEE 1394, which allows devices to be hot-swapped.

So it looks as if the PC for the millennium will be easy to configure and upgrade, and it will be very, very fast. It's the Nirvana that all computer gamers dream of. Now if we can only get DirectX to install that easily.... ☺

Plant Trees For America

This is the 125th Anniversary of Arbor Day, the tree planters' holiday. This year The National Arbor Day Foundation asks you to plant Trees for America, and provide for their care.

Trees Make a World of Difference. Thanks to trees we enjoy shadier streets, greener city parks, and friendlier neighborhoods. Trees also produce oxygen, absorb carbon dioxide, and help keep the atmosphere in balance.

This year, plant Trees for America. For your free brochure, write: Trees for America, The National Arbor Day Foundation, Nebraska City, NE 68410.

Mean Machine

Intergraph Delivers Much Performance Though Few Extras

by Dave Salvatore

Intergraph is not a name known to most gamers. But anyone who's ever shopped for a 3D workstation has undoubtedly heard of these guys. As the consumer PC space begins to concentrate more on 3D graphics, Intergraph has jumped into the fray with a variety of system offerings, and these boxes are poised to move.

Intergraph also has a build-to-order, direct-purchase Web site where you can build the rig you want, with all the bells and whistles, and find out the total price. The TD-25 is Intergraph's higher mid-range system, using Intel's 233MHz Pentium with MMX (P55C), and what it lacks in extras, it makes up for (somewhat) in performance.

Setting up the TD-25 is fairly straightforward, though none of the ports on the back of the box are labeled. The documentation, though somewhat brief, makes setup easy, and within about 10 minutes, the TD-25 is good to go. The innards are easily accessed sans tools after removing six "thumb screws," and the interior layout allows easy access to most system components. The Phoenix BIOS is pretty rudimentary, and doesn't allow for much in the way of low-level tweaks.

The unit we evaluated included a key-board with embedded speakers, which may be fine for corporate types who want to hear "ding" every time they do a no-on, but for gamers these speakers clearly are not up to the task. Intergraph was investigating speaker upgrade options at press time.

We did encounter several other rough edges along the way. For starters, the DOSSTART.BAT isn't properly configured to bring up real-mode drivers for the sound card and CD-ROM drive. Also, Intergraph doesn't include a copy of DirectX 3.0a (current version) on the hard-drive to re-install drivers should a misbehaving game hose your DirectX setup.

What's In the Box?

CPU: Intel P55C 233MHz
Motherboard: Micronics Thunderbolt ATX with Phoenix BIOS and 430TX chipset
Memory: 32MB SDRAM
Graphics: Intergraph Intense 3D-100 w/4MB
Monitor: 17" Intergraph 175089
Hard-Disk: 5.2MB EIDE
CD-ROM: Toshiba 5702 (16X)
Audio: Ensoniq AudioPCI
USB Ports: 2
Modem: None
Game Controllers: None

RUNNING THE NUMBERS

The TD-25 is the first system we've seen that ships with a graphics board based on Rendition's Vanta 1000 chip in Intergraph's own Intense 3D 100 with 4MB of EDO DRAM. Intergraph has done some deep tweaking on the Windows 2D drivers, and delivers solid numbers on this front. The other good news is that the TD-25 will run all Rendition-optimized titles.

For comparison, we stacked up TD-25 numbers against those recently posted by Pison Northwest's venerable five-star 200MHz Pison Mach V in Windows 95. TD-25's Graphics WinMark numbers are not far behind those of Mach V at both 800x600x24 and 1024x768x16. TD-25's CPU Mark scores are about 20 WinMarks ahead of Mach V, though this is due in large part to TD-25's faster 233MHz clock speed, so we'll call that one a draw. Looking at the storage sub-system, TD-25 is 100 WinMarks slower on the Disk WinMark than Mach V, though its CD-ROM performance is a hair faster. But with the slightly faster CD-ROM performance comes higher CPU usage: 78 percent, compared with Mach V's 46 percent. In 3D WinBench, TD-25 is clearly bested by Mach V, scoring 51 WinMarks to Mach V's 132. It warrants mention that

DirectX 5, which should be shipping as you read this, can use DMA. This will boost 3D WinBench scores for all Rendition-based boards.

Win 95 titles generally run well, though when running the Direct3D version of MDK (with the patch), certain scenes have incorrect colors. But USNF '97, MicroRacer, CP, and Paguros' FORMULA run fine.

In DOS, TD-25 pretty much paces Mach V in

Quake's Time Demo tests both at 320x200 and at 640x480. Running at mode 0 (s-mode, 320x200) the TD-25 has choppy audio, but Intense 3D 100 supports VESA display modes, and using vid-mode II (320x200) lets Quake use Vanta's much faster RISC core and solves the audio problem. Also, TD-25 runs Quake, the first 3D chip-optimized version of Quake, with a similar glitch at 320x200, but at 640x480 is very playable and looks great. In CBench's SVGA-graphics test, TD-25 and Mach V are even.

TD-25 turns in positive performance numbers, despite a few rough edges. These numbers are all the more impressive considering that Intergraph costs under \$3,000. If you already have game controllers, a good set of speakers, and a speedy modem, this rig will serve you well. If not, be prepared to source out the extras elsewhere. ☺

APPEAL: Gamers looking to upgrade their current rig who don't need new peripherals.

PROS: Solid performer across the board; painless setup.

CONS: Lack of extras; some driver trouble with Direct3D games.

Price: \$2,899

with 17" monitor

Vendor: Intergraph

Seein' the Big Show

by Dave Salvatore

When it comes to displays, bigger is better. As first-person games have become all the rage for shooters, flight sims, and driving titles, the bigger picture can go a long way toward total immersion. And while 17-inch monitors have become affordable, larger displays (over 20 inches) have remained expensive. Until now: Princeton Graphics has unveiled its 27-inch Arcadia Home Monitor, the AR27, both with and without speakers, and both units are less than \$4,000.

The first thing you notice about the Arcadia is that it's huge, and heavy. You'll need a pretty big space, and you'll definitely want help getting this behemoth set up unless you're lord of berries. Once you get the monitor in position, the remainder of setup is a breeze. Arcadia's maximum resolution is 800x600, with a top vertical refresh of 60Hz. This isn't that much of a limitation, remember, it's a 27-inch monitor.

Arcadia's versatile audio/video ins and outs include VGA, three video (two composite, one S-video) inputs, and two stereo audio inputs. There's also an audio out that acts as a pass-through so you can route your audio signal to your stereo amplifier.

At 800x600, the monitor's image quality is solid across the board. Using a testing tool developed by sister publication *Computer Shopper*, we looked at focus, geometry, convergence, color tracking, and flicker. On all fronts, Arcadia delivers sharp image quality. On the flicker test, there is no noticeable flicker.

Game video looks great, and having a screen this big makes playing games of any genre more enjoyable. Turning off all the room lights and running QUAK through a 27-inch monitor made for an eerie experience indeed. VCR video also looked fine running through one of Arcadia's composite inputs.

The only mild disappointment was the embedded speakers' sound quality. Bass response was surprisingly good, considering the absence of an external woofer, but the mids and highs were muddied. If you've got a good pair of speakers, opt for the speakerless version, and you'll be fine.

If you're looking to build your own living room PC, or just want a colossal screen for all your gaming adventures, Arcadia's AR27 is a great choice. **C**

APPEAL: Gamers looking for a trickin' huge monitor.

PROS: Huge viewable screen, great image quality; multiple AV inputs; inexpensive.

CONS: Very bulky; audio quality is so-so.

Price: \$999, \$799 without speakers

Big Sound, Small Price

by Loyd Case

The System 25 is Yamaha's 3-speaker entry into the budget category, consisting of a powered bass unit and two satellites. The list price is a mere \$129, but it's likely that the street price will be under \$100.

Here the System 25 out of the box, and you'll be amazed at just how tiny the satellites are. Measuring a scant 3.5x2.5 inches (about 4.5 inches deep), they can either be placed on a desk or mounted on a monitor. Miniature stands attached to each satellite swing out so that you can easily adjust speaker angle.

Setup is straightforward. The satellites plug into the bass unit—and the connections are different, so you can't make a mistake. There's a power button and volume control on one of the satellites. The bass unit has its own bass boost control. You plug your sound card output into one of the two input sockets on the back of the bass

module. The power supply is built into the bass unit—no power brick, thank the gods.

I tested these speakers with a wide array of music and had a very odd reaction. High-end response is quite good for such tiny units; bass response is surprisingly robust; and voices sound lively and realistic. But the overall feeling left me wanting, and it took a while to realize what was happening. Stereo imaging is very precise—note that I didn't say accurate—but the entire stereo image is between the two speakers. When you set them on either side of a monitor (a typical setup for home or office computing) the imaging is very two-dimensional. There's no feeling of depth at all, as if the entire band or orchestra has been squeezed down into a two-foot wide space. So these aren't the greatest speakers for music.

Games are another story. I ran QUAK, Jank's new G88, RED ALERT, and Wing

COMMANDER III through them, and for gaming they sound quite good. The compressed stereo imaging seems nearly ideal for game playing. Voice and sound effects sound great, and game music sounds just fine, although you won't shake any ravers with the System 25.

For about a hundred bucks, these little guys deserve some serious consideration. Check 'em out. **C**

APPEAL: Gamers on a budget looking for good sound.

PROS: Easy setup; good sound quality; compact size; low price.

CONS: Compressed imaging for music; lack of deep bass; limited power.

Price: \$129 (MSRP)

Micron™ Millennia

Here comes the annoying neighbor kid going 'whatcha doin'? 'wanna play? She's just one more reason to stay in and play with your new Micron Millennia PC.

Designed to run even the most graphic-intensive games and Internet entertainment, you'll get awesome 2D and 3D graphics cards, the screaming speed of Intel's processors, and more.

We pack the Millennia XXX with the Pentium II processor featuring MMX technology, and the MME with a Pentium processor with MMX technology. Add our Fusion3D option, and you'll get DVD software, Monster 3D graphics card, MME 64 PCI sound card, a two speaker satellite with a subwoofer stereo system — and five of the most intense multimedia games available today.

We'll include a software pack with every Millennia. You choose one of four bundles.

Don't stress. You always have Micron's award-winning customer support — 24 hours a day, seven days a week — and one of the best warranties in the industry. Call Micron today for everything you need ... including more ways to ditch Veronica.

Call for information on our other Millennia configurations.

Configured For Your Life.

Sounds Like a Deal

by Lloyd Case

I've always been a little leery of bargain-basement sound cards. I've had more problems with cheap audio cards than with just about any other peripheral. Yet, I'm always on the lookout for low-cost audio, hoping to find a gem in the rough. I'm happy to report that I think I've found one.

Terratec is a German manufacturer of sound cards; its previous efforts have mostly focused on high-end audio for audiophiles and musicians. The Terratec Base I is the company's first foray into the true consumer-audio space. Installation is a snap: Just pop the card into a 200MHz Pentium MMX system, and on boot-up, Windows 95 auto-detects the card and installs the Windows drivers without a murmur of complaint. You need to run a separate install to set up DOS drivers (which allow Base I to emulate a Soundblaster Pro).

This \$60 card doesn't come with a built-in wavetable—you only get FM synthesis—but the digital audio sounds very clean. The only jumper on the card activates or deactivates the onboard amplifier, and with the amp disabled, the card is very quiet (though powered speakers). Windows wave audio sounds very good and MIDI playback is typical FM synthesis—let's just say it works as expected. There's also a 3D sound option called VSPACE that spreads out the stereo field much like Spatializer or SRS audio, although VSPACE seems to be reverb-heavy.

As for DOS performance, QUAK—normally very finicky about sound cards—sounds great, as does WING COMMANDER III. One minor negative is that the MIDI port sadly grabs IRQ 9 and doesn't share it.

In addition to the base card, there's a connector for a wavetable daughtercard.

Because of the small size of the Base I, a standard daughtercard hangs out in the air, but Terratec will soon ship a compact version of Yamaha's DB510C MIDI wavetable card. There's also an optional audio tuner card, which is available separately.

Overall, the Base I is a solid, inexpensive card that sounds good, seems very compatible, and installs like a dream. For gamers on a budget, this just might be the cat's pajamas.

APPEAL: Gamers on a tight budget looking for good sound quality.

PROS: Inexpensive; easy installation for both DOS and Windows 95; great sounding digital audio.

CONS: Cheesy FM synthesis; odd mounting for wavetable cards.

Price: \$59.95 MSRP

Beyond the Joystick

by Tara Callishain

With the development of new 3D-graphics technology, it's not surprising that game controllers now go beyond the joystick. That's what the Logitech CyberMan 2 is all about—taking you into 3D games with full 3D control. If you can handle the steep learning curve, you'll be rewarded with a much more immersive experience in games like DUNE NUKEM 3D and DESCENT.

The CyberMan 2 is fairly large, with eight buttons on the left and a knob that looks like it should rotate (but doesn't) on the right. It's considerably heavy, and even in the midst of frenzied action, it stays put.

CyberMan 2 installs in a snap and comes preloaded with several game-specific configurations, including QUAK and MDK. It's easy to add your own configs. Creating a playable controller for the X-WINGS: THE FIGHTER demo takes less

than five minutes. Don't get out all your games, though—CyberMan 2 runs only in Windows 95 or a Win-95 DOS box.

The biggest drawback of the CyberMan 2 is its counter-intuitiveness. The direction controller looks as if it should be spun, but instead you have to tilt it, nudge it, pull it up, or push it down. In a game like DUNE NUKEM, this leads to a lot of initial frustration, as you find yourself looking up instead of moving forward and jumping instead of looking up.

If you can stick with it for about two hours, it pays off. Motion in DUNE becomes incredibly fluid. Flying around with the jet-pack becomes almost a game in itself as you smoothly rise, sink, and fly around. Plus, CyberMan 2 is ergonomically friendly; so you don't end a game with numb fingers or a case of "joystick clench."

Unfortunately, the controller is a little too sensitive—even when you're used to

it. In DUNE this isn't a big deal, but in CyberMan's bundled game, DESCENT II: DESTINATION QUANTUM, accidentally looking down flips you over. CyberMan 2 already has sensitivity settings, but could be improved with desensitizing settings.

If 3D shooters like QUAK and DUNE are your cup of tea, CyberMan 2 is a must-have. If not, the frustration of learning the particular motion of the controller might outweigh your gaming payoff.

APPEAL: Ideal for 3D games and shoot-'em-ups.

PROS: Fluid motion; easily programmed.

CONS: Desensitizing; at times counter-intuitive; steep learning curve.

A Different Way

by Loyd Case

3Dfx Voodoo 3D-accelerator chipset represents a fast, traditional 3D rendering pipeline. But Videlogic/NEC's PowerVR PC2X takes a different approach: it uses a "chunk" rendering scheme that breaks the scene up into small pieces, rendering it a piece at a time. A benefit to this approach is PowerVR's ability to do z-buffering "on the fly," rather than allocating memory for a z-buffer. All 3D display data is then sent via the PCI bus to the 2D board's frame buffer. In a look at Videlogic's Apocalypse 3DX, based on this second-generation PowerVR chip, the results of this novel approach are mixed.

PowerVR doesn't support the fog effects used by 3D WinBench, has only limited transparency ability, and no specular highlighting. 3D WinBench 97 reports that the 3DX only supports bilinear filtering, filtered MIP mapping, perspective-corrected textures, and hardware dithering. Some minor

rendering errors occur in the last 3D WinBench scene. The Apocalypse 3DX posts a 69.2 3D WinBench score on a 200MHz P55C system with an ET-6000-based STB Lightspeed I28. Because PowerVR uses the 2D board's frame buffer, a slower 2D board could negatively influence PowerVR's performance. Direct3D apps refuse to run with an early version of the Lightspeed I28 drivers; updating the primary driver enables the PowerVR to run, so make sure you have a working DirectDraw capable card.

Games directly ported to the 3DX look good and run well. ULTIMATE RIBBON looks very pretty, but some of the ground textures in MIRC (WARRIOR II) look weak. MDK3's built-in performance metric reports a score of 300 in the Direct3D, whereas the DirectDraw version generates a score of 90. Occasional system lockups occur with the PowerVR card—something we didn't see with either Rendition or

3DX cards. The Direct3D demo of TERRACIDE runs without any problems, however.

The Apocalypse 3DX generates a decent 3D WinBench score—not as fast as 3DXs, but faster than most chips, and some of its bundled titles are very sharp. Given recent price drops in 3DX cards and the imminent shipment of the RIVA I28, ATI Rage Pro, and Rendition V200 boards, it remains to be seen how well PowerVR will keep up. ☺

APPEAL: 3D Gamers on a budget.

PROS: No pass-through cable needed from 2D card; direct ports run great.

CONS: So-so Direct3D performance; limited rendering feature set; performance may be hindered by 2D board.

Price: \$149 (approximate street), \$99 (upgrade from PowerVR)

Flight Done Right

by Denny Atkins

Attention, Thrustmaster and CH Products: This is your wake-up call. Saitek's X36 PC Flight Controller is the first joystick and throttle combination that really gives the old standards competition. And at a cost of only \$150, it also gives them a run for the money.

The X36 system consists of the X36F joystick and the X35T throttle/rudder controller. They are available separately as well, but the throttle only functions with the X36F joystick. The joystick has a trigger, four fire buttons, two eight-way hat switches, and X- and Y-axes turn controls. The throttle sports an eight-way hat switch, two three-position switches, a fire button, and two rotary dials. A small stick can function as a radar control (it emulates a mouse) and an innovative rocker control emulates rudder pedals.

A three-position switch lets you assign three functions to each button and hat,

and a pinky shift switch on the joystick allows a second function for each stick button. You'd be hard-pressed to find a sim with more functions than you can program here. The stick can also emulate a CH F-35 Combat Stick.

The X36's Windows programming utility is the friendliest I've seen yet (that's relative, as joystick programming software has never been better than mediocre). You're given a list of functions, such as Flaps, Jamming, and Radar Zoom, and you input the key sequences for the sim you're programming. You then assign these functions (instead of the actual key-presses) to various input switches on the stick and throttle. It's a bit of a convoluted process, but it makes fine-tuning your program files much easier when you're looking back—it's far more intuitive to alter a function later when you see "Radar Mode" rather than "Alt-R."

The controls themselves are very comfortable. The throttle is probably the nicest design I've seen, its only downside is that the promised detentes weren't noticeable on the early production unit. The stick has a very smooth feel, neither too loose nor too stiff. My only gripe is the goofy-looking hand guard—you're flying planes here, not swashbuckling. ☺

APPEAL: Flight sim fans looking for a high quality, flexible HOTAS system that doesn't cost a bundle.

PROS: Good programming software; comfortable; individual functions easily disabled.

CONS: Extra cable needed to use mouse emulation.

Price: X36 Flight Control System (pair) \$150, X36F alone \$99, X35T alone \$69 (requires X36F)
System Requirements: Windows 3.1 or 95; gameport that supports two joystick channels.

Such a Deal

by Dave Salvatore

In the world of audio, you get what you pay for. Or do you? Cambridge Soundworks has revisited that question, and has come up with a speaker system for \$300 that should make some \$250 systems nervous. And while this system lacks the deep, low-end punch and louder volume of its pricier sibling, the Microworks, it nonetheless delivers impressive PC audio, and is easy on the wallet.

PC Works comes in the form of two small satellites and a woofer, but these satellites are even more compact than those found on the Microworks.

Setup is painless, and takes all of five minutes. One grumbling point: Though there's a single power supply, it's a "wall-wart," which eats most of an electric outlet, rather than the preferred "soup on a rope" approach. There are two volume adjusters, one to adjust bass volume on the woofer unit, and another (an in-line volume fader) to break the overall volume level.

Running audio CDs—ranging from Beethoven to Bruce Hornsby—through the PC Works, the overall sound quality is very clean, with well-defined highs, clear mids, and solid bass. With the sound card mixer's faders at about 75 percent, the PC Works distorts at about 70 percent maximum volume. But backing the control off a bit produces seasonably loud, clean imaging. The only complaint is that the PC Works' stereo field feels "focused," and is very much contained within the physical space between the two satellite units.

In a comparison with the Microworks, the PC Works' high-end has comparable clarity and definition, though the PC Works' low-end and maximum volume are clearly not as strong.

Gaming audio in shooters and flight sims is solid, with more-than-adequate bass on explosions, and a clear high-end. In gaming audio uses, the PC Works'

somewhat constricted stereo imaging is much less perceptible.

Cambridge has created what may be the shape of things to come: A set of speakers for your PC that will more than fill the bill, and not erump your budget to pay for it. And while I still would give the nod to Cambridge's Microworks, the PC Works warrants serious consideration if you're budget-challenged but still want big sound. **C**

APPEAL: Gamers who desire champagne-quality sound on a Budweiser budget.

PROS: Great sound for the money.

CONS: Lacks clean low-end at higher volumes; wall-wart power supply.

Price: \$300
Vendor: Cambridge Soundworks

The X Factor

by Greg Fortune

There seems to be a trend developing in the marketing of certain types of computer hardware. Rather than reporting what a device is capable of on a consistent basis, many companies have begun advertising the performance of a part based on the absolute maximum performance of the equipment, the kind of performance that you will rarely see during real-world use. Particularly guilty of this have been CD-ROM manufacturers, who would like you to believe that their drive will give you 16x, 18x, or higher performance. In actuality, these drives provide far less performance, peaking at that level only occasionally. So, guess what we found when we tested Panasonic's new 24x drive...

Installation of this drive was painless under Windows 95, and the drive lives up to its claim of working while mounted on its side—a nice touch.

Our WinBench 97 CD-ROM tests were run from a Pentium 166 machine with an Intel Bus-Mastering PCI EIDE controller. We expected to see about 16x performance overall, which is roughly what the drive delivered. The WinBench 97 CD-ROM tests came in at an average of 1,100 on two different machines, with the highlights being sequential throughput scores that averaged in the 2,500s and peaked at 3,500KB/sec transferred (when reading from the outer tracks only).

Every give has some take, and this drive took it in the shorts performing random reads. The average throughput for randomly accessed reads averaged a scant 86KB/sec, not exactly stellar performance. CPU utilization was generally around 40 percent during the random reads, but remember those blazing sequential transfer rates? During high-speed sequential transfers the CPU utilization shot up to a

whopping 65 percent with an impressive access time consistently just about 100 milliseconds.

Panasonic's 24x CD-ROM drive does have very good performance, as long as the data is being read in large blocks from the outer tracks on the CD. However, gaming requires more flexibility than that. Buy a drive designed to give you all-around high performance, not one tweaked so that "24x" could be written on the box. **C**

APPEAL: Gamers who prefer fast installs to smooth game-play.

PROS: Blazing sequential transfer speeds.

CONS: Random access transfer speeds tank; chunky game-play; high CPU utilization.

The demands placed upon a super hero's shoulders are tremendous. He needs plenty of space to fight evil in every corner of the galaxy. He needs thunderous sound to keep in tune with his surroundings. He needs access to the Internet and TV to keep up to date on the universe. He needs a physical conditioning machine to keep him in speed-of-light, stronger-than-steel shape. Otherwise, he's of no use to us.

How to get a friend in the business™

This is his fitness machine.

Don't let your super heroes get lazy and lethargic — tights and a mask can only do so much. Give them the equipment to exercise their powers.

Gateway's Destination™ Big Screen PC/TV is the ultimate choice for any super hero worth his or her weight. Open your games to a whole new galaxy with the monstrous 31-inch monitor. The thumping sounds of Boston Acoustics® MicroMedia™ or harman/kardon® high-fidelity speaker systems will not only tug on your hero's cape, but yank it off if not tied properly.

Soup up your multimedia with Intel Pentium® processors with MMX™ technology, or the sonic 32-bit processing and MMX technology of Pentium® II processors. Add a DVD-ROM drive with its vast storage capacity of up to 133 minutes and the might to play kryptonite-shattering audio and video.

Join forces with your fellow caped crusaders. The wireless keyboard and Field Mouse® remote turn your living room into a hall of justice. Since they work on radio frequency, point them in any direction, even through your arch-nemesis Rover, as he plots to block your view. *Ha-ha, Rover. Foiled again by the 31-inch screen and RF remote and keyboard!* And all the capabilities of the Internet and TV are only a click away.

That's some serious gaming. Call today or fly to www.gateway.com and feel the power of the Destination Big Screen PC/TV — the super hero's complete fitness machine.

"You've got a friend in the business."™

READER QUOTES

Since its release, *Duke* has been addressed as an RPG. Though a good game, it is not worthy of the RPG title. *Duke* is basically a third-person shooter (as is *Crusader: No Remorse*) with a developed character. There is more to an RPG than character. Back when RPGs were genuine, they had a very complex world, if not worlds, to travel through. They had the famous battle sequence that relied on skill and thought, rather than reflexes. Several people were in your party at most times. Most of all, there was a story. These elements that make up the game go hand in hand, and should not be separated.

In your June issue, you addressed the new *Quake* killers. I think they are

a joke. They are called "action" games, but with developed characters and a better story. Action games don't need a story. All you do is progress through levels and kill, kill, kill, anyway.

I was very impressed, though, by your article in the August issue about ION Storm's *Anachronox*. The fact that

Tom Hall made his team play *Duke* or *Tresor* before starting work on [*Anachronox*] would have been exactly how I would have done it. I hope that game companies read this and follow in the footsteps of Square, makers of the best true RPGs ever.

—Aaron P. Low

COASTER OF THE MONTH

p. 228

Review Quote of the Month

"Who would have guessed that 20 years of goody-two-shoes gaming could be countered by a single game?"

—Chris Lombardi,
reviewing *DUNGEON KEEPER*

HOW DO WE RATE?

We only review finished products, not pre-release versions. The ratings are as follows:

Outstanding:

The rare game that gets it all right. The graphics, sound, and gameplay come

together to form a Transcendent Gaming Experience. Our strongest buying recommendation.

Very Good:

A high-quality game that succeeds in many areas. It may have minor problems, but is still worth your money, especially if you're interested in the subject matter or genre.

Average:

A mixed bag. It can be a game that reaches for the stars, but falls short in several ways. It can also be a game that does what it does well, but lacks flair or originality.

Weak:

A game with serious problems. Usually buggy, seriously lacking in play value, or just a poorly conceived game design—you should think long and hard before buying it.

Abysmal:

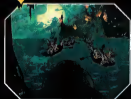

The rare game that gets it all wrong. This is reserved for those products so buggy, ill-conceived, or valueless that you wonder why they were ever released in the first place.

Introducing the only
pirate adventure
that asks the question:
What's sharper, your sword
or your wit?

THE CURSE OF

MONKEY ISLAND

Presenting the long-awaited third installment in LucasArts' classic adventure series, *Monkey Island*. With features like 30-plus hours of gameplay, 8,000 lines of hilarious dialogue, oodles of challenging puzzles, high-resolution graphics, film-quality animation and a few surprise celebrity voices. Not to mention vegetarian cannibals and a guy named Snugglecakes. So get ready to embark on a rollicking, swashbuckling graphic adventure where the seagulls have better aim than the pirates, and the sharpest weapon is your wit. **For Windows 95 CD-ROM**

No Appeal

Three Games in the D.A.: PURSUIT OF JUSTICE Series Is Too Much Law & Order for Anyone

by Charles Ardai

At a recent high-school reunion, it seemed to me that everyone I talked to had become a lawyer. No supermodels, no computer-game designers, no presidents of the United States. Enough attorneys, though, to staff a president's cabinet, his supreme court, and his personal legal-defense fund.

This other bodies really well or really badly for a game series like Legacy Software's D.A.: PURSUIT OF JUSTICE. D.A. casts you as an up-and-coming prosecutor in the office of Los Angeles District Attorney Frank Jarrett. To take over Jarrett's job, you've got to prove yourself by getting convictions in three increasingly difficult cases. The gimmick here, as in Sierra's long-running POLICE QUEST series, is that the gameplay is procedurally realistic. No Perry Mason theatricality; no quaint, Matlock-like chatting of the jury—just textbook law of the sort you'd find in a law school classroom.

Judging by the apparent appeal of law school to my fellow alumni, such an approach might be a popular one. In practice, though, I wonder whom this game will appeal to. Not everyone who goes to law school wants to practice law, but I suspect that everyone who wants to practice law does go to law school. For a lawyer or a law student, playing D.A. would be as much of a business holiday as playing a POLICE QUEST game would be for a cop. And while I can imagine a casual John Grisham reader getting excited if the game featured conspiratorial legal shoddiness, how excited will he be when he discovers that his first case focuses on a drunk driver arrested for plowing into a bus stop bench?

IN THE 2ND DEGREE

Nearly two years ago, Broderbund released a very good (though not very suc-

cessful) game called IN THE 1ST DEGREE. Produced at the height of the O.J. Simpson trial, that game focused on a high-profile interracial murder case, and leveraged the legal proceedings with lots of social satire. There is no satire here, and instead of one somewhat lurid case you have several cases that are far more mundane. In almost all other respects, D.A. could be a sequel to IN THE 1ST DEGREE.

Both games play out entirely in full-screen video, featuring strong production values and good actors in the roles of defendants, witnesses, judge, juror, and so forth. Both games ask you to compile evidence and analyses and then use them at trial. Both feature visits to the scene of the crime and interrogations of witnesses in the pretrial phase, followed by examination and cross-examination in front of the judge, all over the course of several timed game "days."

After preparing your case (see the sidebar), you go to trial. First you call witnesses and select legally appropriate questions from multiple choice sets that include inappropriate questions; next you select relevant precedents to cite in response to objections raised by the defense attorney; then, when the defense asks inappropriate questions, you get to object; finally you get to cross-examine the defense witnesses. The computer manufactures your opening and closing arguments automatically, based on what you've done up to that point.

If you have too little evidence, the judge dismisses the case; if not, you either win or lose. Either way you get a rating on your performance. You can then replay the case to

LAWYERS, GUNS, NO MONEY

Broderbund's In the 1st Degree (top) and Legacy's D.A. (bottom) do look and play similarly.

improve your rating or go on to the next case. You don't have to wait until you've won one case before going on to the next. There is some bad news, though: You have to buy each case separately.

LEGAL EXPENSES

Imagine if each level of DOOM were a separate shrink-wrapped title, or if you had to purchase each subquest in a standard adventure game like NOIS or CALLAHAN'S CROSS-TIME SALOON.

STOP THE EXCITEMENT Maybe the reason that your boss, Frank Jarrett, wants to retire is that 80 percent of the cases he's seen in 20 years are drunk driving cases—just like your first, THE SUNSET BOULEVARD DEUCE.

Price: \$29.99 each
Minimum System Requirements: P75 (P133 recommended), 8MB RAM (16MB recommended), 15MB hard-disk space, Windows 85, SVGA graphics, 4x CD-ROM, mouse, supports Windows-compatible sound card
Multiplayer Support: None

Designer: Craig Brannon, Christine Taylor
Publisher: Legacy Software
Los Angeles, CA (800) 532-7692
www.legacysoft.com
Reader Service #: 327

separately. That's what this is like. None of the cases here is good enough to stand on its own, to the extent that the game is appealing, it's largely because of the development of your career over the course of several cases. The first, *THE SUNSET BOULEVARD DEUCE*, is the drunk driving case, and it's almost laughably introductory. The second, *THE COSBY DIAMOND JEWELRY THEFT*, raises the stakes, but only a little. A theft-inclined debutante steals a car and the diamond necklace it contains. The last, *THE RAT TATTOO MURDER*, finally wakes you up with a bit of homicide, but even this case isn't great courtroom drama.

The full game (the series) comes on eight CDs, and with tax it will cost you about a hundred dollars. How could it possibly be worth that much? Of course, you could skip cases 1 and 2 and jump

right into the murder. But as long as you're doing that, why not skip all of them? Instead, pick up the much superior *IN THE 1ST DEGREE* at discount. Then, if you're really serious, save the rest of your money for the tuition downpayment to Georgetown. **C**

APPEAL: Anyone who thinks *Law & Order* is too exciting.

PROS: Nice production values and FMV spice up the daily legal grind.

CONS: Too much realism and too little control

over gameplay; having to buy each case as a separate game makes the total cost as painful as hiring an actual lawyer.

Preparing a Brief

DA. differs from other courtroom games by giving you better tools for organizing your case before the trial, but it allows you much less freedom to actually do things. The tools include a terrific interface for ordering a variety of tests on evidence (such as fingerprint, handwriting, or chemical analysis) and for constructing a legal case, by selecting specific pieces of data as being relevant toward supporting the assertions you'll need to make in court. In the drunk driving case, for instance, you have to choose separate pieces of evidence to support your assertions that it was the defendant who was driving, that he was driving a motor vehicle, that he was drunk, and so on.

However, when you visit the scene of the crime, it's just a still photo of the location—you don't get to interact with the scenery in any way. In *1st Degree*, you conducted interrogations yourself, selecting which questions to ask a witness. Here, the interrogations have already been conducted and videotaped by the police, and all you get to decide is which videotapes to watch.

And, in practice, you have to watch all of them. Similarly, in the police evidence room, you basically

have to pick up all available pieces of evidence and scan them into your "Case Constructor." Because you have to click on not some, but all, the videotapes and not some, but all, the evidence, D.A. often feels less like a game than a mechanical exercise. The ticking clock imposes some urgency—days slip away unbelievably quickly, and you get only four before you have to go to trial—but otherwise the game feels automatic. It's also arbitrary: Why the maximum of 20 facts in the Case Constructor? In what real-world case would a prosecutor have to choose between two equally important facts because he wasn't allowed to go to court with 21? Perry Mason must be spinning in his grave.

VIRTUAL PARALEGAL The Case Constructor is your road to judicial success—provided you use only 2D pieces of evidence.

MATURE

Death and the Maiden

Don't Call This Wickedly Funny and Brutally Intense Game a CRUSADER Clone

by Robert Coffey

Meat Puppet's isometric shooting action and its female protagonist might cause some to dismiss it as an unoriginal CRUSADER knockoff (CRUSADER: NO Y CHROMOSOME), but such an assumption would be unfair. MEAT

PUPPET is different, distinguishing itself with a dark sense of humor, brutal, machine enemies, and a hectic style of gameplay all its own. Playmates Interactive has itself a killer title...in more ways than one.

DEATH OF THE PARTY

After attending a party, our heroine, Lotos Abstraction, wakes up with no memory. A mysterious figure known as the Martinet has erased her mind and implanted several gel sacs filled with chemicals under her skin. As Lotos, you must follow the orders of the Martinet and assassinate the leaders of six corporations, lest he detonate the gel sacs, resulting in a rather messy total body meltdown. Helping you is Durname, a digital assistant and fellow hostage. Succeed and you can confront your oppressor. Fail, and...well, you'd better get a mop.

Wielding a veritable Swiss Army knife of a gun that is capable of functioning as a flamethrower, machine gun, and rocket launcher—among other things—Lotos wreaks havoc across a beautifully blighted landscape. Three different resolution settings all deliver stunningly detailed graphics, but the highest setting is something really special, rendering a

gorgeous gameworld. The rich detail is evident in slime-driek sewer walls you can practically feel and cavernous chambers where highly gilded floors mirror the towering walls. The fire effects are tremendously cool.

ABSTRACT ART

The look of MEAT PUPPET sets it apart from CRUSADER—or any other game, for that matter. It is a much more vertical game than CRUSADER, with rooms that soar and provide different planes for action.

Platform gaming conventions play into several areas emphasizing jumping, particularly in a series of rooms that feature trampolines.

A slick, over-the-top sense of humor colors the physical gameworld but is most evident in the inventive army of adversaries facing Lotos. Evil nannies called Muckdowns puff on cigarettes and mutter "Where's a man when you

NICE PLACE TO VISIT, BUT... The world of Meat Puppet is chock-full of menace, but the SVGA graphics are easy on the eyes. Note the level of detail in the painting near Lotos.

need one!" before herding their bone-saw and scalpel-wielding toddler charges after you. Bogglelike Whipmasters, cannibalistic sewer abominations, and whimpering giant brains round out the 30-odd enemies. Unfortunately, the creative well runs dry a little later in the game when you face enemies that are just well-armed humans. All the enemies boast a daunting AI; they run away when over-

MEAT PUPPET TIPS

You've got to move quickly if you want to keep the Martinet from liquefying your innards. These tips might keep you alive long enough to free yourself and exact revenge on your puppet master.

Kill in numbers. Let abominations chase you until you've got a gang behind you and then torch 'em. Scare toddlers back to the Muckdowns then fight up the Muckdowns with a couple of rockets. They'll ignore the gathered toddlers as they run around screaming.

Use the environment as a weapon. Stand near fire to lure not-too-bright abominations to you and a fiery death. Lions of Industry will gladly walk into fire spouts if you play your cards right. Stairing near meat grinders will result in buckets of toddler-gore as the killer kiddies fall into the blades trying to reach you.

Price: \$49.99

Minimum System

Requirements: Pentium 100 or better, Windows 95, 16MB RAM, 85MB hard-drive space, 2x CD-ROM drive, Direct Draw-compatible SVGA-graphics video card (2MB video card recommended), mouse, Direct Sound-compatible sound card

Reader Service #: 329

whimmed and coordinate withering group attacks. A host of environmental hazards, including wicked whips, fire jets, and ridiculously gigantic guns add to the challenge.

KILLER MOVES

Keyboard commands or a combination of mouse and keyboard can be configured to maneuver Lotos. But since the mouse is used for shooting as both, mouse mode is the only practical option, since the need to hold down multiple keys while whipping the mouse around will challenge any gamer lacking a prehensile tongue. While Lotos can front- and backflip, as well as roll to either side, she has significantly fewer movement options than the *CRUISADER* hero. Since Lotos finishes rolls by facing a slightly different direction and standing upright again, rolling across rooms and using cover isn't an option. Flinky controls also make lining up jumps frequently frustrating.

Shooting is simple: The mouse's targeting reticle turns red over any destructible object. Click the mouse and fire. The main drawback here is when enemies get obscured by a column, yet are still in Lotos' line of fire. The reticle won't target them no matter what, apparently "seeing" only the column, which isn't destructible. In these cases, enemies can shoot away without fear of retaliation.

BEAT THE CLOCK

And shoot they will, for the action in *MEAT PUPPET* is nonstop. Lotos is under constant assault as she leaps and sprints her way to switches, ammo, and powerups. Armor provides some protec-

tion, but at a price—recharging it requires electrocuting Lotos and taking some damage. With the Martinet threatening to kill her if she doesn't assassinate quickly, Lotos is in a literal race against time. While this adds a definite sense of urgency to the game, it also proves to be its biggest drawback.

Gamers intent on blowing away everything and getting every powerup will likely run out of time and die. You'll have to leave a bit of creatures alive, but does anyone really play this sort of game without intending to indulge in a bloodbath? This time constraint is compounded by the sprawl of the gameworld. The embassies are huge, and frequently confusing, and backtracking is often required. Included maps will speed your journey, but shortchange playing time. Every room presents unique challenges, but you'll find yourself skipping the unnecessary ones while racing dual clocks for multiple assignments. An option to shut off the clock is definitely in order.

MEAT PUPPET's other shortcomings are niggling things, and don't detract much from the absorbingly violent gameplay. Death animations come in just two varieties, doubtlessly due to Lotos' limited arsenal. Only specific objects can be destroyed, resulting in rooms that remain relatively pristine despite a barrage of bombing. Unconscious enemies are inexplicably invulnerable to attack, even with mini-rock-

SHOCKING BEHAVIOR Recharging Lotos' armor is a simple matter of finding a blasted fuse box and indulging in a little self-electrocution.

TERRIBLE TANDEM Carry out all your assassinations and you'll get to square off against the Martinet and his little buddy. With luck you won't end up another bloody splash on the wall.

ets, until they get up again. As is the case with *CRUISADER*, there is no multiplayer option.

Even with the time limit and funky controls, *MEAT PUPPET* has plenty of mayhem to offer action fans. The colorful assortment of enemies, obstacles, and puzzles keeps gameplay fresh and fun. This is no *CRUISADER* clone; it's a good game in its own right. **B**

By backflipping away if you find yourself overwhelmed by any group of creatures. Use flips to get past floor whips, fire jets, and the like. You'll get past faster and often won't take any damage.

The various cannons and turrets in *Dystopia* pose a bigger threat than the Winches of *Dystopia*. Knock the Winches down with a rocket blast, quickly destroy the missile launchers and guns, then wipe out the Winches as they regain consciousness.

Even if your system doesn't support *Meat Puppet*'s high resolution, it's handy if you find yourself getting totally bombed to death in a room. Toggle the high resolution on, then scroll to get a larger view of an area, its dangers, and where switches are located. Once you're done with your reconnaissance work, toggle back to a lower resolution and use your new knowledge to lay waste to all.

APPEAL: Gamers hungry for an action-packed, darkly funny, third-person shooter.

PROS: Addictive, violently frenzied gameplay; great sense of black humor; impressive graphics and animation; wildly entertaining assortment of victims and obstacles.

CONS: Time limit for missions shortchanges exploration and gameplay; touchy controls complicate portions of the game; limited movement options reduce strategies.

Fast Beat

A Futuristic Ride of Ups and Downs

by Mark Clarkson

Imagine screaming down the greatest slide at your local water park in a jet-powered tube. At night. In a thunderstorm. Oh, and there are gaps in the slide, and a dozen other gaps are jet-lagging along with you, hurling bombs and rockets at each other and at you. Set it all to a pounding techno beat, and you've got my first impression of WIPEOUT XL.

The game's actual setup has you piloting a futuristic, anti-gravity race car over narrow, twisty banked race courses. You jump gaps, ride high on the walls, and work the air brakes to slide through turns—it's furiously frenetic, purely arcade action.

FAST BREAK

WIPEOUT XL is fast and it's gorgeous. I played the game on a P133 running an Orchiid Righteous 3D, and a P133 with a Diamond Monster 3D. (WIPEOUT XL requires hardware 3D acceleration.) Even at 640x480, the textures look remarkably clean. There are weather effects including lightning, rain, and snow I would have liked to see better explosions, light scattering from the weapons, and shadows that are darker than their surroundings (rather than

lighter), but none of these faults detracted from the gameplay. The game sounds pretty good, too, in full Dolby Surround.

You choose from four different craft with different attributes, which you steer with mouse, keyboard, or your trusty analog joystick. If you can win every race by dint of sheer reflex, great. If not,

WIPEOUT XL provides you with a plethora of fun weapons: salvoes of rockets, sizzling electrical bolts, guided missiles, mines, bombs, and the awesome Quake Disruptor, which churns the track like a giant shaking out his bed sheet. These weapons drain opponents' shields, slow their craft, and even destroy them. But rest assured: They'll be doing the same to you.

Watch your shield strength. If it drops too low, swing into the pits on alternate loop of track where your shields recharge on the fly. ♫ IN DESCENDING.

WIPE OUT

Unfortunately, WIPEOUT XL does have some problems.

The first is a pain for some, and a challenge for others: The game is hard. WIPEOUT XL has six tracks: two easy, two tricky, and two difficult. Come in first in all six races and you face the Arcade Challenge: same tracks, tougher competition. Take the gold again on every track, without finishing fourth or worse more than three times, and two new, really-damn-hard tracks appear. Good luck.

POWER UP You can pick up weapons, and other power-ups in the game, including shields and turbo boost, by running over special marks on the track.

SECOND TIME'S A CHARM WIPEOUT XL is the PC port of the PlayStation hit. The first WIPEOUT port was terrible, but this port is actually pretty good.

The second, and real, problem is XL's lack of head-to-head play. Hell, even the PlayStation version has head-to-head racing. Psygnosis says a multiplayer patch is on the way, though, with Internet, LAN, and modem support.

The game also had a slew of minor technical annoyances. It wouldn't recognize most of the buttons on my CH F16 Combat Stick, and had ongoing, varying problems with my CH F16 pedals. It wouldn't run in 800x600 resolution and, for some reason, it always turned the sound off in Windows 95.

WIPEOUT XL is a little limited. There are only six tracks—eight if you're superman. Still, if NEED FOR SPEED can't satisfy you, WIPEOUT XL could be your ticket to the fast track. ♫

HAPEE! Those searching for pure, fast arcade action.

PROS: Good graphics and sound; blindingly fast racing action.

CONS: Technical glitches, too few tracks, and no head-to-head play.

Price: \$49.99

Let the Blood Fly

Could Interplay's Gory Racer Be the Ultimate Racing Game?

by Peter Olafson

Somewhere along that stretch of country highway, between plowing through a herd of cattle and discovering that my roadster wouldn't make that monster loop-de-loop, it occurred to me: It's been a long time since a driving game has been as much fun as CARMAGEDDON.

This racer is like DUNE: NO. 2538 3D, as played from inside a scrambled pseudo-Corvette. It's got the guts, it's got the piggyback detail, and it's got the personality.

You're one of six participants in 36 open-ended races carved out of five bewitching 3D worlds (city streets, the beach, the American West, an Aspen-like snowy highway, and a treacherous factory) where speeds surpass 300 kph.

FOUR WAYS TO THE FINISH LINE

How your win is up to you. You can destroy all of your opponents by beating them to an automotive pulp—which this game's progressive damage illustrates perfectly—or by pushing their carcasses where the sun don't shine. You can kill every pedestrian on the streets. Or you can tick off the checkpoints in the right order and reach the finish line before an unforgiving clock runs out.

Any type of interesting chaos you can wreak along the way will grant you either an extension or add to your bankroll. A good head-on collision? Why not? The little old lady with the walker? Run her over. The streets are fairly thronged with pedestrians who shriek and flee upon your approach, and obligingly turn into clump on contact. A multiple somersault over one of the omnipresent striped barricades, or a 20-story leap of faith from a downtown office building? Do both.

All are standard operating procedure. Your starting car (others can be acquired along the way) is happily durable and bottom-heavy, and can take a good amount of abuse before it begins spouting smoke

STREAK TONIGHT? CARMAGEDDON's most hilarious feature is the comedic excess of violence. You gain bonuses for the more outrageous displays of gore and mayhem.

There's very little not to like about CARMAGEDDON. It has a range of aggressive opponents, a great, crunchy metal score and a symphony of sound effects: pointed and profane commentary from your Jay Leno-like driver, and small touches like skidmarks, bloody tire-skates, and delicate handling on grass and underwater. It also has a richness of off-road scenery and free-form structure I haven't seen since *Test Drive III*—a relief after the rift of recent "tough" racers.

I expect someone, somewhere, will make a fuss about the violence. It won't be me. While this would be a good racing game without the gore, it would be just a racing game, instead of the silly, magnificent black comedy it has become.

FINAL LAP

That's not to say that it couldn't be improved. The other drivers appear to key on your car and seem less interested in each other. The shop where you can upgrade your car between races is sadly generic and underdone. (Where are the James Bond staples like machine guns, rocket launchers, mines, and oil slicks?) Pedestrian targets also needn't be quite so helpless. Sidewalks and snipers would have been a nice touch.

CARMAGEDDON could also be a bit cleaner. The hi-res DOS version simply didn't work on my Pentium rig. On later tracks, the game had a tendency to freeze—sometimes for just a few seconds and sometimes for good. And, on one machine, unmaking the comical replay mode sometimes seemed like derailing the game to crash.

But the few problems I had with CARMAGEDDON never overrode its addictiveness, nor stopped me from playing, and I wound up answering each crash of the program with a dozen scolding ones of my own. CARMAGEDDON is the kind of game that most racing titles only wish they were: the fun kind. ☺

APPEAL: Racing devotees with strong stomachs, fans of *Dune Race 2000*, and people who think crosswalks are really crosshairs.

PROS: We don't have the space. Just about everything you could want in an arcade driving game.

CONS: At isn't the brightest; shop is out of stock; freeze-ups get to be a nuisance.

Price: \$49

Minimum System

Requirements: Pentium 90 or faster; Windows 95 or MS-DOS 6.2; 8MB RAM (16MB for Windows 95 version and network play); 4x CD-ROM drive; 20MB hard-drive space; 1MB VGA-graphics card (SVGA-graphics card [SVGA recommended]; supports Sound Blaster-compatible sound cards; Microsoft compatible mouse, joysticks, and steering wheels (Thrustmaster, Mad Catz, and Portomax).

Slapstick Fighter

Midway Brings Kombat to a 3D World of Cheesy Gods

by Kelly Rickards

WAR GODS, Midway's ill-received 3D coin-op fighting game, has finally been ported to the PC. The good news is the PC port is just about arcade perfect. The bad news is that it suffers from the same deficiencies for which the arcade game was criticized.

Basically, War Gods is nothing more than a polygonal MORTAL KOMBAT with a few added bells and whistles. Need proof? To begin with, the storyline in War Gods adheres to the MORTAL KOMBAT school of melodramatic, overwrought narrative and corny themes. Billions of years ago, an alien being's cargo of life-giving Ore crashed on Earth, scattering it over the molten surface of the planet. Through the millennia, ten humans came into contact with the Ore and were transformed into (insert drum roll here) Super-Exalted Warriors. These Warriors are the War Gods, and their destinies are intertwined, forcing them to confront each other in battle.

Don't even concern yourself with this bogus storyline.

CHEESE FACTOR

As with most arcade fighting games from Midway, the AI in War Gods' single-player mode is cheap to the point of being unfair. The CPU-controlled Gods fight with a technique known in the arcade fighting world as "turtling." The dreaded turtle technique is when a player blocks and positions their character in such a way that the opponent can do very little or no damage. As soon as the turtler sees the turtle commit a mistake, he attacks. This infuriating procedure forces a player to be aggressive while the turtle player simply waits to

attack with little or no risk. Fighting against a human turtler is difficult enough, but battling it out with a CPU player (who always attacks with perfect timing, executes the most damaging combos, and takes half the damage of the human player) is just too frustrating. Even if the game is played on its easiest difficulty setting, a novice player will struggle for a while before winning. Do yourself a favor and play against another human player.

MORTAL KOMBAT 4?

As I said before, War Gods is basically 3D MORTAL KOMBAT. Although the characters are different, War Gods has more similarities to MORTAL KOMBAT than differences. Some of the MORTAL KOMBAT hand-me-downs include: basic moves (uppercuts, sweeps, and the like) that are performed in exactly the same way; special moves and fatalities, also performed in exactly the same way as in MORTAL KOMBAT 1-3; and the ominous voice samples and sound (deep-voiced announcer, moody music, over-the-top groans, whelps, and cries of pain). By the way, did I mention this game is a lot like MORTAL KOMBAT?

Now, although War Gods isn't the greatest fighting game around, it does have some redeeming features. The basic gameplay in War Gods is similar enough to MORTAL KOMBAT that fans of that series can just jump in and have fun

WARPED GODS War Gods is Midway's testbed for 3D fighting.

It's an arcade fighter that's been ported to the PC almost perfectly. The gameplay is shallow, but still fun.

with the game. One of the (few) things I enjoy about MORTAL KOMBAT is how the game doesn't seem to take itself seriously. The way MORTAL KOMBAT presents even the most basic move with an over-the-top outrageousness has a certain entertainment value in itself, and War Gods is stamped from the same humorous mold. And while War Gods lacks the tactical precision of STREET FIGHTER (my favorite fighting game series) or the graphic flair of VIRTUA FIGHTER, it is easy to enjoy for casual fun. Just be sure to bring a friend along or you're toast.

APPEAL: Fans of MORTAL KOMBAT who have been waiting for the game to switch from 2D to 3D.

PROS: Gratuitous violence; cool fatalities; polygonal graphics; over-the-top humor.

CONS: Gratuitous violence; CPU opponents are too hard on even the easiest difficulty settings; gameplay lacks some of the precision seen in other 3D fighters.

Price: \$29.99

Minimum System Requirements: Pentium 60 (P120 recommended), Windows 95, 12MB RAM (16MB recommended), 2x CD-ROM drive (CD must be present to play), DirectSound-compatible card, DirectX-compatible Local Bus SVGA-graphics video card; supports Gravis PC game Pad Pro, Gravis GNP or other DirectX-compatible multi-player adapter. **Multiplayer support:** Hot seat (2 players).

Stormfront's TONY LA RUSSA 4 May Need Some Time on the Bench

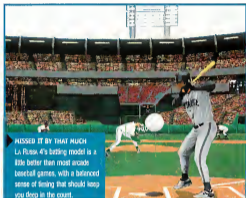

by Jim Gordin

TONY LA RUSSA BASEBALL 4, the latest version of Stormfront Studios' well-regarded baseball simulation, is an exercise in frustration. I found myself surprised by its ability to produce fairly realistic numbers in a very short amount of time. I was pleased with its attempt to provide full league support, a complete fantasy draft, and career play with a hint of minor-league development. But I was irritated with slow arcade play, sloppy stat-keeping, and an inability to blend rookie careers with established Major Leaguers. There's quite a range of function here, some of it implemented with surprising depth, but inconsistency spoils the overall package.

HERE'S THE PITCH

Pitching is the heart of any arcade baseball game. In *La Russa 4*, the pitcher begins the play by selecting from one to four available pitches. Coaches appear in the strike zone, then there's an endless amount of toe-tapping and button-shuffling while the pitcher waits to begin his windup. You can move the coaches to direct the pitch until slightly after the pitcher releases the ball. The pitch heads toward the selected area, affected by the pitcher's fatigue and his control rating. For the most part, pitches look fairly realistic—sliders suddenly drop as they approach the plate, and curveballs bend slowly according to their spin. But fastballs, change ups, and sliders never move from side to side, and a lunging curveball or slider is treated exactly like a belting change up.

I hitting, as in most games, is an exercise in timing a button press as the pitch approaches the plate. Stormfront did a great job with this, giving you a sense of pitch location just before it's time to swing. If you wait just a tiny bit too long,

you'll be a split second late to make contact. Because of this, *La Russa 4* is the only arcade game I've played where I found myself going deep into the count against the computer pitcher. If the pitch is in the strike zone, and your swing is well timed, you'll almost certainly make contact. There really isn't a sense of great contact versus mediocre contact, and ball direction and distance are more a reflection of the hitter's profile than an understanding of physics. But, all in all, if it weren't for the extremely slow speed of this game (even at its fastest settings, with stadium detail turned off), this would be an excellent batter-pitcher interface. The pitchers and hitters look very realistic, with movie-like animation of the windup, windup, and swing.

There's no differentiation among players, however, except for uniform and skin color.

The fielding interface is not as good. Fielders simply don't move very well in proportion to the size of the stadium. If a ball is hit right at a player, there's enough time to make the catch, throw the batter out at first base or even complete the double-

play. If the ball is out of reach, however, computer runners are off to the races. Fly balls between outfielders consistently drop for easy triples. On more than one occasion, I've seen a batter bunt the ball past the pitcher and the second baseman into the right side of the infield, before it finally came to rest a little way into right-center field. Switching to the correct fielder can take time, as can sending the second baseman out to retrieve the ball. The hitter stops at third with his bunt triple, then is credited with a home run as he scores when the sec-

Reader Service #: 333

BLINDING ME WITH SCIENCE For some inexplicable reason, Stormfront scrapped the appealing interface of *La Russa 3* for this rightmarishly hideous redesign. A note to the designers: Day-glo pink is not a Major League color.

and basemen's toss back to the pitcher goes straight to the mound, rather than where the pitcher is standing after failing to field the ball.

TAKE A NUMBER

Statistically speaking, *LA RUSSA 4* is virtually identical to its predecessors. It simulates games fairly quickly, and is easily capable of finishing a 2,000-game season in 15 minutes. The numbers are far better than any of the other arcade games on the market, but still fall short of the test-based games. Offense numbers are a little lower than in real life, especially in the American League, where the games average about 1 1/2 runs less per game than real 1996 numbers. Most seasons feature one player breaking the all-time home run record. Was this built into the game to add excitement?

Pitching is not simulated quite as well, with little interest in individual home run or walk totals. For which pitches a player is rated is almost random. Randy Johnson, the game's most feared strike-out artist, isn't rated for the slider, which many think is even nastier than his fastball.

LA RUSSA 4 lets you create leagues with varying division sizes and numbers of teams. It can create new schedules for these leagues and import teams from

other leagues. When simulating, it does a fair job assigning playing time, though there's a tendency to overuse the top setup reliever and no ability to set lineups beyond providing one against left-handed pitching and one against right-handed pitching. Even if your league is using the designated hitter and you have one in your pre-set lineups, simulated games will not use him, making stars like Edgar Martinez completely useless. That's almost certainly where the 1 1/2-run American League deficit comes in.

LA RUSSA also includes a fantasy draft module and the ability to trade against computer teams. It's easy to grab stars from opposing teams by offering up several mediocre players, however, and the computer does not draft particularly well. I was able to draft a 120-game winning team without preparation while going against the 27 computer managers. While the computer teams seemed to understand who the superstars were, they had trouble telling a mediocre middle reliever from a solid starting pitcher.

HIT THE SHOWERS

The *LA RUSSA* series has not aged well, despite its prominence in the market for several years. Bugs in scoring decisions reported in earlier

versions still appear here. The graphics display, state-of-the-art with *LA RUSSA 3*, is slow and behind the times. The extra modules, which should provide a lot of entertainment value for relatively little programming complexity, still don't work properly. If you own any version of *LA RUSSA* baseball created in the last three years, you won't find this much of an upgrade. It's a shame, because with so many mediocre titles out there, this should have been the time for a mature product to shine. *LA RUSSA 4* brings the series close to a demotion to the minor leagues. **C-**

APPEAL: Baseball fans who want a taste of everything, without requiring a great amount of depth. Fans who don't have either of the best two *LA RUSSA* releases.

PROS: Good statistical simulator; decent support for league play; fairly realistic gameplay.

CONS: Mind-numbingly slow speed on lower-end machines; statistics deteriorate in career play; poor understanding of baseball's dimensions; many errors in tracking stats.

On the Farm

The most appealing, yet most poorly implemented, feature in the game is *LA RUSSA 4*'s GM Challenge, a module that lets you compete against other teams in career play. Each season, the computer provides you with up to 25 minor league players to evaluate, with their positions based on whatever you decided to emphasize when scouting. Over time, the established veterans retire and your rookies develop.

Each season, you receive a scouting report and some statistics on each rookie, then have the option of replacing a player on your roster (retaining the rookie) or keeping him in the farm system. However, especially with pitchers, the evaluations seem random, and the only way to get a true sense of a rookie's

performance is to put him on the roster and look at how the computer rates him for trading purposes.

Established players retire each season, although their statistical ratings don't really deteriorate with age, so you should try to play as many years as possible at once, since the game doesn't always save career statistics properly. The rookies can pitch very well, and it's easy to find a

starter who can fill a gaping hole in your rotation. But they can't hit. After a few years, once the newcomers fill most of your starting order, your offense will suffer. It's not unusual to see team batting averages below .200 after seven or eight years of this simulation. Also, these newcomers make 95 percent of the errors in the field. It's not unusual to see Cincinnati's Barry Larkin make just two errors in a season while the rookie at second base makes two dozen. The GM Challenge was an excellent idea when introduced with *LA RUSSA 3*, but it's still not ready for prime time.

League Rankings		ZOBAMAN	
Position	1B	Age	20
Height	6'0"	Weight	180
Bats	R	Throws	R
Speed	8.5	Arm	7.5
Power	6.5	Control	5.5
Fielding	5.5	Baseball IQ	4.5
Overall	6.5	Cost	\$1.5M

BLAME IT ON COSTANZA *LA RUSSA*'s best feature is the GM Challenge, which lets you indulge in fantasy career play, but the statistical model is riddled with mistakes.

OBJECTIVES

1. KEEP YOUR OPPONENT FROM CROSSING THE PLANE OF THE GOAL.
2. INTRODUCE HIM TO THE FRAGRANT WORLD OF SMELLING SALTS.

Minor Leaguer

It's Better, but Sierra's Ambitious Baseball Sim Still Can't Make the Big Leagues

by Robert Coffey

You should know that FRONT PAGE SPORTS: BASEBALL PRO '98 has zapped many of the bugs that plagued the '96 version. Position players no longer lead

the league in saves, the pitch indicator works, and the World Series is no longer a one-game affair. Like its predecessor, it's a game of great promise, aiming to be the most comprehensive baseball sim yet. But lost among the glut of detail is a sense of real fun. More disappointingly, a new bunch of bugs (plus some old annoyances) can be found buzzing around the bat rack.

WANTED: COMMISSIONER

Any baseball fan who has lamented the boneheaded moves of their favorite team's management will love the degree of control in BASEBALL PRO '98. You had over every aspect of a baseball organization, from managing the minor leagues to designing the uniforms. If you're the kind of GM who likes making trades but doesn't want to bother with the amateur draft, the game will let you hand off various chores as you see fit. Simulating games still takes forever, but a new "Fast Sim" option reduces that to about a third of forever. "Fast simming" an entire season will still consume an entire day.

While the scope of league operations is commendable, it borders on bloated and gets in the way of the fun. Why teams can't be accessed simply by clicking on them from the league screens is beyond me, but the nonintuitive interface dictates a tedious series of mouse clicks triggering countless pulldown menus for every task.

HITTING THE WALL Frustrated by the game's refusal to reset after a fielding play, Atlanta's John Smoltz falls down after being directed to repeatedly bang his head against the outfield wall. You may want to join him.

New associations must have a minimum of eight teams and the length of the season can't be set except by choosing one of three options—bad news for six people looking to play a 40-game season.

There's no way to propose or execute three-way trades except as a series of day-consuming two-way deals. And BASEBALL PRO '98 has no designation for utility players, slotting players only one extra qualified position. San Diego's utility-man extraordinaire, Ardiel Cuanfranco, is listed as a first baseman and pitcher, in spite of his playing every infield position and catching last year—and all of them more than the one or two innings he pitched. But put him at second and you're begging for errors.

THE UNNATURAL

BASEBALL PRO '98 still makes the mistake of principally defining players

through ratings for their attributes. While these numbers can be tweaked during spring training and can be modestly useful in assessing talent during amateur drafts, they aren't really meaningful in predicting performance, since highly rated players like Tony Gwynn can have hideous seasons (see sidebar).

Yet you're confronted with these numbers consistently, even though changes in batting averages, RBIs, and strikeouts totals are what define and shape both the players and the season. For all of BASEBALL PRO '98's flexibility, there's no way to get the game to show historical, or accumulated, stats in the pitching/batting screen or even to set them as defaults in the manager's lineup card.

Accumulated averages and current game stats do show up in one of the many windows that clutter the screen during games, a ticker that acts as a

sort of silent play-by-play guy. Gamers with less robust computers will want to close the window to enhance performance, while everyone else will close it (along with other unnecessary windows) so they can see the game better.

FIELD OF SCREAMS

Depending on levels of difficulty selected, gamers can decide when, how, and where to swing the bat. Pitching requires deciding which pitch to throw, where to throw it, and how fast it will go. As for fielding, well, you had better let the computer do it. At anything above the easiest setting you must arm your fielder at a diminishing circle to catch a ball in the air and then, instead of just pressing a certain key to throw to the proper base, you have to line up the player to the bag and throw.

Letting the computer field the ball means putting your faith in a Little League-caliber fielding AI. The kind of AI that has the left fielder run in past the ball to cover second while the second baseman is running out to left to get the ball after a bad throw from the first baseman.

Somewhere this makes sense to someone.

There's more. For too many balls are hit right back to the pitcher, and computer-controlled batters never swing at a pitch out of the strike zone. Watching the ball carry and carry in Coors Field's high altitude is kinda fun, as is being thrown off-balance by a sideswinging pitcher when you're at the plate, but the lockstep games just don't generate all that much excitement.

More than a decade ago, with less technology and less powerful computers, EARL WEISER BASEBALL had many of BASEBALL PRO '98's features and loads more fun. That's why it's in this magazine's Hall of Fame. FRONT PAGE SPORTS: BASEBALL PRO '98 is getting better, but it has a long way to go to fill EARL's shoes.

SEW MANY OPTIONS Because Pro '98 lets you control virtually every aspect of your team, including designing butt-ugly uniforms that negate the need for lights during night games.

Pain by Numbers

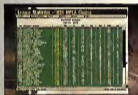

While the '98 version of FRONT PAGE SPORTS: BASEBALL has improved its statistics model by spreading out the numbers, many players still seem to be playing in an alternate, Bizarro World baseball league.

Gamers looking to draft a Baseball Pro '98 league should expect the unexpected.

It's unfathomable how Tony Gwynn, with a .337 average over a 15-year career (highest among active players) and seven batting titles, can be batting .196 at midseason and finish at .221, just one point above light-hitting Roy Ordonez. His 1-for-27 start probably explains how he finished behind Eric Karros' league-leading .353 (.260 last year, .264 over six years). If this ever happens in real life, look for a plague of locusts to follow.

Over in the American League, Albert Belle managed to add almost 100 points to his eight-year average of .285 by making a run at .400 and leading the league at .389. And while Jay Buhner's 185 RBIs (5 short of the all-time record for a season) is remotely conceivable, notoriously free-swinging Ozzie Guillen's 55 walks is not. The man had just 10 in 1995 and has averaged 14.25 over a 10-year career.

BASEBALL PRO '98 doesn't do much better with pitching. While Kevin Brown dropped just a point on his real-life 1.69 ERA, Randy Johnson stayed healthy through a simulated season to post ugly numbers—a 27-6 record, 1.69 ERA, and a staggering, league-leading 342 strikeouts. Johnson also led the league in leaping tall buildings in a single bound and locomotive racing. Baseball Pro '98 just doesn't understand pitchers, making most successful hurlers power pitchers, in spite of real life. Future Hall of Famer and control specialist Greg Maddux led the league with 322 strikeouts and a 1.27 ERA. Not exactly the profile of a man who has averaged 149 strikeouts over an 11-year career and did well with 172 last year.

NEW MATH Shortcomings in the statistical model are painfully obvious when looking at future Hall-of-Famer Tony Gwynn's league-worst batting average at midseason.

APPEAL: Would-be baseball commissioners and GMs more concerned with minutiae than realism or entertainment.

PROS: Host of options simulate almost every aspect of baseball; many old bugs have been fixed.

CONS: Interface not up to handling a game this size; new bugs have replaced the old; poor fielding AI; can't fully customize leagues; no modern play; game just isn't much fun to play.

A Real Slam

Any Relation to Baseball Is Purely Coincidental

by Dennis McCauley

Virgin's NHL POWERPLAY '96 turned a few heads last year, which makes it all the more surprising that GRAND SLAM looks so much like a nookie effort. In fact, GRAND SLAM has the look and feel of a console

game—and while there's nothing wrong with a good arcade simulation of the national pastime, GRAND SLAM offers none of the sophistication of its ever-growing list of competitors.

The game is attractive, especially on systems with 3D acceleration, and graphically shows the different body types among the players. Albert Belle, for example, offers a much stockier silhouette than a Brady Anderson. Batters blow bubbles, call time, or groan at a bad call. Pitchers do their part too, shaking off signals and scooping dirt from the mound. It's a shame that GRAND SLAM's viewing angles aren't more flexible, as I'd enjoy seeing what the rest of the players might be up to in the field. On the downside, the uniforms lack numbers, team names, and logos, and the players are clad in less-than-accurate home and road uniforms.

THROWING A SINKER

There are several modes of play, including practice, exhibition, and seasonal (of 13, 52, or 162 games), as well as a home-run derby. GRAND SLAM also simulates games with admirable speed, but it gets nowhere fast. In one 162-game season stressed for this review, 303 batters hit over 300. Another dozen swiped more than 50 bases, and home runs far exceeded even today's record highs. With offense so dominant, pitching stats were equally out of kilter. In the same replay, 21 pitchers lost 20 or more games. In a very strange statistical bag, more than 150 pitchers had N/A listed as their

INFINITE SLUGGER Home runs leave the launch pad in record numbers, regardless of whether you're playing arcade or sim mode.

career run average, despite clearly having a calculable ERA. The game also mixes NL and AL players together, a major league no-no sure to drive baseball purists crazy.

What really soured me on GRAND SLAM, however, was its brain-dead roster AI. Having fought my way through the game's clunky interface, I was ready to do some wheeling and dealing at the trade screen, where you can propose swaps and sift through offers from other clubs. In a lopsided deal, I offered star Yankee CF Bernie Williams to the Phillies for light-hitting backup catcher Mark Parent. Now, any GM worth his cigar would have accepted this deal in a New York minute. GRAND SLAM's Philadelphia team, however, rejected it, asking me to throw in more players! In my next try, I offered ace pitcher Andy Pettitte to the Mets for journeyman reliever Tody Borland. The Mets not only declined my offer, but asked me to add a catcher to the deal. Since the Mets already had ace Todd Hundley behind the plate, I was left scratching my head.

GRAND SLAM does have some nice arcade aspects. Pitching uses a power meter, which causes variations in pitch

velocity and location. Batting can be challenging, requiring that you time your swing, while moving the bat up, down, or laterally through the strike zone to compensate for pitch location. You can also choose to control fielders and runners, or delegate these chores to the computer. But the bottom line on GRAND SLAM is that it doesn't play anything like real baseball. It could have been a pleasant diversion for casual fans, but the non-intuitive interface and terrible AI deny it even that modest goal. With the great number of baseball games out there, why buy one that gets so many things wrong? **C-**

PAPPEAL: Only for those who must own every computer baseball game.

PROS: Decent player graphics and stadium renditions; MLBPA licensing.

CONS: Looks and feels like a bad console game; awkward interface; weak stat model and presentation; brain-dead trade AI.

G-O-O-A-A-L!!!

Maxis Sports' KickOff 97 Sets a New Standard for PC Soccer Sims

by Scott A. May

Developed in Britain by ANCO Software, KickOff 97 is the second title of the year from Maxis' new sports line, and this one is a beauty. The game has two critical attributes that none of its recent competitors can boast: razor-sharp artificial intelligence and gameplay so intense it will make your head spin and your fingers numb. If you're looking for soccer action at its digital best, you've come to the right place.

Playable from either DOS or Windows 95, KickOff 97 supports resolutions up to 640x480 and a 256-color depth. Although the game makes no use of accelerated hardware, it doesn't need to—you'll experience absolutely manic game speed and fluid animation, even on systems below the recommended minimum requirements. At last, a game that doesn't penalize gamers with limited resources.

TEAM PLAYER

The game's national and international rosters include more than 300 teams, comprised of more than 5,200 players. There's no official license, however, so don't bother looking for your favorite soccer star here. A player editor lets you change names and uniform appearance, but not positions or skill levels. You can also create your own Dream Teams, picking the top players from all available leagues. Game modes include practice, single friendly matches, 30-round league challenge, and national/World Cup playoffs. There's no online multiplayer or LAN support, but the game can be played head-to-head on one computer.

FOOTIE CAM Gamers can view the action in KickOff 97 from 36 different camera angles, which should let you see exactly how the game's killer AI just kicked your butt.

Unlike in many other soccer games, the practice mode isn't just a lame menu option here. KickOff 97's practice mode is a full-blown tutorial of soccer mechanics that includes passing and receiving, dribbling and shooting, penalty kicks, goal keeping, cross-ins, corner kicks, and free kicks. When you think you've mastered them all, you can test your skills in the decathlon-style tournament practice.

And make no mistake—you'll need plenty of practice to face the game's outstanding computer-controlled players. Though artificial intelligence can be a somewhat intangible quality to measure, this game's AI will kick an average player's butt all over the field. With almost no exceptions, the computer-controlled competition is fast, precise, and utterly ruthless in its charge on your goal.

There are no skill levels to speak of, other than the overall quality of the team you're matched against. Arcade mode plays a little loosely, but simulation

mode cuts unprepared human players absolutely zero slack.

BUMP AND GRIND

On-field graphics are sparse, but well designed. Players are composed of texture-mapped polygons, motion-captured to a fault. The range of realistic player movements is a sight to behold. Victims of brutal tackles typically languish on the turf for several seconds, as if reeling in pain or at least shaking the stars from their heads. Others may stand up and begin pushing or fighting, joined by other hotheaded players. When the referee issues a yellow or red flag, offending players vehemently argue the penalty. Goalkeepers bemoan each missed block and even appear to point an accusing finger at their teammates. In other words, the animation is fluid and surprisingly diverse.

Player control is tight and responsive using a joystick (digital or analog), keyboard, or mouse. A variety of command combinations lets you perform a host of

Price: \$39.95
Minimum System Requirements:
 Pentium 75 or faster for Windows 95 or 486DX2-66 for DOS, 16MB RAM for Win 95 or 8MB RAM for DOS, SVGA graphics, 50MB hard-disk space for Win 95 or 50MB for DOS, 2x CD-ROM drive, mouse, joystick, supports Sound Blaster-compatible sound cards.
Multiplayer Support: Hotseat (1-2 players).

precision offensive and defensive moves, such as overhead (bicycle) kicks, volley passes, diving headers, back heel kicks, bending (banana) shots, spin (forward or reverse), cross-ins, and three types of

tackles (short, slide, and dirty). The learning curve is fairly steep, but definitely rewarding when you begin to execute complex moves in the heat of action.

Graphic displays can be set to either

isometric 3D or overhead 2D, viewed from a total of 36 hot-key selected camera angles. Don't have a Pentium? No problem. Simply change the video resolution to 320x200, which turbo-charges the frame rate, even on a mid-speed 486. In this mode, the visuals may

suffer from blockiness, but gameplay smokes and the level of animation detail remains intact. Other goodies include a tactical editor for changing player formations, and the ability to save up to 32 replays to disk.

KICK IN THE HEAD

Overall, KickOff 97 is an excellent soccer sim, notable for its blazing action, detailed animation, and deft computer AI. If you've been waiting for a soccer game that's challenging and just plain fun to play, look no further. **B**

FAVORITE: Action-oriented tactics fans.

PROS: Exceptionally fast and smooth gameplay; challenging AI; runs great even on slower systems.

CONS: No online multiplayer support; limited team/player editor.

ON YOUR FACE KickOff 97 features some of the most diverse motion-captured animation and intense soccer action in its class.

Plant Trees for America™

Trees provide food, shelter, and nesting sites for songbirds.

Trees increase property values, and make our homes and neighborhoods more livable.

Trees help conserve energy. They cool our homes and entire cities in the summer, and slow cold winter winds. Shade trees and windbreaks can cut home utility bills 15-35%.

Trees clear the air we breathe. They provide life-giving oxygen while they remove particulates from the air and reduce atmospheric carbon dioxide.

America needs more trees

The United States has lost a third of its forest cover in the last 200 years.

Our towns should have twice as many street trees as they have today.

We need more trees around our homes and throughout our communities. We

need more trees to protect our farm fields and our rivers and streams. To provide wood for our homes and a thousand products we use every day.

10 Free Trees

Ten Colorado blue spruces, or other conifers selected to grow in your area will be given to each person who joins

the Arbor Day Foundation.

Your trees will be shipped postpaid at the right time for planting in your area, February through May in the spring or October through mid-December in the fall. The six to twelve inch trees are guaranteed to grow, or they will be replaced free.

To become a member and to receive your free trees, send a \$10 member-

ship contribution to Ten Blue Spruces, National Arbor Day Foundation, 100 Arbor Avenue, Nebraska City, NE 68410.

Join today, and plant your Tree for America!

Hook Shot

EA Sports' Latest Gets No Eagles

by Scott A. May

In case you haven't noticed, it's boom time on the digital greens, as more golf sims than ever vie for space on your computer screen. Yet beyond new graphic engines, improved physics models, and multiplayer capabilities, most publishers prefer to play it safe than to tinker with success. Such is the case with EA Sports' PGA TOUR Pro, a solid, but rather conventional, Win 95 update to the company's venerable golf franchise. In a nutshell, this game will neither disappoint nor inspire.

FAMILIAR SET OF CLUBS

EA Sports may have lost its cutting edge in the football, soccer, and basketball arenas but, as most fans will be happy to find, it's nearly impossible to screw up an already good golf simulation. Aside from a few new graphic flourishes—including a revamped interface and ambient animation—the design team sticks with the boilerplate design that made the previous DOS versions so palatable.

Originally packaged with only two 18-hole courses, TPC of Scottsdale and Bay Hill Club, this version adds the Peach Beach course disk as a bonus.

The game is also compatible with older DOS-based courses including TPC at Sawgrass, Spyglass Hill, TPC at Awenel, and Spanish Bay. Game modes include practice, stroke, tournament, skins, and shoot-out, and are playable with up to four people via modem, LAN, or EA's free Internet sports network. As many as 20 four-somes can compete in online tournaments. Logging on to EA Sports Net is a no-brainer; finding available Internet competition, however, proves much more difficult.

Course graphics are suitably photo-realistic. Rendered in realtime, the instant screen updates employ EA's proprietary Flash Draw technology

IN A SQUARE GROOVE Just as *Swing Golf* and *Front Page Sports: Golf* are trying new swing meters, PGA gives up its unique swing for a standard circular meter.

Motion-captured digital golfers are set against a backdrop of textured polygons and sprite-based graphics, boasting a maximum 800x600 resolution and 16-bit color depth. MMX support is provided, as well as DirectPlay, but otherwise the game requires no special 3D hardware or software acceleration. Overall graphics quality is good, although a low-polygon tile count makes the foregrounds appear slightly flat, and thus they lack the illusion of depth.

If you are familiar with the PGA TOUR series, you'll find some new touches to gameplay. You can walk the course in realtime to read the greens. Individual hole fly-bys, augmented with audio commentary, let you map your pending strategies. There's even a special "risk meter" to gauge the difficulty of your upcoming shot. On the downside, EA has changed their once-unique swing overlay to a more traditional circular meter.

If Win 95 online gaming is your prime consideration, PGA TOUR Pro is worth the upgrade. Otherwise, stick with EA's previous DOS-based PGA TOUR titles, which are still among the best in the business. **S**

LAG A LITTLE This shot shows one of PGA Tour's assets: reading the greens in realtime.

APPEAL: PC golfers, especially those who enjoyed the earlier PGA Tour games.

PROS: Smart, clean interface; good course selection; choice of three multiplayer modes.

CONS: Adds little to an overcrowded genre; high system requirements.

STOP PLAYING BY YOURSELF

(PLAY HEAD-TO-HEAD ON THE INTERNET)

QUEST FOR THE BEST INTERNET CHAMPIONSHIPS WIN \$10,000

DETAILS IN EVERY GAME

3 GREAT GAMES! 3 WAYS TO WIN!

Now you can play ABC Interactive's extremely live sports CD-ROM games in a live competition on the Internet.

It's the **Quest for the Best Internet Championships**.

Huddle up with thousands of sports sim players from across the country and play head-to-head sports sims in real time. Here's how to play:

- Purchase any or all three games: ABC's Monday Night Football '98, ABC Sports Indy Racing or ABC Sports College Football.
- Register at www.abcinteractive.com
- Compete in qualification rounds.
- Advance to the finals and compete for the \$10,000 grand prize for each title.
- 2 Finalists in each competition are flown to the ultimate on-site location: ABC's Monday Night Football '98 at SuperBowl XXXII in San Diego, ABC Sports Indy Racing at the Indy 200 at Walt Disney World or ABC Sports College Football at The Rose Bowl in Pasadena.

So pick up ABC Interactive's CD-ROM games and practice, practice, practice. Because this isn't a game, it's a competition. If you're not ready to compete, stay home and play something less challenging. Jacks, anyone?

EXTREMELY LIVE.™

Competition valid in AR, CA, IL, MD, MA, NY, VT and where prohibited by law. See ABC's Monday Night Football '98, ABC Sports College Football and ABC Sports Indy Racing CD-ROM games for details. Contest subject to full rules online at www.abcinteractive.com or by sending a self-addressed, stamped and envelope for QUEST FOR THE BEST RULES REQUEST, P.O. Box 1981, Melville, NY 11731-7981. Qualification for ABC's Monday Night Football '98 ends 12/1/97. ABC Sports College Football ends 12/31/97. ABC Sports Indy Racing ends 12/31/97. U.S. residents 18 or older only. Four winners will be selected each week to advance to the playoffs (two for Indy Racing). Dates and times subject to change. See website for details. ©1997 QFT Sports, L.L.C. ALL RIGHTS RESERVED. In a Jam

Better Brains Through Puzzle-Solving

by Charlotte Panther

Smart Comes broke into the puzzle genre with CHALLENGE #1, a wonderful collection of word, strategy, and perception teasers. They followed with WORD PUZZLES, which was great for wordsmiths, but lacked the variety of CHALLENGE #1. Now, Smart Comes is back with STRATAJAMS, another collection of puzzles guaranteed to set your cogs turning.

FINAGLED IN 'FRISCO

STRATAJAMS provides 351 all-new brain-teasers, based on six of CHALLENGE #1's popular strategy puzzles. Top of the list is *Car Jam*, a devilishly addictive 75-level puzzle, which has you playing the part of an anxious valet in a parking lot chock-full of cars, limos, school-buses, trucks, and Hummers. The idea is to move a red car through the lot to the exit in as few moves as possible. Each move costs you points, the rate at which you lose points increases every ten moves, and you are penalized for running over obstacles like manholes and traffic cones. With only a couple of vacant spaces in which to maneuver,

solving this puzzle is as difficult as finding a parking spot in San Francisco on a Saturday night—but far more fun.

Would-be farmers don your overalls, hop aboard your tractor, and get ready to plow your way through 50 levels of *Cash Crop*. The object is to harvest your crops as you drive your tractor over the land. Each crop reaps a certain monetary value and your task is to earn as much as possible in the allocated farming days. Water and fertilizer raise the monetary value of crops, and gas pickups increase the number of farming days available, while swamps, mud, and rocks all hinder you in some way.

Then there's *Traffic*, the puzzle that offers megalemonades the opportunity to decide the fate of city streets by controlling the traffic signals and combating gridlock. After studying the flow of traffic, you must set the timing of the lights, taking into account the speed and number of vehicles, so that traffic moves through the intersections and off the screen as quickly as possible.

The other three games are electronic versions of distractions you may remember from childhood, adapted with the usual Smart Comes practical, yet stylish flair. There are 50 *Sliding*

HAPPY HARVESTING While driving your tractor across your land you'll discover the joys and tribulations of farming. The more you reap, the more you score.

Tile puzzles and 75 levels of *Marble Jump*, a checkers game. Finally, there's *Warehouse*, a '90s variation of petal-dish puzzles—those little plastic cases containing ball-bearings that you must guide into target holes.

If the strategy puzzles were what you really enjoyed in CHALLENGE #1 and you want more of the same, then STRATAJAMS is for you. (And if you get through these and want even more, Smart Comes is offering add-on packs for individual puzzle-types, for under \$10.) Keep in mind, though, that anyone wanting the variety of teasers found in CHALLENGE #1 is likely to be disappointed—at least until SMART GAMES CHALLENGE #2 hits the shelves later this fall. ☺

Flank Attack

The Most Hard-core of Sims Gets Even Harder

by Robin G. Kim

SU-27 FLANKER has a well-deserved reputation for being a flight sim for the truly hard-core. This is due not only to its difficult missions and detailed flight, avionics, and battlefield modeling, but also to what was left out: The lack of pretty graphics and campaign play were generally enough to frighten off all but the most serious sim fans. The SU-27 FLANKER I.5 MISSION DISK goes far toward rounding out the original's appeal, and brings more than 150 additional missions and some exciting new capabilities to the table.

EXTENDED PLAY

The most intriguing enhancement to stand-alone play is the ability to fly multiple sorties over the course of a single mission. After landing you can save the world state, plot a new flight plan for yourself and other aircraft under your control, select ordnance, then hop back into the cockpit for another go. Everything picks up right where it left off, except that any weapons in flight will have disappeared. In support of this extended mission structure, a scenario can now span multiple days, turning a single mission file into a sort of mini-campaign—albeit a predominantly prescripted one. No scenarios this elaborate are included on the CD, but Mindscape promises to make some available on the FLANKER Web site (www.su27-flanker.com) by the time you read this.

True branching campaigns are now available, courtesy of Hideo Fukumoto's Flanker Campaign Shell. This, Mark Hemmings' Random Mission Generator, and most of the missions in the add-on were actually produced by dedicated members of the FLANKER player community and have been available for some time to anyone with Web access. Even so, the mission disk provides the entire collection neatly organized and cataloged in one place.

NET GAINS

Devotees of multiplayer action should find much to be excited about in the sim's completely revamped network play. Far surpassing the two-player head-to-head mode of the original game, the add-on allows for up to 16 players in cooperative or team play over a LAN. The introduction of direct TCP/IP support means it is also possible to connect over the Internet without using Kali or Kahn, though latency and bandwidth limitations restrict both the number of players and the mission complexity.

A master/slave architecture lets players on the slave PCs plan their own missions and quickly rejoin if killed or disconnected. The master PC guarantees acceptable performance levels by ruthlessly disconnecting any slaves that do not meet its standards, a system that works well in practice. FLANKER's excellent mission recorder can now tape multiplayer scenarios, letting you figure out exactly how your Net buddy got lucky enough to down you in that last dogfight. Also, you can't simply ask how he did it, because that's still no chat feature.

Other new features include improved AI, which now demonstrates enough of a self-preservation instinct to evade incoming missiles and maneuver to break radar locks; an overhead AWACS view, which gives you the big picture in realtime, and 16-bit color Convex shaded graphics. The latter are visible only in external views and cause such a slowdown on systems without OpenGL

hardware accelerators that they are almost worthless.

The mission disk breathes new life into FLANKER, offering a more robust package for those who felt the original game was too stonk, and providing enough new

SLIDE SHOW Gouraud shading enhances the object and terrain graphics, but at a huge cost in frame rate unless you have an OpenGL graphics card. Since it's available exclusively in the exterior views, only sightseers will benefit.

gameplay options to make it a must-have for existing owners. However, SU-27 FLANKER is still a hard-core sim that won't appeal to everyone—especially those who demand eye-popping visuals. Improvements on that front won't come along until FLANKER 2.0, due out around the end of this year. **B**

HAPPEAL: Su-27 FLANKER owners who desire more missions to fly, broader gameplay options, and greatly enhanced network play.

PROS: Multiple-scenario scenarios; excellent multiplayer options; branching campaign support; improved AI; tons of new missions; low price.

CONS: New graphics so slow they're not worth the bother; no multiplayer chat; much of the content available for free on the Net.

Price: \$14.99

Deep Sim

Jane's Has Ordered Up a Sub With the Works

by Kevin Turner

Submarines are a wonderful combination of technology, experience, and skilled manpower—the likes of which cannot be found anywhere else. Nuclear-powered, with crews of the highest trained seafarers the world has ever known, and carrying levels of destruction unimaginable to the layperson, submarines surreptitiously patrol the waters of the world. When it comes to military might per cubic foot, they have no equal. And now that JANE'S 688(I) HUNTER/KILLER has hit the shelves, these mighty boats are finally getting the recognition they deserve.

MIL SPEC

The first time I played this game, I knew it would do for submarine simulation what FALCON 3.0 did for flight sims. There are games that define genres, and 688(I) HUNTER/KILLER is one of those games. After a very long wait, the modern submarine simulation has come of age.

688(I) is a collaborative effort by the game developers of Jane's Combat Simulations and Sonalysts. Sonalysts is a defense contractor and designer of submarine training software for the U.S. Navy and has been conducting

SCOPE IT OUT The periscope has low-light capability, a camera, and an excellent field of view. Its ESM indicator can inform you of nearby hostile emissions.

modeling and simulations for the Navy for more than 20 years.

688(I) is modeled accurately after a Los Angeles-class submarine. The performance characteristics are as accurate as I'm willing to admit to in print, especially with the realism patch Jane's has released. The AN-BQQ5 sensor system is extremely well done. Available weapons include the Mark 48 torpedo, Tomahawk and Harpoon missiles, and mines and countermeasures. The weapons parameters are accurate all the way down to the wire guidance and vertical launchers.

As you assume command of your submarine, you'll have the opportunity to take on training missions, single missions, or a campaign. Training missions allow you to play a campaign or single mission without risk of death. The single missions are increasingly challenging and utilize different aspects of submarine operations such as Tomahawk attacks, antisurface and antisubmarine warfare, and rescue missions.

Campaigns start in the Caribbean, then proceed to the Mediterranean, the Persian Gulf, and the North Pacific. Each campaign comprises several missions, which must be completed in order.

STATION IDENTIFICATION

688(I) places you at the center of the sub's control room. You can take an active role in sensor, fire control, or tracking, or you can sit back and prosecute the target as the big cheese—your level of involvement is discretionary. Each of the stations in 688(I) is a composite of several watchstations. For instance, keeping

MISSION FISHIN 688(I) includes a comprehensive mission builder that can cause objects to appear at random locations.

CHEAT VIEW External cameras let you zoom around your boat, look at enemy craft, or ride weapons to their destinations.

Price \$59.95

Minimum System

Requirements: Pentium 90, 16MB RAM, 12MB hard-disk space (plus 100MB for Win 95 swap file), DirectX compatible SVGA graphics, 4x CD-ROM, Windows 95, sound card, mouse.
Multiplayer Support: Modem (1 CD per player for all multiplayer options), Internet (2-8 players), LAN (2-8 players).

PING ENEMY.COM Want to learn about submarine sonar? This is the place to do it, with the best representation you'll find—short of an enlistment.

depth and course takes four people in reality but is handled by one in the game.

The three main elements of your control-room battle-stations gang are the sonar team, the tracking team, and the fire-control team. Each of these is given an identity and a level of experience. The level of experience increases as you undertake more operations. When first starting out, it's important to be a hands-on sleeper, paying close attention and ensuring excellent performance. As the crew's experience increases, this becomes less important. Stations include the Ship's Control Panel, Sonar, Radar, Radio/ESM (Electronic Support Measures), Periscope, and Navigational Charts, among others.

The acid test for me was at the sonar station, which is outstanding. It allows the player to choose between broadband, narrowband, demodulated noise, active intercept, and active sonar modes. Narrowband is used for target identification using frequencies; DEMON, or demodulated noise, is used to establish target speed; active intercept is used to intercept active sonar signals; and active sonar is, well, active sonar. The broadband sonar display uses the waterfall that all submariners know and love. A sonar contact is displayed as a line of brightly colored pixels, which represents the target's bearing. Establishing a range on the target and target speed can be accomplished using the periscope, active sonar, radar, or target-motion analysis.

A MOTION PICTURE

The TMA screen was new to me. In my day, we did it on a huge piece of paper and at two or three different plotting tables. One table plotted bearing rate, while another used the motion of the submarine

Zeroing In on the Target

Target-motion analysis is a process by which information is gathered on a target's bearing and interpolated into its range, speed, and course. To imagine this, think of yourself as a submarine. If you hear something, then you can establish a bearing for that target, but not its range. If you move to your left, the target will have a new bearing. This bearing is compared to the original and an intersection is provided. Considering the very long ranges and the very small angles being used, with a number of course changes from side to side, you can establish a range. Part of this process also establishes target speed. By knowing the target speed, range, and course, it is possible to launch a weapon at a point

ATTENTION TARGET SHOPPERS The TMA center helps you with the most difficult job in submarining: getting a firing solution based on time-motion analysis.

where the target will be in a few minutes. Don't forget that the maximum range of a Mk. 48 torpedo is in excess of 20 nautical miles. While a torpedo will actively search for a target once you send it, a small mistake can mean a miss. And a miss means that the target now knows that someone very unfriendly is out there.

(making course changes to establish range information based on triangulation) to establish target range. This process is rather simple if the target never changes course. Unfortunately, targets have a nasty habit of changing course (and speed) quite regularly. The TMA screen combines all these stations into one, easy-to-digest Web of information. If you're looking to enhance your crew's performance, this is the best place to start, as this is the most difficult station to operate.

In addition to the accurately modeled stations, you'll find volumes of reference data. The Ship's Information Book contains a wealth of information on your new command, and you should refer to it regularly. The game also includes an abbreviated copy of *Jane's Fighting Ships*, which is a gold mine of data and will help you classify contacts more readily.

A Pentium 90 is considered the minimum for this game, but you'll be better off with a 133MHz machine or better. An external 3D view lets you observe any object in the game from a variety of perspectives—ever wonder what it looks like to ride a torpedo?

The mission builder promises extended play; missions are already popping up on the Internet. Multiplayer play is included,

although all gamers captain 688(I)-class boats in this mode.

This game is technologically accurate, intriguing, and contains that elusive balance between reality and entertainment. I've brushed over some of the game's better features, but there are many others. There is one downer: You have to download a patch from www.janes.co.uk to slow turn rates and reload times to a realistic pace.

If you've ever wondered what it's like to be on a submarine but have no desire to forgo fresh food, females, and freedom, then this game is for you. If you're like me and have some experience in the real thing, after playing 688(I) you may find yourself taking readings on the microwave and water heater with a night-vision flashlight. ☸

APPEAL: Simmers looking for a realistic, systems-level simulation of a modern submarine.

PROS: Excellent modeling of sub systems and weaponry; superb reference and tutorial information for beginners; great mission builder.

CONS: You need a patch to slow turn rates and reload times.

Raptor Unwrapped

The Latest F-22 Sim Hides Innovations Beneath a Quirky Surface

by Tom "KC" Basham

The F-22 mission continues with iF-22, the first simulation developed in-house by Interactive Magic. An admissible first effort, this simulation of the Air Force's "fighter for the 21st century" will please many with its convincing flight model and long-playing dynamic campaign engine, but issues related to the sim's hardware support may confound some gamers.

DYNAMIC PLAY

iF-22's single-player gameplay has four basic modes: instant action, training missions, individual missions, and full-blown campaigns. iF-22 revives the dynamic campaign, which most sims have replaced with pre-scripted missions, so you'll never get that "been there, done that" feeling. After selecting a theater (Bosnia and the Ukraine are included) for single-mission play, the generator populates the world and

provides a fairly long list of missions. This list contains a variety of air-to-air and air-to-ground sorties.

The campaign mode bears some similarity to Falcon 3.0's campaign system, as well as to EF2000's Wargen engine. The system generates a world, assigns missions to friendly and enemy forces, and then presents you with a list of assignments for your squadron. You then choose which assignment you want to fly and proceed to the mission planning screen. The mission planning system covers all the

► **SLUDGY 3D** iF-22 supports Direct3D, but not very well; frame rate is slower than the top-notch 2D performance, and many potential 3D features, such as transparent smoke, are absent.

basics, providing nearly full control over your flight path and loadouts. It does restrict flight path planning under some circumstances. For example, on escort missions, you can't change any of your pre-assigned waypoints.

You can start on the runway or in the air. Before each mission, the campaign briefing indicates where the allied forces intend to launch offensives and where intelligence believes the enemy will counterattack. After each mission, the debriefing system details whose forces gained or lost territory. If you crashed and burned, you can have your pilot miraculously rescued; you can also choose to refly the mission. iF-22's multiplayer support includes free-lar-

Instruments of Destruction

iF-22 features a detailed cockpit with mouse-clickable switches. The avionics incorporate many of the whiz-bang, 21st-century features anticipated for the real F-22, such as the ability to incorporate downlinks from ANVACS and other F-22s on the threat display. Nine multifunction display (MFD) modes are available. In addition, there are five MFD packages—default setups combinations of the four MFDs. You can select any mode on any MFD, or custom configure the five MFD packages before entering the cockpit through the setup menus. For example, you can configure the Dogfight package to contain the defense, attack, tactical, and status displays, and then simply press the Delete key to set all the MFDs instantly to this configuration.

Price: \$54.99

LOW RIDER The terrain looks fantastic at high altitude, but less so down low; it's blocky in 2D mode, and blurry in 3D.

all dogfights, a team-based capture the flag mode, and cooperative single missions. Disappointingly, there is no way to fly multiplayer campaigns. The simulation supports direct serial, modem, LAN, and TCP/IP connections. Internet play is possible if all players have fast connections.

21ST CENTURY FLIGHT

iF-22 has the most plausible flight model of any F-22 game released to date. Speed bleeds under G-loading, available

G-loading decreases as speed drops, and the aircraft can descend in a nose-high attitude at the proper speed and angle of attack (AOA).

The simulated iF-22 will supersonic (achieve supersonic speeds without using afterburners), but not when heavily laden with fuel and ordnance. Performance varies with altitude, although the roll rate remains very fast, even at high altitude. The fly-by-wire flight control system makes the F-22 resistant (but not

immune) to stalls and departures. The pilot-selectable AOA limiter restricts the aircraft to a surprisingly low 12 degrees, but with the limiter disengaged the aircraft can exceed 90 degrees AOA. Pitch control is suspect: It takes rather large stick inputs to make the nose move, and then the nose continues to move after you release the stick, often resulting in pilot-induced oscillations.

After losing an engine, the aircraft tends to roll toward the dead engine. The engines include spooling lag, as evidenced by the RPM gauge taking a second or two to reflect large throttle movements. Unfortunately, there doesn't seem to be any way to engage the afterburners using analog throttle; you must press a key.

For the most part, missile behavior is realistic, although air-to-air missile range doesn't vary with altitude. Guns are difficult to use, primarily because of the game's slow frame rate.

WAS AT WORK.

Computer Living room Home theater Stadium Studio Concert hall

TEETHING PAINS

The product is very stable, but does suffer from some problems. The redout/blackout model needs work. During a redout, only the outside view (not the cockpit avionics) is blocked, though this only occurs when playing on a non-3Dfx-based system. Blackouts develop in sudden spurts, rather than smoothly progressing through tunnel vision to GLOC (G-induced loss of consciousness). Dogfighting is further hampered by the simulated pilot's poor G-tolerance. Any exposure over 9G results in a blackout. Worse, the blackout doesn't immediately clear upon reduction of Gs. Fortunately, the setup options let you disable redouts and blackouts.

iF-22's padlock view is a perfect example of the wrong way to implement a padlock view. The padlock contains numerous "holes," or areas where it is impossible to tell which way you're looking. To resolve this, the HUD display contains a small icon in one of the upper corners that tells you in which direction to fly in order to bring your nose to the target. The icon works, but it's sometimes difficult to see.

Also, you can't padlock a target unless you've first managed a radar lock. You can't padlock an attacking bandit until you've already out-manuevered him. Finally, instead of smoothing panning and tracking the target, the padlock jumps, as if it were automatically switching between fixed views.

The graphics engine, however, caused the most consternation. Using a Pentium Pro 260 and a 4MB 3D Blaster, I found iF-22 to be very slow. Disabling the 3D accelerator support actually improves frame rate and reduces the number of pauses, however, it caused the terrain graphics to pixelate badly at low altitude. Testing iF-22 on two Pentium i66 systems equipped with 3Dfx cards, however, resulted in extremely smooth frame rates in 2D mode on both systems, even at 800x600 resolution. Running on the 3D card resulted in slower performance on both systems, with one system exhibiting extremely jerky frame rates and pauses at points during flight, especially soon after takeoff.

iF-22 has a lot of things going for it, such as the campaign engine, flight

modeling, multiplayer support, and a thorough, well-written manual. Unfortunately, for some players, the frame rate problems render the game annoying at best and downright unplayable at worst. If i-Magic can address the frame rate problems and fix the 3D accelerator stutter, iF-22 could prove to be a standout start for Interactive Magic's simulations division. **B**

APPEAL: Sim players looking for a more serious F-22 simulation than previous efforts; fans of dynamic campaign engines.

PROS: The most plausible F-22 flight model yet; superb dynamic campaign engine; accurate terrain modeling.

CONS: Frame rate problems and frequent pauses on some systems; poor Direct3D implementation; inconsistent graphics quality; jerky padlock view.

War Is Heaven

SSG and Red Orb Team Up for a Fantastic Return to the WARLORDS Universe

by Tim Carter

Tim the Cthulhu enters a dark and mysterious dungeon. He encounters an army of zombie programmers, and is victorious! He finds... a gem. A big fat gem, in fact—one that will keep him happy for, oh, much more time than

he has available.

WARLORDS III, brainchild of the crew at SSG and marketed through Broderbund/Red Orb, is a winner from the minute your fingernails hit the cellophane wrap. Based on one of the few strategy game designs that deserves the accolade "classic," WARLORDS III brings vastly improved depth, replayability, and nuance to an already successful and enjoyable game.

WARLORDS III follows the basic turn-based system of its predecessors for solitary play, but offers simultaneous turns for those with a hankering for multiplayer mayhem with human opponents. It ran smoothly and rapidly on my Pentium 120 and was fully functional in Windows 95.

REIGN OF HEROES

True to the original, gameplay in WARLORDS III revolves around the control of fortified cities. Individual units have a dizzying variety of attributes and abilities, and up to eight units may be grouped to form an army. Heroes may explore ruins for treasure or magical items, perform quests for similar rewards, and bestow a number of important combat bonuses to armies that march under their banner.

The command structure, which was pretty clean in WARLORDS I and II, remains quite impressive. Moving around the game will be simple even for someone unfamiliar with the interface.

WAR IS HELL WARLORDS III is a turn-based fantasy wargame in which combat is resolved on a strategic scale, as in Civ, not in tactical mode, like MOM.

Little, if anything, seemed to have been left out of previous versions, but quite a bit has been added here. For instance, some of your heroes, depending on their class, may now use magic to augment their abilities, which further depend on the race you are playing.

Unlike past versions of WARLORDS, individual cities no longer produce distinct units. Each race now has a pool of set unit types to draw on, consistent with that race's basic characteristics and attitudes. Any given race may have eight regular troop types, three mercenaries, four hero classes, four magical allies, and one boat unit.

The first time I played this system, I felt a tiny twinge of disappointment. The more hunted armies tend to be a bit dull after a while, and battles over castles aren't as massive in proportion. But after only a few games, I could clearly see the wisdom of this design decision. By limiting gamers to a consistent and fixed set of troops, the designers have greatly extended WARLORDS III's replay value. A game on the same map but with a different race is, functionally, an entirely different game. Moreover, within each

game, each of the different races you fight present a somewhat different threat, based on the strengths and weaknesses of their core units.

WARLORDS CUBED

For those who love to mix and match, the scenario setup screen lets you create your own race using any of the preexisting units. You are limited only by the total number of different unit types per race.

The setup screen offers a huge number of other options that build replay value as well—including a prohibition on raising cities (an important issue when playing against human opponents), an option that allows neutral cities to grow in power if attacked, and random placement of starting cities.

In addition to the twelve preset scenarios, the game comes with a random scenario generator and—surprise—an intricate campaign game.

As just one example of the playing value in WARLORDS III, the classic Iluria map from the original game is included as one of the preset scenarios. This map constituted the entire game in WARLORDS

Price: \$49.95

Minimum System

Requirements: Pentium 75, Windows 95, 16MB RAM, 40MB hard-disk space, 4x CD-ROM, 256-color SVGA graphics, Sound Blaster 16 or 100-percent-compatible 16-bit sound card, 28Kbps or faster Internet connection.

Multiplayer Support: Modem, direct connect (2 players), LAN, Internet (2-6 players).

Designer: SSG
Publisher: Red Orb Entertainment
Novato, CA

Reader Service #: 342

HIGHLY TIM Heroes play an important role in *Warlords III*, since they can hunt for treasure, embark on quests, cast spells, and bestow bonuses on your troops.

I, without many of the options and variations available here. Yet, in *Warlords III* it constitutes a tiny fraction of the complete game. Having spent a dozen or so hours on the Illium map already, I can say with some certainty that games will not easily run out of things to do with *Warlords III*.

CALL TO ARMS

What you do in *Warlords III*, of course, is fight. A lot. The core *Warlords* combat system hasn't changed in structure, but a wide range of modifying factors has been added, giving gamers more options when building their armies or taking out the enemy. For instance, individual leaders or units may contribute positive (to your side) or negative (to your opponent's side) modifiers,

while many units also have special attributes or abilities such as assassination attacks, archery attacks, poisoning, and disease.

A major asset of past *Warlords* games was the strength of the AI. *Warlords III* is no slouch in this department, although I found the "Psycho" level somewhat easier than I would have expected for the most

difficult level. While the computer still fails to manage its heroes properly (not picking up treasure lying on the ground when an enemy hero is killed, and ignoring some ruins), it has become much more adept at knocking off your heroes, particularly if you leave them exposed.

I was especially impressed when the AI, during the fifth or sixth scenario of the campaign, made a systematic effort to kill off the heroes I had been carefully nurturing into powerful higher-level paladins and mages. The computer will also raid your home territory frequently and is not averse to scorched-earth tactics if it starts to lose.

According to the manual (generally well done and useful for learning the game and for reference), the diplomatic system has been tweaked considerably

from earlier versions. I must admit that I didn't find much functional difference in the new routines. The computer players tended to fight amongst themselves until I had become the biggest single power on the map, at which point they ganged up on me.

FRIENDS AND FOES

Along with the campaign game, the greatest addition to *Warlords III* is the multiplayer option. Playing via the Internet or a LAN, up to six players can compete in a real-time/simultaneous turns mix. Chasing down enemy heroes and deciding the order in which to move—and saving reserves to react at the last second—are now key decisions when playing against live opponents.

This game has little to drink. If the premise doesn't interest you, you may do better shopping elsewhere, but for fun of fantasy and strategy, or just strategy for that matter, *Warlords III* is a winner from the firstest eleven seats to its Selenite elephant shock cavalry. ☞

FAPPEALS: Anyone who likes strategy games.

PROS: Fun; ultra clean; lots of replay value; great campaign; multiplayer support.

CONS: We're still looking.

Campaigning for Warlords

New to the *Warlords* system, the campaign game strings together a series of scenarios around a plot that has you lead the Selenites against the evil forces of

the undead Lord Bane. Bane has at least one primary ally, and even the powers that are supposedly in your union of good are as likely to send their armies against you as against the principal foe.

The campaign allows you to carry your top heroes and a limited number of magical items from one scenario to the next, which becomes useful as your heroes grow in power. Be careful, though, as the computer becomes

quite adept at picking off unguarded high-level heroes left floating too near the front lines.

After each scenario you get the option of upgrading some

of your own military units. I found this almost as attractive as carrying heroes forward. Being able to give your heavy infantry more movement and a better attack factor constitutes a major bonus over the course of multiple scenarios.

I also found the scenarios in the campaign—which can't be played separately—to be among the more challenging preset games. In many, your enemies get natural advantages from terrain, the placement of neutral cities, or the starting disposition of forces. This makes a nice change of pace from scenarios in which each side starts out equal.

FOR THE SELENITES A welcome addition is the campaign in *Warlords III*, in which you battle the undead forces of Lord Bane.

Damned If You Do

DUNGEON KEEPER: It Brings Bad Things to Life

by Chris Lombardi

The laws of Karma could have predicted this. Since the beginning of gaming, we've played almost exclusively on the side of Good. We've saved untold thousands of lands from the ravages of Evil and sent legions of hellspawn scurrying back to the pit from which they sprang. It was only a matter of time before Black came back with a score to settle.

But who would have guessed that 20 years of goody-two-shoes gaming could be countered by a single game? **DUNGEON KEEPER**, a real-time strategy game from Peter Molyneux and his minions at Bullfrog Software, is evil enough to do exactly that: It's evil not only in its high-level premise—the gamer dons the acid cape of the Dungeon Keeper, a vile lord of an

underground domain who is intent on destroying all that is cute and happy in the world—but also in the details of day-to-day devilry and the dull, workaday elements of rat-bastardy, torture, ritual sacrifice, environmental disaster, cruelty to animals, wanton slaughter, petty meanness, avarice, and hate are all proudly on parade. Consider our karmic debt paid in full, with interest.

As **Dungeon Keeper**, your job is to hew a gloriously hideous dungeon from subterranean rock, attract evil creatures to your palace of pain, and use those creatures to either fight off hordes of looting adventures or destroy a rival dungeon keeper. En route to victory, you must play the control freak of all control freaks, ensuring that your creatures are fed, trained, and paid, dungeon traps are being built and set, spells are being researched, and your own creatures aren't brawling in the barracks. It's like

being runny to a gang of half-ton toddlers with fangs and claws.

IT'S CALLED A PICK-AX, DIG?

The foundation of the game is dungeon design, which plays out like *Sid City in Hell*. From an overhead isometric perspective that can be freely rotated, zoomed, and panned, you map out a floor plan in the virgin rock. Hordes of lumps, the workhorses of your minions, dig out the rock. They also mine gold, fortify walls, and snop up corpses after battles. Should you wish your lumps to work harder, or should you just feel like a nasty SOB, you can reach down with your bile-colored claw/cursor and give 'em lump a good smacking—just one of a dozen twisted, brilliant, and therapeutic design elements.

When the lumps have finished their digging work, it's time to carefully place dungeon rooms for maximum efficiency. There are 14 different room types, which range from the straightforward, functional *Lairs*, *Hatcheries*, and *Training Rooms* to exotic locales such as the *Torture Chamber* (wherein you wrench info from captured enemies and convert them to your cause) and the *Temple* (wherein you can sacrifice creatures in hopes of pleasing the gods). Exactly how these rooms work is, like much else in the game, a mystery. The game's manual is loath to give out the most basic of info, presumably leaving the details to experienced players and Bullfrog's self-published strategy guide.

Unlike the manual, the game itself brims with nuance and

MONSTER MASH Inside that cloud of poison farts and ozone rages a huge battle. The mini-combat status screen at the bottom allows the Keeper to monitor his troops.

PRIZED POSSESSIONS The Keeper greedily surveys his Treasure Room through the eyes of Fig, an eighth-level dragon.

CHOW TIME Creatures chow on chickens in the Hatchery before heading off to bed. The window in the upper-left corner shows the entire dungeon layout.

divinely superfluous detail. For instance, every creature that you attract to your dungeon has its own name and 10 individual statistics, from its kill total to its blood type. None of this info matters in the slightest, but it's cool. And it's clear that cool was the byword of the Bullfrog team.

REALTIME? TRY NO-TIME

The general pace of the gameplay is totally insane. **DUNGEON KEEPER** is similar to other real-time games, but with double or triple the workload. It's like a **RED ALERT** where you not only have to build a tower of Nois, but also have to ensure that the little men in the tower are working efficiently. It's like a **WARCRAFT** where you can direct units to a location, but if one unit gets busy because it's hungry, it starts attacking your troops. It's like a **RED ALERT** where your Harvesters...well, your Imps are exactly like Harvesters: stupid, and requiring constant redirection.

In many of the 20 single-player scenarios, your opponents are towing bands of adventurers who tunnel toward your dungeon. The key here is to choose

when and where you will fight, which is a matter of fortifying your dungeon walls so that the adventurers can't tunnel through. At the same time that you're fortifying, you need to expand your dungeon, which opens up weak points to the adventurers' picks. This dynamic creates a deliciously tense siege mentality.

Attacking a rival Keeper is a different, and somewhat odd, story. Here, it's a war of efficiency and attrition, a matter of sheer numerical supremacy. You must attract and train your creatures faster than your opponent can. When it finally comes down to combat, there's little you can do to help your cause tactically, with

the exception of casting spells, due to one strange element of the design: You can pick up your creatures and plop them down anywhere on the map that your Imps have "claimed." So, anytime you have contact with the enemy, you can instantly drop the entire strength of your army on that spot, at which point a hugely chaotic melee ensues, which often involves 20 or more creatures. The best a Keeper can do is watch an iconic combat dialog, casting a variety of defensive and offensive spells, and pull the wounded out of battle.

Because of this "creature plopping" there's no concept of a surprise attack, flanking, or any other traditional tactical concern in **DUNGEON KEEPER**. Battles are won in the training and recruiting of creatures during the preparation period. In most cases, defeating a rival

Keeper (by destroying his "dungeon heart") is a matter of breaching his walls, plopping creatures in, and winning a massive battle, which gives your Imps time to claim more territory. And then you repeat the process. This, particularly in multiplayer games, can take a long, long time.

As does the game as a whole. Twenty scenarios doesn't sound like much, but it's plenty. The scenarios are nicely paced, starting out with a few excellent

The Eye of the Beholder

DUNGEON KEEPER offers you something you always wished you had in **SuQuik**: the power to come down from your isometric perch and shut around in the world you've created. With the help of the Possess spell, you can drop into the mind of a creature and see your dungeon in all its 3D glory. The 3D engine is no Quake (or even Doom), but the view down there is fascinating because it's yours and it's alive.

In theory, the 3D view is over-kill. While possessing a creature, you have access to the creature's unique perspective and most of its abilities and spells. You can use your creatures to explore, fight, and work, but with the exception of a few special situations, it's almost always more practical to stay in the iso-view and orchestrate the show. But hey, sometimes even a **Dungeon Keeper** has to stop and smell the rolling vicuña.

CLASH OF THE TITANS A first-level dragon and Horrid Reaper get it on. A fly in the foreground thinks twice about jumping in.

tutorials that gradually introduce you to the remarkably easy interface and all the fun toys in the Keeper's toy box. The sense of discovery in the first half-dozen scenarios is truly thrilling.

TOUGH AS HELL

Once you get beyond the tutorials, things get a lot tougher, both because the scenarios are larger in scope and because many of them are designed as puzzles. In some scenarios, for instance, the oval Keeper's dungeon is difficult to reach and requires some tricks to destroy. In many others, powerful creatures are hidden in caves that a Keeper might stumble upon. If he does so too soon, he's finished, and the scenario must be started over with a lesson learned. Puzzle scenarios seem to be a common design technique, particularly in real-time strategy games, both as a way of adding variety to what is fundamentally a grinding war of attrition, and to cover up weaknesses in the computer's intelligence.

These days, multiplayer gaming is the common answer to the AI problem, and it's here that we encounter DUNGEON KEEPER's greatest potential success and failing. Multi-human play with a game as deep and complex as

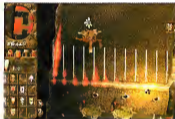

► **RUDE AWAKENING** If adventurers tunnel right into a Lair to take your napping creatures by surprise, you need not worry; you can always plug all your free bad-boys into the moles.

DUNGEON KEEPER promises to be extraordinarily rich and subtle: indeed, after just a few LAN games with some gaming buds, we saw some very clever tactics emerge, which required the development of counter-tactics and counter-counter-tactics—a sure sign of a great multiplayer game.

Unfortunately, the game only supports LAN and modem play, which was the standard—considered progressive, even—three years ago, when Bullfrog began development. But the world has since gone the way of TCP/IP, which isn't supported. Bullfrog has made some noise about a TCP/IP upgrade, but as of press time, there's no sign of it. What's more, the multiplayer play can be very slow, unstable, and has a nasty 5-10 minute resume period. Bullfrog thus faces a double challenge in getting this game on the Net.

But even if they don't, DUNGEON KEEPER will still stand out as a damned fine creation. Its utter uniqueness and sense of style alone are worth the price, especially in these days of recycled inspiration. It's a true gamer's game; tremendously deep, demanding, and open to

► **BEHIND BARS** The Keeper's minions are more complex than the hordes of Warcraft, and some, such as the Horned Rascal, often require "special care."

exploration. Let's just hope that Bullfrog can get this game on the Net, for if they can't, half of this game's potential will be locked away forever in a dungeon few can reach. And that would be the worst of all the evils this game brings to life. ☹

► **APPEAL:** Sociopaths and/or servants of the Dark Lord. Also, strategy fans, particularly fans of realtime, looking for a totally fresh take on the concept.

► **PROS:** The most unique game in years; stylish, multifaceted, and as deep as the pits of Hell.

► **CONS:** Puzzle-oriented scenarios design a turn-off for pure strategists; multiplayer play is currently limited and buggy.

AI OU!

Creating a good AI is notoriously hard in complex, real-time strategy games, and the designers of Duvaton Kirth didn't escape that pitfall. As in Bullfrog's Magic Carpet, the AI here is supposed to be extremely advanced, learning the player's tendencies and adapting its strategy to him, which is an extremely tough thing to verify. It clearly does some things well—note, efficiency-oriented things at which computers excel. But it's weak where AIs are always weak—on the attack and in planning broader strategic goals. This is not to say that DUNGEON KEEPER's AI is especially bad, it's just typically bad.

Little Green Men

The Third X-COM Won't Disappoint the Alien-starved Strategist

by Tim Carter

The little green men are back. Or, at least, they've left the environs of TV and film for the more cerebral terrain of PC strategy games. Specifically, they've returned through X-COM APOCALYPSE, the third in the popular X-COM series. (In case you're wondering, these actually are some little green men in X-COM APOCALYPSE—really, really little, in fact.)

The most striking change in APOCALYPSE is its sharp left turn away from the popular conception of aliens and the alien menace. You won't find any cattle mutilations here—with good reason, as according to the game's plot, Earth doesn't have any cattle left to mutilate.

ALIEN INVASION

X-COM APOCALYPSE posits a futuristic society in which environmental degradation has reduced the population on Earth to a single doomed city run by a variety of corporate and criminal organizations. You, as X-COM commander, are responsible for protecting the city and these organizations from an unknown alien threat originating from a completely different dimension, rather than just from another planet.

This may be disconcerting for some X-COM fans, as one of the most attractive features of previous games was the battle against some of popular culture's favorite bogymen. Unabashedly defending an abstract city with abstract corporate organizations from unrecognizable aliens will be a letdown for die-hard fans.

Personally, I find that the strengths and strategic depth of the game make up for what it lacks in plot. The story isn't as

X-COM CITY Instead of battling aliens for a world, you're fighting for a doomed city, but you'll still need to research tech and fight irritating aliens.

good, but the gameplay remains slick, fast, and fun.

APOCALYPSE contains a strategic game of fiscal management, research, construction, the general uncovering of yet another nefarious plot, and a tactical small-unit combat engine. In this version, three dozen infantrymen operate across either urban areas or crashed UFOs in search of raiding aliens. (For most missions, a dozen is more manageable and adequate.)

While the tactical maps aren't significantly wider than in past games, they have much more depth, reaching up to nine stories high. Most battles take place indoors, and it seems as if the designers

opted to move away from randomized combat locations toward a diverse, but still somewhat limited, set of buildings and UFOs in which to fight. With all the new space, it is almost impossible to cover the entire terrain in a "sweep" format, and gamers will likely find themselves adopting "search and destroy" tactics instead.

Both strategic and tactical interfaces have been given a complete

overhaul, although the new product retains the essential skeleton of the original. With a few exceptions (such as keeping track of which soldiers are based where) the new interface works quite well. Also, it seems relatively stable: In more than 60 hours of play the game crashed on me only four times, although it did slow down considerably during raids on the bigger UFOs, and during some very complicated real-time combat sequences.

BATTLE STATIONS

As rumor and sneak preview have already reported, combat in X-COM can be either turn-based or real-time.

Deciding which system to play is largely a question of personal preference: I found both to work well, although you do tend to trade control (in turn-based mode) for excitement and speed (in real-time).

The aliens are organic in nature. Many crawl or slither, and they need to get close to your squads to do any real damage. Even though your troops are generally in more danger playing in real-time gives them a much better chance of taking

SEEING RED Apocalypse has a different style, with these '50s-style ships, but unfortunately it breaks away from the excellent storyline of X-COM for a strange, new direction.

Price: \$49

Minimum System

Requirements: 486DX/100, DDS 5.0, 8MB RAM (16MB in Windows 95), 20MB hard-disk space, 4x CD-ROM drive, SVGA graphics, Microsoft-compatible mouse, supports most major sound cards.

Reader Service #: 344

out charging brain suckers, hyperworms, and the like, because your squads can fire continuously as the others approach. In turn-based mode, you get one turn worth of fire plus one or two reaction shots, and that's it. If you miss, you're slug bait.

Also, while the AI periodically has its troops doing the "second shuffle," the computer proves a worthy opponent. Well-planned movement and attacks are rewarded with low casualties, while careless advances are sure to be ambushed. Aliens are frequently aggressive, and more than once an alien ambushed out from behind cover, switched to auto, and unloaded on my point man. As the aliens infiltrate potential allies, you must keep collateral damage to a minimum. Dead civilians make enemies very quickly, and alien anthropoids use civilians for cover. Slow those grenades, boys.

Another reason to go realtime is to speed up gameplay in general. As with its predecessors, X-COM APOCALYPSE:

requires players to establish and develop bases within the city, research new technology, and build new teams based on research. You must also handle the city's political issues and keep the aliens from infiltrating key organizations, such as the guys who make your equipment. Money is scarce, and games will find themselves with many financial dilemmas as the game progresses.

As the aliens are very aggressive—even at the medium level of difficulty—you may have to respond to six or seven incursions while you wait for a key technology or funding to appear.

In turn-based mode, each combat could take 1–2 hours, while in realtime they finish in around 20–30 minutes. As

LIGHT BRIGADE Combat, whether it is turn-based or realtime, actually plays very well. All the battles, though, are in bright light, not eerie darkness as in X-COM.

the game's plot developed and I was eager to build new ships, gain new equipment, and carry the fight to the enemy. I gravitated toward real-time combat simply because it offered a quicker resolution.

BELLY OF THE BEAST

Eventually, you must take the battle to the aliens, sending your squads into the alien dimension to stop the extradimensional menace. Unlike the original X-COM, in which the mission to Cydonia was a one-shot attack, the alien dimension here consists of multiple buildings (for want of a better term) and a plethora of hostile forces. One fight through alien airspace should cure all X-COM fans of the "Geez, that ending was easy" blues.

X-COM APOCALYPSE is a well-constructed, enjoyable game. There would be little in the way of criticism regarding the game were it not for the superior flair and overall style of the original game X-COM was a joy to play because of the basic story, which was so compelling. Unfortunately, the same can't be said of X-COM APOCALYPSE's story. But that is APOCALYPSE's only problem, and it's more of a missed opportunity than a genuine flaw. It isn't as good as the original, but it's entertaining and worthy of your time and attention. **B**

FAPEAL: X-COM and realtime fans looking to kick some alien butt.

PROS: A great person-to-person combat engine and many of the gimmicks X-COM aficionados are looking for.

CONS: Plot a major swing away from the original; missing much of the flavor and style of the classic.

Realtime vs Turn-Based

First, a confusion. As an X-COM aficionado and a realtime skeptic, I was ready and willing to dislike the real-time element of APOCALYPSE. Having played it, I have to confess that it is quite fun and speeds up the game, albeit at the expense of your troops, whose lives are in more danger during real-time play (at least with me at the controls).

Fleights are more gripping in realtime, and flanking maneuvers and reinforcement of the point of contact become quite important. Ammunition supply becomes a greater factor when the clock is running, as your troops tend to blaze away quite freely with little regard for their stocks.

On the other hand, managing large numbers of troops in realtime can be difficult. Your squads tend to bunch up when ordered en masse, and don't always watch their backs very well. This is important, because the aliens are quite adept at flanking maneuvers themselves, and seem quite willing to drop down a floor, raise the length of the battlefield and appear via an elevator at your rear—

or even in the middle of your forces, for that matter.

Each mode also requires somewhat different tactics and equipment. I sometimes switch modes to suit the ordinance available to my troops. For instance, my favorite weapon under most circumstances is the Megapol Gas Grenade. This handy device sprays a cloud of knockout gas over a wide area, rendering virtually all humans and most aliens within the cloud unconscious for the duration of the battle.

Early in the game, when your troops are inaccurate and slow, gas grenades are critical to your survival—particularly in turn-based battles where each turn offers only a very limited number of shots to each soldier (but more than enough time to throw two or three grenades). The problem is that only so many grenades come on the market each week. In a busy week, I was usually running out by Wednesday or Thursday. By switching to realtime, where projectile weapons are more effective, I could zap intruding aliens without rest.

The Last Bulge?

SSG and SSI Join Forces for the Best Bulge Ever

by Jim Cobb

Along with Cettysburg, Waterloo, and Stalingrad, the Battle of the Bulge is a very popular, yet difficult, gaming subject. The Bulge presents designers not only with the problems of comparisons with older games and historical accuracy but also with supply problems and traffic jams. Weaving these mundane aspects into an exciting context is a challenge to serious designers. SSC's *THE ARDENNES OFFENSIVE*, the first in a planned series of the *DECISIVE BATTLES OF WWII*, is so good that it may be the last word in operational studies of the Bulge.

The graphics aren't stunning, but the maps fit nicely into the regiment/battalion scale and clearly represent the terrain of Belgium and western Germany. The usual icons for movement and status options exist, as well as a jump map. The regimental units can be deployed with divisional insignias, NATO symbols, or weapon silhouettes.

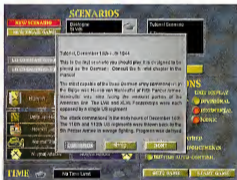

If you're worried that this sounds like another straight boardgame port, just click the right mouse button. Then you'll see the unit's parent organization, its organizational steps, attack and defense strengths per step, supply status, weapons silhouette, and the ever-important operational points (OP). This elegant unit display easily portrays the link between OPs, combat, and supply without the need for constant reference to cumbersome charts and tables. If you've ever wanted to play more serious strategy games, but were thwarted by rules complexity, *THE ARDENNES OFFENSIVE* is a great, accessible place to start.

PERFORM THE OPERATION

Every unit has eight basic OPs, but armor has a higher maximum OP limit than infantry. Maximum OPs can be

gained, even doubled, by the actions of units in supply. However, supply is, in itself, a function of OPs, because a unit must be in supply to receive them. Supply is determined by the number of OPs a unit would expend to reach either a supply dump or a mobile supply source. Thus, OPs create an interlocking relationship with movement and terrain, limiting a unit's latitude of action. Factors such as time also figure into supply (see the sidebar).

The Attack and Defense Combat Capabilities (ADCC) are separate, but still dependent on supply and terrain OPs. A unit expends all ACCs in attack and must be in supply to renew them, although an out-of-supply unit will not lose ACCs until it attacks. As scenarios go on, German supply drops from 100 percent and American supply increases, so ACCs available are a function of overall supply status, and not a constant. A paratrooper unit with a maximum ACC of 12 will

ARMCHAIR GENERAL ACCESSIBLE Better than most tutorials, *Accesses'* covers the exciting opening days of the Bulge and eases you into the action.

TRAFFIC JAMS Here, you get a good look at what the Germans are up against: Despite rapid early gains, they are running out of roads—and time.

Price: \$50.95

Minimum System Requirements: P80, 12MB RAM, 15MB hard-disk space, Windows 95, SVGA graphics, mouse, supports Sound Blaster and compatible sound cards

Multiplayer Support: Network (IPX, Internet TCP/IP, modem, and serial-port direct connect (1-2 players)).

Developer: SSG Simulations, Inc., Sunnyvale, CA (800) 601-7529

www.ssgonline.com

Reader Service #: 345

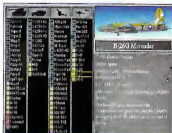

have a replacement of 9 when German supply drops to 75 percent. Through this mixture of OPs, supply, and time, ARDENNES re-creates the German problems of distance and logistics and highlights American transport efficiency.

If you left-click on a stack, you highlight the boxes to which the unit may move, à la PANZER GENERAL. Likewise, if you click on an adjacent enemy unit, you bring up the combat screen. On the right, you view the combat area with all involved units along the top border; on the left, you see attack and defense strengths and bonuses for terrain, entrenchment, and divisional integrity. You receive better odds when you have the tactical advantage, artillery for support, aggressive lead-

enship, or all of them at once.

NO GIMMICK REQUIRED

The OP structure is much more than a gimmick—the ability to move and fight with your units in any sequence makes combat very fluid. Thus, your infantry can make a hole for armor, then your armor overruns weak units, and finally the first units may move again to mop

POLISHED CHROME Whether you're into B-26 bombers or Tiger tanks, you'll find them in the weapons database.

preparing to go over to the defense. Optimizing combat must be balanced against saving ACGs and preparing for follow-up attacks. The AI is good—as we've come to expect from SSG—and unpredictable, which adds a lot to replay value.

ARDENNES has some nice touches unrelated to gameplay, including a selection of unit histories and a robust weapons database. Is the game perfect? No. The most irritating flaws occur in the manual, which does a decent job of teaching mechanics, but is pretty opaque when discussing details of supply and combat. For an operational WWII game, ARDENNES is a bit light on the aspects of command control, which seems to be a design choice to keep things moving along briskly. Lastly, the board-game-style sequence—you go, then I go—does hurt spontaneity. On the other hand, if you're looking for a realistic, challenging, and enjoyable WWII game, don't let these minor flaws slow you down: ARDENNES is the best computer game ever on the Battle of the Bulge. **C**

Supply: Do the Math!

To win ArdenNES you need a thorough understanding of supply and operation points—easier said than done. All units have 8 basic operation points, unless they are surprised Americans, whose infantry can have a maximum 12 OPs and armor a maximum of 24. Basic OPs are constant, but max OPs come from supply and activity, as unused additional points accumulate. To be in supply as the Americans, one of your units must be within 30 OPs of a supply truck, which, in turn, must be within 30 OPs of a supply dump; the Germans are similar, except that they must be within 24 OPs.

Germans begin with 100 percent supply and Americans with less. This relationship reverses as the scenario progresses. The supply percentage affects the amount of points toward the max OP, so infantry with 50 percent supply, for example, adds only two OPs to its basic value.

You don't really have to do the math; just keep in mind that supply is crucial during play, especially during combat. Any of your units that are out of supply after an attack lose their attack capacity. Defense capacity is normal for the first combat of an out-of-supply unit, but results get worse in subsequent attacks. So make sure that last attack works, and don't get isolated!

NO WHY OUT Even if this defender survives the assault, it won't be able to fight its way out. Don't get isolated, and keep reserves handy to rescue units!

up. ARDENNES is a veritable smorgasbord of wargaming: Towns and destroyed units become strongpoints to slow advances, air interdiction and German infiltration teams increase enemy OP costs; artillery units lose effectiveness as the front becomes fluid. For replayability, feel free to try out random reinforcements, different supply levels, and even "loaded" dice.

The scenarios cover all phases of the battle, from actions such as St. Vith and Bastogne to the entire December–January campaign. As the Americans, you must know when to run and delay until reinforcements arrive, while the German player must walk a fine line between grabbing victory hexes and

APPEAL: Anyone interested in World War II or conventional strategy games.

PROS: An elegant system captures all the important aspects of the Battle of the Bulge in an accessible manner, with plenty of great chrome.

CONS: Incomplete, overly complex documentation, light on WWII command and control aspects.

Limited Vision

ENEMY NATIONS Is Just Another Lukewarm Entrant Into the Real-Time Arena

by Martin E. Cirulis

The nice thing about wargames is that for every company that thinks shaker, faster, simpler clones are the road to success, there is a designer somewhere who thinks that complexity and realism are a better route to a good game. In this case, as other companies rush to make more accessible (simpler) versions of *COMMAND & CONQUER*, Windward Studios, in partnership with publisher Head Games, has created its own C&C-forgone title, *ENEMY NATIONS*, which sticks with the ever-popular real-time format, all the while offering a slightly more complex and realistic resource and combat model. Unfortunately, the increase in detail seems to have come at the expense of the game itself.

ANOTHER CROWDED HOUSE

Oddly enough, in the premiere department, *ENEMY NATIONS* bears far less resemblance to C&C than it does to last year's competent sci-fi turn-based wargame, *DIVADLOCK*. Once again, in a very crowded galaxy, the great races of space, human and otherwise, are forced to battle over a viable world through the use of colonizing skills and sheer force of arms. The last and greatest colony was the world as the other races just shuffle off admitting defeat.

While we have seen this game before, especially when you consider the resources model and the dependence on raw materials for construction, it is very nice to see it all in a viable, real-time format. The game starts as your mothership touches down and your initial units roll out. Their number depends on the starting level you pick, but will include at least a con-

struction crane and two hauler trucks. Your ship also carries enough raw materials to get your initial infrastructure established.

While all-purpose construction vehicles are a standard feature in real-time wargames, the hauler trucks are an interesting nod to detail. Whereas most resource games assume that once you cut a tree or dig up a mineral it is whisked away to some convenient central storage area, *EN* makes no such assumption, and thus the trucks are a vital part of your game; they haul resources from harvesting sites to the factories and then to the power plants or refineries, where

they are processed. This makes for a whole new level of tactical decisions concerning the placement of facilities. Plus, for the first time in a game of this type, roads are actually relevant.

The trend toward greater realism does not stop with hauling around various raw materials. Players must also build

TIMBER The level of realism here is fairly extensive; you not only have to harvest different resources, but you also need to ship them to refineries and processing plants.

LAND HO The terrain engine and graphics in *Enemy Nations* are impressive as strategy games go, but they can slow even the fastest systems.

second-level processing plants that turn coal and iron into vital steel, refineries that turn oil into gas for vehicle movement, and power plants that turn coal and oil into precious power. Even more interesting in longer games is the fact that resource sites will eventually play out, forcing players to range farther afield in search of the stuff war machines are made of. All of this gives a level of detail rarely found in the genre.

A STRANGE MYOPIA

Unfortunately, despite their attempts to distinguish themselves, the designers at Windward Studios seem to have taken a strange path in deciding what is and isn't important to this type of game.

For instance, the terrain graphics engine is beautiful to the point of grinting the best computer systems to a halt. In fact, the design notes seem to gloat that it will take the next generation of PCs to fully exploit what the land has to offer. Unfortunately, while

ENEMY NATIONS can easily make it into *Virtual Houses and Gardens*, any gamer expecting the same care and attention to combat effects will be sorely disappointed. In fact, battle sounds and graphics in the game are the weakest I have seen since MicroProse's also-ran, *This Means War*. While some horticulture fans out there may disagree, I suspect most gamers would trade beautifully rendered trees for a bigger sound and graphics difference between cannon and laser fire.

Of course, all this might have been forgivable had the proof been in the actual combat pudding. If the spiffy terrain and wide variety of weapons platforms actually translated into a combat system as detailed and interesting as the resource system, things would have been great—but in the end none of it seems to make much difference.

BUILD IT Information is sparse in *Enemy Nations* and the data is conveyed in near-useless icons. You know what you're building, but not why. Thankfully the manual is crammed with info.

WHAT'S THAT? *Enemy Nations* has various viewing options, a rotating camera and several zoom levels for better views of your clamps.

Combat modifiers for terrain and movement may be at work here, but combat is so icon-bones that the only difference you're likely to notice is that some units crawl along more slowly over hills and forest. This, coupled with a computer player that must have been the dumber brother of the one found in *DeadLOCK*, means that hard-core wargamers (at whom this product seems to be aimed) are sure to turn up their noses.

Even when you focus on the stronger points of the game—the resource and construction portions—the designers seem to have left out a few important details. Despite the fact that everything in the game depends on your supply and demand, there isn't a single spreadsheet to be found. Buildings yield information only in the form of next-to-nothing icons, and the

world map is inadequate to the point of uselessness.

And, sorry, but despite the promising resource and construction angle, I found *ENEMY NATIONS* to be just plain boring. The aliens mess are about as generic as sci-fi gaming gets these days, and the technology research is not much better. Despite coming to this world at FTL speeds, you spend most of the game duplicating the industrial revolution (starships and coal-burning electrical plants?). Moreover, the potential of the high-resolution terrain is wasted, since everything looks as if you've landed on TV's *Earth2* (namely, the planet North California).

This game does have appeal, especially in the multiplayer arena, where human awareness goes far in deepening the shadow ends of this game. But if you are not a connected gamer, you may come away from this game thinking you have paid an awful lot of money for a really good shareware game. Head Games needs a big slap for thinking all a dis-

tributor should do with a game is shove it out on the shelves as cheaply as possible (Holy BC3K, Batman!) Unless you are desperately in need of a deeper real-time wargame fix right now, wait for *ENEMY NATIONS 2*. Perhaps a little more experience will breed greater success. ☹

APPEAL: Fans of real-time who want more complexity in their titles; *RealLock* fans.

PROS: A deeper C&C clone; terrain graphics and the resource/construction engine are some of the most detailed found in the genre yet.

CONS: Inferior combat routines; bad release AI; generic props; a dearth of useful gaming information.

A Splice of Life

Realize Your Dreams on the Big Screen
With *HOLLYWOOD MOGUL* and *DIRECTOR'S CHAIR*

by Terry Coleman

As the dog days of August recede to autumn, we leave behind another barrage of summer blockbuster movies. Admit it: You've always thought that if you were in charge, you could put out better films than the endless sequels and insipid remakes of '70s TV shows that comprise the Hollywood mainstream.

Well, now you have not one, but two opportunities to realize those celluloid dreams. STEVEN SPIELBERG'S *DIRECTOR'S CHAIR* (DC) lets you craft movies in the manner of the famed filmmaker, while in Carey DeMauro's *HOLLYWOOD MOGUL*, you play Executive Producer, running an entire film studio.

REALIZING YOUR VISION

Both games are light on traditional documentation but replete with online help. While both games are accessible, DC is obviously aimed at people who don't normally play games. There's nothing wrong with that, and DC does begin nicely. The feeling that you get when Steven Spielberg walks on screen and talks to you is as warm and fuzzy as watching the video of ET. It's a little sappy,

well, the same complaint has often been leveled at many of Spielberg's films.

MOGUL lacks the multimedia splendor of DC, jostling its text-heavy screens with colorful static backgrounds. There are some similarities, in that both DC and *MOGUL* utilize an attractive assistant to keep you informed and, it's hoped, out of trouble. But even here, the differences abound. DC gives you singular choices. Every game features the same assistant, the same production studio. *MOGUL* not only lets you select your assistant, choose from a number of studio-fairies, WWW files, and design your own studio logo, it also lets you import BMP files so that your girlfriend, husband, or grandmother can be in the game.

DC concerns itself with the nuts and bolts of filmmaking, while *MOGUL* gives you the big picture. Each concept is a solid one for a game, but the games differ greatly in how they realize their potential. In DC, you are actually on the set shooting scenes and dealing directly with actors. As director, you aren't allowed to choose your actors—you don't yet command Spielberg's clout. But this also cuts down on your gameplay choices, especially since the acting quality is so uneven.

Jennifer Aniston (from the hit TV show *Friends*) is very photogenic, and delivers about what you'd expect. But why Quentin Tarantino was chosen as one of the "actors" for this game is a mystery, one that ranks right up there with the miscasting of Bruce Willis in *Boulevard of the Dreams*. A superb writer and promising director, Tarantino's idiosyncratic style

DIRECTOR'S CHAIR

▶APPEAL: For die-hard Spielberg fans only.

▶PROS: Lush production values; warm and friendly Spielberg; Jennifer Aniston.

▶CONS: So limited and linear that it ultimately feels as both game and multimedia.

▶FATHER FIGURE Following in Steven Spielberg's footsteps is fine to a point, but it's so overdone that *Director's Chair* suffers as a game.

Price: \$39.95

Reader Service #: 348

D: In *Director's Chair*, you film Quentin Tarantino, who has already been chosen for you.

B: In *Hollywood Mogul*, you negotiate to choose your own actors and haggle over what perks they will receive.

C: *Director's Chair* hands you a completed script, and you have

only a little leeway in modifying it.

B: *Hollywood Mogul* lets you decide which scripts to buy and you select writers to polish and rewrite them before any talent is hired.

E & F: After a film is completed, both *DC* and *Mogul* let you see your name in the credits at the local cinema.

rarely comes across properly in his acting—the same is true in *DC*. At times, he's downright painful to watch.

YOU MAKE THE CALL

In *Mogul*, you do everything from buying the script and selecting the location of the film shoot, to choosing the actors, the producer, and the director. And while this process lacks *DC*'s visceral appeal (such as Ms. Arlston's sunbathing), *Mogul* puts you right in the middle of the moviemaking game. You may, for example, negotiate with a certain former Austrian bodybuilder to determine whether or not he has casting approval, how many stunts he will personally perform, and if he will be settle for limo service to and from the set or require a 24-hour chauffeur. About the only thing missing is having to remove brown M&Ms from the bowl.

Every actor, producer, and director in *Mogul* is rated for a variety of tendencies: star appeal, ego, ability to stay within budget, work ethic, and artistic vision. The best are, of course, the most expensive. From the time the negotiations begin, you have to juggle a lot of factors before your movie can become a hit.

HOLLYWOOD MOGUL

APPEAL: For anyone who's ever wanted to produce films.

PROS: Clever and unique strategy game; very challenging; ability to edit nearly every game attribute is a nice touch.

CONS: Minimalist production values; no multiplayer mode.

• Should I go for a veteran actor no longer at the top of the box-office heap, hoping that he or she has one more blockbuster left?

• If I spend \$30 million on special effects, does my sci-fi movie really need big-name actors?

• How can I keep my tempestuous star from throwing temper tantrums and costing us millions in delays?

Afterward, you have to choose advertising budgets, set up test screenings, and decide how many theater screens will show your film. You can't rest on your laurels, either. If you want to have a successful studio, you have to keep cranking out the hits. None of this is difficult, but it results in plenty of gameplay decisions, making *Mogul* a lot more addictive than the average strategy game.

FILM BREAK

DC, on the other hand, tries too hard to be accessible, telling you where to go, what to do, and when to do it. When it

could challenge you with tough decisions, it irritates you instead. For example, when you are ready to shoot your first scene of the day, you are told that everyone partied too late last night, and the actors haven't even shown up for makeup yet. C'mon, guys, even *CCW* editors are ready to go before mid-afternoon!

Some of *DC*'s sequences are interesting. But when you edit film or choose which camera angle to use, you are limited to the decisions Spielberg would make; there are only so many PMV sequences you can include on CD-ROM. So, forget about doing any cool Alfred Hitchcock-style pans. The feeling is roughly equivalent to looking for the hot spots in a linear adventure game; if you're into that at the expense of more rewarding gameplay, you might have some fun.

And whatever pretensions movies might have to being art, they are certainly about having fun—and about storytelling. *Mogul* is way out in front of *DC* on both counts, because it makes you believe that

MODIFYING MOGUL *Hollywood Mogul* lets you modify everything: your studio facade, your assistant, even the music that plays over the credits.

you really are a hotshot Hollywood executive making multimillion-dollar decisions. *DC*, for all its flash, never really puts you inside the head of a big-time director, and it's often tedious to boot. From Spielberg, who crafts timeless films—and who also loves to play computer games—we deserve better. So, whether you're a movie buff, or just want a different, clever strategy game, pass on the fluff of *DIRECTOR'S CHAIR* and buy a ticket to *HOLLYWOOD MOGUL*—one of the true sleepers of this gaming year. ☞

IMPERIA

THE FINE ART OF CONQUERING THE WORLD

It's one thing to create a working civilization, quite another to lead that civilization to world dominance. IMPERIALISM™ inspires you to do both. Combining elements of resource

management, economic trade, exploration, diplomatic maneuvering and military conquest, this multi-faceted strategy game allows you to attempt what few in history have dared: *unify the world under one leader!*

To achieve victory you must develop your country's infrastructure through deft manipulation of delicate economic, diplomatic and military resources. Then, skillfully maneuver it to a position of dominance in the Council of Governors.

Easy to say. Difficult to accomplish.

Your Cabinet Ministers will, of course, offer varying amounts of advice.

IMPERIALISM™

But ultimate control over the fate of your nation is yours and yours alone. However you handle it, the vigorous climb to the top of this earth-like world is a challenge with no equal!

IMPERIALISM.

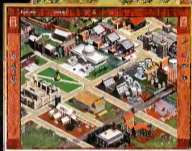

The World is Within Your Grasp.

CIRCLE READER SERVICE #124

Hero: Miyamoto

A Tribute to One of the Greatest Game Designers of All Time

This month, **README** features a list of CCW and Gamespot's Most Influential Game Designers of all time. As our staffs mulled

over the list, I brought up the name of a man who has never designed a single PC game: Shigeru Miyamoto. Many of you won't know him, but he is Japan's greatest game designer and Nintendo's ace in the hole in the next-generation-console battle. He probably is the world's best-selling game designer, with literally dozens of games to his credit and combined sales that total more than 100 million units. The reason you don't know him is that as Nintendo's premier designer, he designs console games only

CONSOLES VS. COMPUTERS

Now, before you old-timers get in an uproar and turn the page, consider this: PC games don't exist in a vacuum, and many PC developers play and love console games. James Phinney, one of StarCraft's designers, says, "At Blizzard, console games and arcade games have a big impact on what we think is cool. I've always thought of that as one of our strengths."

It's no coincidence that the best game designers on the PC have all played video games, especially Shigeru Miyamoto classics such as *MARIO 64*, *LEGEND OF ZELDA*, *SUPER MARIO BROTHERS*, and *DONKEY KONG*. For someone who has yet to design for the PC, Miyamoto has influenced the PC industry as few other designers have.

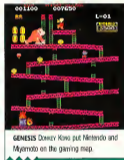

A GORILLA NAMED DONKEY KONG

Miyamoto's first game was *DONKEY KONG*, which was released in 1981, at a time when video games were primitive. In games like *ASTEROIDS* and *SPACE INVADERS*, you simply shot at an ever-increasing number of aliens on a never-changing screen. *DONKEY KONG*, though, created a quiet revolution in the arcades because it gave you a human persona (a plumber named Mario), a leering adversary (Donkey Kong), and a goal (the rescue of your girlfriend).

DONKEY KONG also employed the concept of levels. Once you defeated one level, you moved onto a totally new arena of challenges. The challenges weren't shooting and killing, either, but defensive skills like jumping and dodging. Both Mario and Donkey Kong also had personality: Mario in the way he ran and jumped, and Donkey Kong in his chest-pounding tantrums. It all seems unremarkable now, but in 1981, it was amazing.

The effect on today's designers, who were then just kids or teens in the arcades, is telling. Jordan Mechner—the designer of *KARATEKA* (1984), *PRINCE OF PERSIA*

(1989), and *LAST EXPRESS*—didn't play a *MARIO* game until *MARIO 64*; nevertheless, he credits Miyamoto with inspiration. "Both [*KARATEKA* and *PRINCE OF PERSIA*] relied on a rescue-the-princess storyline, and *DONKEY KONG* was the first game that had the princess theme," Mechner says that he pumped countless quarters into *DONKEY KONG*, and that his dreams for

years" was to create a computer game as good as an arcade game."

Miyamoto's early work influenced even the strategy side of PC game design. Brian Reynolds, the designer of *CIVILIZATION II*, says, "The *MARIO* games are impressive in their game for their depth of play and elegance of their system. I grew up playing games like *DONKEY KONG*. Part of the culture of writing games is remembering classics like that."

THE REST IS HISTORY

Four years after *DONKEY KONG* appeared, Miyamoto took his plumber and created the 8-bit Nintendo flagship game, *SUPER*

ITS-A ME, MARIO Mario's visage can inspire loathing in some PC enthusiasts, but not the open-minded game designers who try to emulate Miyamoto's innate sense of what is fun.

“Shigeru Miyamoto is the one person who could be considered a God of Game Design.”

—Tom Holl, cofounder of id Software and ION Storm

MARIO BROTHERS. You all know it as the MARIO platformer. This was in 1985, before PRINCE OF PESSIA, before LOOT, RINNER, before THUNDER. Every side-scroller created since then owes something to Miyamoto's SUPER MARIO BROTHERS or DONKEY KONG.

SHIGERU MIYAMOTO

The rest is gaming history. Miyamoto soon designed the action RPG LEGEND OF ZELDA, which is still remembered as one of the greatest console RPGs ever. ZELDA also inspired Crystal Dynamics' soon-to-be-released RPG, BLOOD OATH: LEGACY OF KAIN. Miyamoto has also created racing games like F-ZERO (a precursor to the PlayStation hit WIPACOUT) and the space combat shooter STAR FOX. And he continues to produce such breathtaking titles as SUPER MARIO 64 and STAR FOX 64.

Tom Hall, who helped create COMMANDER KEEN and DOOM when he was a kid, and is now designing the RPG ANARCHONEX at ION Storm, says "Shigeru Miyamoto is the one person who could be considered a God of Game Design. He has a complete and utter grasp of exactly what is 'fun.' He invented the side-scrolling platform game. How amazing is that? How seminal a game could SUPER MARIO 64 be? His approach to design, with your constant learning as you go, keeps the experience fresh throughout the game. It's not just more levels—it's whole new experiences that you are introduced to, new ways of doing things, which are then incorporated with your previous knowledge in a kinetic, exciting combination." As for personal influence, Hall says,

"He definitely has influenced my games from the start—COMMANDER KEEN was Miyamoto-meets-Chuck Jones. He has been so pervasive an influence and introduced such basic things to all of game design, it's a wonder we're not all paying him royalties!"

Hall's colleague, John Romero, co-designer of WOLF3D, DOOM, and QUAKE, is naming the main character in his upcoming game, DARKSTANA, Hino Miyamoto, in honor of the man he credits as one of the most influential game designers of all time.

MARIO'S LEGACY

Today, Shigeru Miyamoto oversees game design among the various designers at Nintendo. His newest Nintendo 64 game, STAR FOX 64, is one game in which he took an active design role. The result is an amazing blend of ever-increasing action, cinema and drama, and personality—all hallmarks of a Miyamoto design. In STAR FOX 64, you must battle through six worlds to defeat a final boss on the planet Venom, but you have to choose from 15 total worlds to get to that goal. How's that for replayability?

STAR FOX 64 also has a cinematic quality that rivals that of the WING

COMMANDERS. As I played, I felt as if I were part of a movie due to the constant chatter between my wingmen, the seamless cut-scenes composed with the same combat engine, and the incredible pacing of the action.

As for personality, STAR FOX 64 and MARIO 64 brim with it. The way the characters move and talk, combined with their attitudes, makes the game so three-dimensional that you really believe these are characters from an alternate world inside your N64.

The ability to imbue works with these qualities and make them something more than mere video games is what many designers, on both the PC and console side, still strive for. Even when developers don't directly emulate Miyamoto's design, they sometimes use his games as a benchmark for their own design. Frederick Reynold (creator of ALONE IN THE DARK) didn't intentionally put elements of ZELDA and MARIO 64 in TWISTED'S ODYSSEY, but the similarities began to manifest themselves. "We felt like 'OK, we're on the right track,' because Miyamoto did similar things," he says.

Undoubtedly, Miyamoto has been influenced by other designers. I've told him plays PC games quite a bit, though his biggest inspiration is the gamer. My colleagues at EGM tell me that Miyamoto often says, "When I'm designing a game, I think only of the gamer."

Miyamoto's games are every bit as influential today as they were 15 years ago. He still has a lot of magic to impart on the gaming world, and with luck, we'll see more of it from him and from designers who continue to be inspired by his work. Tom Hall sums it up best: "Everyone has played Miyamoto games. His games are ubiquitous and wonderful, and I wish he'd clone himself so we could have even more. He's the single most influential game designer on this planet."

Special thanks to Electronic Gaming Monthly and Video Gamespot for background information and artwork.

THE GAMING FOX Star Fox 64 illustrates the magic Miyamoto touch. With branching gameplay, drama, and personality, it isn't just a fantastic game, it's an experience.

INCUBATION

TIME IS RUNNING OUT

A COMBINATION OF GRAPHICS AND GAMEPLAY LIKE YOU'VE NEVER SEEN BEFORE!

While gamers are drowning in a sea of real-time strategy clones, Blue Byte Software is offering a breath of fresh air with a unique new game — *Incubation: Time is Running Out*. It's an exciting and novel treatment of the classic turn-based strategy game that's sure to be a hit, because it's both original and a blast to play.

Incubation is the latest chapter in Blue Byte's successful *Battle Isle* saga. You must lead a squad of marines against the aggressive man-eating Scay'Ger on the planet Scarya. The missions in *Incubation* are quite different from those found in the traditional hex-based games. The battles are not fought in large open fields, but rather in the dark and complex industrial buildings of the colony Scay-Hallwa.

You'll need to rely on your tactical skills rather than strategic planning, as the fast paced action produces constantly changing conditions. For example: during a battle Scay'Ger might start dropping down from the ceiling, jumping out from behind closed doors or even coming up through the floor! In the specially designed multi-player levels, death-matches against up to three other squads can be fought over the Internet, a LAN or via a play-by-mail system.

Snap decisions are easily put into action with the intuitive user interface. The interface allows you to stay focused on the task at hand instead of digging through the manual in the middle of a fight. Watch your orders being carried-out from almost anywhere you can imagine with a free-floating mouse-controlled camera.

Enjoy amazing real-time 3D animation powered by the technologically advanced Charisma graphics engine!

View the hot action from any angle through a user-controlled camera with complete freedom!

The wonderfully detailed 3D environment of *Incubation* is refreshingly different from the rather dull, flat terrain of other strategy games. Using the *Extreme Assault* 3D engine, the events in the game and actions of the characters are all fully animated giving them lifelike appearances and mannerisms.

After experiencing *Incubation's* fascinating gameplay and beautiful 3D graphics, I imagine we will see a mass of *Incubation* clones in a year or so. My advice: Get the original; it's always better.

Links LS

1998 Edition

THE **ART** *and the* **SCIENCE of** **GOLF**

Introducing the Links LS 1998 Edition. The forces of art and science have combined to produce a golf experience like never before. This new version of the Codie Award winning golf simulation is packed with over 25 new features! Here's just a few:

Brace yourself for lightning-fast redraws, min view in a window capability, and up to 8 additional "smart" camera views.

Our course designers have given even more attention to detail including new water reflections, improved textures and enhanced sky backgrounds.

Notice the new waving flags, birds, airplanes and other background animators with up to 8 of your friends over expanded Internet play!

Making It to the Show

CGW's Roving Sports Columnist Checks Out the Action at E3

The sheer magnitude of E3 can be staggering to the uninitiated (like me). This year's show in Atlanta filled the Georgia Convention Center, the Georgia Dome, and the Inforum. Of course, everybody who's anybody in sports gaming was there, puffing about their latest creations, sometimes behind closed doors for

competitive reasons. Don't worry, though: CGW penetrated E3's veil of secrecy to bring you all the buzz about what to expect in sports gaming over the next few months.

BACK TO THE FUTURE

Accolade privately screened an alpha version of *LEGENDS FOOTBALL '98* that looked very hot. Although the player AI had not been fully worked out, the game engine was smooth, and *LEGENDS'* time warp concept, which allows you to pit teams from different eras (1932, 1950, 1968, 1997) against each other, was just plain cool. For example, when a modern team plays against an old-time club using 1932 rules, the roster cannot exceed 20 players. Forget the rampant specialization that's so prevalent in today's NFL. Pit Brett Favre's Super

Bowl crew against the 1932 Packers, and you're liable to find the MVP QB puffing double-duty as a linebacker. *LEGENDS* takes rules changes into account as well. There were no hash marks in '32, so if you're tackled near the sideline, that's where the ball is spotted for the next play, forcing you to use an unbalanced line. Your tight end may even wind up snapping the ball! See the *Sneak Preview* elsewhere in this issue for more on this promising release.

Adding an air of mystery to the proceedings, EA Sports had a pair of golf-balls in Bertha Brothers suits providing

the most exciting feature of *NCMA* is the need to recruit new players as graduating seniors move on. EA also demoed *ANDRETTI RACING*, a Win 95 release slated for this fall.

MADDEN ABOUT YOU

Of all the sports titles I saw at E3, however, it was *MADDEN 98* that blew me away. EA is moving *MADDEN* into sim territory, with more than 100 team and individual stats included. Designer Ric Neil pointed to improvements in AI, enhanced player animations, Net multiplayer, and an expanded playbook as features

that will help *MADDEN* challenge Sierra's *FOOT FRONT* line for the interest of the serious football gamer. A neat feature was the ability to employ a quarterback's peripheral vision to scan whether the defense was in zone or man coverage at the line of scrimmage.

Madden University has also been upgraded from last year's "This is a football!" simplicity into a more advanced tutorial that links to the play editor so gamers can learn formations and tweak plays. Play creation has been simplified with the addition of lines that show defenders' keys in given alignments. Although it won't happen this time around, Neil would like to add a career mode to *MADDEN*, perhaps even linking it to the *NCMA* game for a draft. Now that would be cool.

ABC Interactive will be back with *MONDAY NIGHT FOOTBALL*, as well as

BUT SERIOUSLY FOLKS EA Sports is looking to win the respect of the more serious football gamer this season with a more accurate statistical model and a play editor.

security at their display on the show floor. A stretch HumVee limo painted in white, red, and blue served as an eye-catching centerpiece. Inside the Hummer, VIPs received secret briefings on *MADDEN 98* and *NHL 98*. In the public display area, EA was showing *NCMA FOOTBALL 98*, which uses a completely new graphics engine. Perhaps

ICE CAPEDES NHL Powerplay was one of the surprise hits of last year's sports scene, and this year's model, with full-3D polygonal players, should heat up the war with NHL 98.

HEROES OF THE GRIDIRON, their college football sim that vapor-locked in 1996. Both games use the MNF engine, which appears to have been enhanced over last year's debut. If ABC can add improved AI to the best play-design interface in the business, these titles could be huge. Their excellent online support will be back, helping gamers find each other for matchups. ABC is also considering adding drafting and league elements to their Web site.

Princes will appeal to gridiron fans for its use of college all-time teams. Penn State fans, for example, could pair '70s horse John Cappelletti in a backfield with '90s guy Ke-Jana Carter. The MNF engine has also added local two-player action, and I had a chance to watch as Bob Griese and Lynn Swann demold this feature in a Dolphins-Stedens gaudy match that had all the excitement of one of those mid-'70s playoff tilts. Later, I even collected an autograph from the Hall-of-Famers. "Can you make that to my, uh, cousin? His name's Dennis, too. Really?"

NEWS WORTHY

Over at Sierra's massive setup in the Inform, **FRONT FOOT** producer Kate Kloos walked me through this year's lineup. It's no secret that FPS: FOOTBALL will get only a minor facelift for '98, as the company retools for a complete football overhaul in the '99 edition. With not much pigskin news, Kloos showed me an early version of FPS: SKI RACING, due for release this fall, which we previewed in our August issue. The physics-based sim offers five different types of races on six world-class ski resorts. Multiplayer options include modem, LAN, and Internet play, and SKI RACING supports 3Dfx and Rendition acceleration.

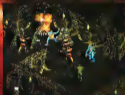

Sierra was also excited about FPS: TROPHY FISHING, a fishing sim based on the TROPHY BASS 2 engine that allows fly fishermen and spincasters to drop their lures in the water. One of the coolest features of this game was its support for Microsoft's upcoming Sidewinder Pro Force Feedback joystick. This stick was very much in evidence at E3, and from what I saw (and felt) it could

be a major hit. The tug of a fish on your line in THORIN RIVERS was dead-on.

Speaking of Sierra, one question I'm often asked by gamers is "Will we ever see FPS: BASKETBALL?" As I indicated a few issues back, the answer is yes, it will appear sometime in 1998. A second source at Sierra confirmed this for me at E3, noting that the game company and the NBA were in negotiations that very week. Interestingly enough, the game might not come from Dynamix, which has done the entire FRONT PAGE SPORTS line up until now.

BOTTOM OF THE NINTH

Not all of the news at E3 was as good. Accolade considered that the hotly anticipated HOUARELL 6 was behind schedule and might not ship until next spring. In other baseball sims, MINI showed a near-final version of MICROLEAGUE BASEBALL 6.0. It had the unmistakable look of a Dave Holt design, and in fact uses the stat model from PRO LEAGUE BASEBALL 97. The DOS-based sim will be Net-playable on Kali, and features good-looking rendered stadiums, motion-captured player animations, and variable camera angles.

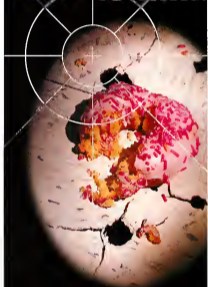

BERRY BERRY GOOD Microsoft's *Baseball 3D* features some truly jaw-dropping 3D graphics. However, you'll need an accelerator card to play.

Microsoft, jumping into gaming with both of Bill Gates' billion-dollar feet, presented its upcoming *Baseball 3D*, the first sports title that will require a 3D accelerator for play. The version I saw at E3 looked great and had some cool features, including actual scans of players' faces attached to the animations. And could there be any truth to the E3 rumor that Microsoft will be marketing its own accelerator card when *Baseball 3D* ships?

Hockey fans can get ready to drop their gloves over *NHL 98* and *PowerUp 98*, both of which were being previewed in Atlanta. The pre-alpha *NHL 98* had graphics to die for, but I couldn't get hands-on time to play it myself. Meanwhile, *PowerUp 98* was being screened under Virgin's invitation-only tent, and looked much improved over last year's debut. Look for it to give EA a real skate for its money. **B**

give it

The Real Thing

PC Pilots Test Their Mettle in Sky Warriors

“Sky Warriors is an experience you’ll never forget, probably the closest a civilian can get to air combat.”

You’re an expert sim pilot. As flight simulations have grown more sophisticated, so have your piloting skills. You’re just waiting for the day when you’re sitting in the cattle class of a United 737 and the flight attendant comes on the intercom and asks if there’s anyone back there who can fly the plane. Finally, your chance to show off your skills!

Of course, there are easier ways to try your hand at the real thing. Many local airport FBOs offer introductory flights for only \$35, where you can spend a half-hour or more at the controls of a small plane and get a taste of flying. Check out www.bepilot.com for more information and a list of FBOs near you. If you’ve never flown in a small plane, even a relatively staid ride in a Cessna 152 should prove exciting.

But if you want to dive in headfirst, you can skip the basics and go straight to the air combat. A number of journalists get a chance to do just that at

A few years back, Electronic Arts released *SINCE TEAM*, a squad-level combat game based on jungle warfare in Southeast Asia that was so realistic it had to be categorized as a “soldier simulation.” Now Jane’s Combat Simulations is thinking of doing a modern-technology sequel. Interested gamers can send suggestions on what they’d like to see in a modern version to jhanne@ea.com.

EXPERT ADVICE Denny shakes hands with Ed “Rolo” Britkus after their successful sortie. Rolo is qualified in the T-34, T-33, F-88D, F-102, and F-105

Atlanta-based Sky Warriors (www.sky-warriors.com) during June’s E3 show. Microsoft invited dozens of journalists to try its upcoming multiplayer FIGHTER ACE sim (www.xzone.com) by participating in a tournament in which the best pilots in the virtual skies would get an opportunity to try their hands at combat in the real skies. When all was said and done, three of the top four slots had gone to CGW sim writers, with Tom “Thunk” Boshart in first place, Robin “Sandman” Kim in second, and yours truly, Denny “Mitty” Atkins, in fourth. We’d proven we were experts in the simulations realm, but how would we fare at the real thing?

BRIEFING

We arrived bright and early for our preflight briefing. Our sortie would involve three T-34A Mentor trainers. Thunk had flown the day before, so Sandman and I were joined by Robert “Wings” MacKay of MicroWings. (If you have any interest in civilian sims, be sure to check out this useful

organization at www.microwings.com.) Our backup as safety pilots, who would take off, land, offer advice, and keep us from doing anything stupid, were Mike “Fins” Flaley, an A-40 veteran who flew over Iraq after Desert Storm, Steve “Chopper” Hymas, whose 22,000+ flying hours included time in planes ranging from the F-89J to the F-102 to the C130; and Ed “Rolo” Britkus, with over 18,000 flying hours in craft ranging from the F-85D to the F-106.

The experience of veteran pilots like Rolo, who had flown low escort for U-2 spy planes during the Cuban missile crisis, built confidence in the safety of the Sky Warriors experience. In addition to being briefed on how to handle the aircraft, we were also issued parachutes and versed in basic bailout procedures. This far, the Sky Warriors aircraft have performed an equal number of takeoffs and landings; the parachutes, happily, have yet to be needed.

First led our combat briefing. Never mind our sim-based knowledge of

ON THE RADAR

Sim vs. Reality

Sky Warriors Brings an Ace PC Pilot Down to Earth

I have been an avid flight simulator for more than 10 years, but until *Sky Warriors* I had never even been inside the cockpit of a real airplane. Despite this total lack of real-world experience, I was fairly confident I would know exactly what I was doing once I took the controls.

Further, I actually harbored fantasies of progressing so rapidly through the exercises that I would be able to move onto scenarios normally reserved for subsequent sessions. To say that my extreme excitement had clouded my judgment would be a laughable understatement.

In the end, after both the T-34 and my high-flying expectations were brought safely back down to earth, I had accomplished no more than any typical *Sky Warriors* fast-broker. Fortunately, this did not stop me from having far more fun than I'd thought possible and, in the process, gaining some insights into the similarities and differences between PC flight simulations and real-world flying.

CONTROL COMPLEX

Although the feel and placement of the flight controls in the Mentor do not match my PC's peripherals, I quickly adapted to them because I knew how they worked. Sims like *Air Warrior* and *Flucht Unlimited* had taught me how to finesse the stick, so straight and level formation flying was a snap.

Maintaining position during a bank proved tougher, but was nonetheless manageable (after a few false starts) once I got a handle on the stick's feedback and its greater sensitivity in pitch than in roll.

Only in hindsight did I realize how close to my expectations the T-34's

"flight model" really was. It exhibited the same fluid, well-damped feel I look for in a good PC sim. Even the accelerated stall I accidentally entered while pulling hard for a shot at Denny played out just as I would have expected. My turn rate suddenly dropped to zero as the plane started shaking, but picked up right where it left off once I eased off the stick enough to recover. It was a heartening vindication that the standards I use for judging flight models—which were previously based only on sim experience, readings, films, and talks with pilots—jibed reasonably well with reality.

MIND OVER BODY

Once we got into the mock dogfights, my mind felt right at home, while my body struggled to keep up. As considerations of relative energy states, positional advantage, and lead/lag/pure pursuit curves bounced around in my brain—

“Once we got into the mock dogfights, my mind felt right at home, while my body struggled to keep up.”

ENTER SANDMAN Robin "Sandman" Kim checks out the hardware for the most realistic sim he's ever flown.

exactly as if I were playing a WWII flight sim—the rest of me was deluged with unfamiliar stimuli. Actually feeling the hand rolls and Gs was an awesome experience. I was able to avoid blacking out or getting tunnel vision under heavy loads by tensing my leg and abdominal muscles—practicing this while driving my car the week before no longer seemed so silly. Alas, the protestations of my stomach under negative Gs had no corresponding remedy. I will never look at “eggheads” in flight sims the same way again!

While the tactics I picked up playing air-combat sims served me well overall, my sim-flying

perfect shot lineup. Clipper kept telling me when to start the roll, but I often waited a bit longer, thinking I knew better than the guy in back who had tens of thousands of flight hours under his belt. Eventually, I learned better. He also identified a flaw in my fighting style that had always plagued me in sim combat: I tend to fly aggressively toward the bandit when I should head for a superior lag position at “the elbow” (directly behind the bandit and within weapons range).

SITUATIONAL AWARENESS

The most surprising thing to me about dogfighting in a real plane was how easy it was to tell what was going on. I always knew exactly which way I was looking, based on head orientation and peripheral vision, and had a better feel for distances, closure rates, and aspect angles than in any sim I have played. Visibility down past the side of the nose during I High Yo-Yos was excellent, about on par with *Warbirds*, and superior to most jet sims with their screen-hogging instrument panels. Also, by simply leaning forward a few inches and twisting, I could easily look directly behind me, even with a

five-point harness on. Looking around did get more difficult when loading up the Gs in a tight turn, but then my neck muscles could be stronger.

Slay *Warbirds* was an experience I will never forget. As a flight-sim junkie, I was able to take away from it not only some priceless memories, but a new-found appreciation for just how realistic sims have become. And they will only get better.

How Real Can You Get?

After you finally get a taste of visual range dogfighting and examine how it compares to sims, an obvious question arises: How realistic can PC air-combat sims ultimately become? Flight and systems modeling clearly have the potential to be 100 percent accurate someday, and the feel conveyed by a good force feedback joystick, throttle, and rudder pedal combination can bring you surprisingly close to the real thing. “Seat of the pants” inputs, however, are impossible to simulate on a simple PC. Flying a sim is harder than it should be without this source of information, but most sim pilots eventually learn to use visual cues as substitutes for these physical stimuli. I believe the limits of proficiency for this can approach reality, but only if sim designers help gamers make this transition by providing easy access to key data such as airspeed and aircraft attitude.

The biggest disadvantage of PC flight sims is the comparatively poor situational awareness they provide with their cockpit view systems. SVGA-graphics resolutions degrade visual acuity and peripheral vision, and cost-effective VR headsets are not yet available to do proper head tracking. It’s currently impossible to give the kind of situational awareness you get in a real cockpit.

Sim designers (and gamers) seem divided into two camps along a familiar line: form versus function. Those who emphasize a realistic look tend to rely on “virtual cockpit” panning views, while those who focus on giving the gamer a realistic amount of information are willing to accept a more artificial appearance, such as in *Am Warbird*’s large set of overlapping, wide-angle fixed views (shamelessly duplicated in *Warbirds*, *Formix Squadron*, and *Jave’s F-15*).

The hope is that one day, increasing screen resolutions and continued innovation will bring the two sides together in a system that not only looks real, but also provides a realistic field of view, well-defined images that indicate target facing and closure rates at realistic distances, a means to communicate precisely in which direction you’re looking, and a simple and intuitive way to search for and track targets.

BRIEF INTERLUDE Veteran A-10 pilot Mike “Fins” Finley briefs us on lag pursuit.

experience did hinder me in a couple of ways. First, I initially had a tendency to focus too much on my instruments (even when I had a bandit on my tail) since I rely so heavily on them in sims. Steve “Clipper” Haras, the pilot in the backseat, reminded me repeatedly to keep my head out of the cockpit. Second, I frequently underestimated the inertia of the plane in turns, causing me to roll out a few degrees beyond a

100 *Continued from pg 208*

Innocent as Split-Ss, and other maneuvers. We were going to start with the basics—High Yo-Yos, lead turns, and lag turns. There were no limited egos—when Chuck Yeager flew Sky Warriors a few years back, he had to start at the same stage. Besides, even the most experienced sim pilots will find that the physical sensations and situational awareness in a real plane add so much to the equation that things work very differently from sim flying.

THE WIL0 BLUE

We suited up, headed out to the flight line, and boarded our T-34As. Despite the small size of the ex-military trainers, the cockpits were fairly roomy. The bubble canopies afforded a superb view (canopy frames, so obtrusive in games like *Warbirds*, can easily be looked around). When you fly with Sky Warriors, you control only the stick and rudder, after an expensive incident with a blown engine a few years back, the group decided to allow the safety pilot to handle the throttle.

After takeoff, we made a nontypical run over downtown Atlanta to fly formation with a banner-towing Super Cub. This proved quite challenging for the safety pilots, trying to fly close formation at full flaps while the T-34s hung on a stall so as not to leave the full-throttle Super Cub in our trails. In our later flying, we could maintain formation with very small (0.5 to 1 inch) stick tapots, but during this low-speed maneuver, I could see the control stick moving through a 7- to 8-inch range.

After we broke off and cleaned up the airplane, the safety pilots put us in formation and passed off the sticks to the front-seaters. Because it's not glamorous (unless the Thunderbirds or Blue Angels are doing it), formation flying is neglected in most sims—*SABER* ACE being the notable exception. Still, it's extremely challenging and exciting in its own right. Hanging a few feet off the wingtip of another T-34, you keep your eyes locked on your lead plane while making subtle adjustments with the stick. If Roles wasn't showing me about the quality of

my performance for a first-time formation pilot, apparently I'd learned a lot of joystick finesse in all my years of sim flying. The most surprising thing was how much easier it was to fly in very tight formation than in combat spread.

FIGHT'S ON!

Once we reached the exercise area, we flew in a trail formation, taking practice shots. (For less experienced pilots, this guarantees some kill video.) Each T-34 is equipped with a laser and laser-detection devices. Pressing the joystick trigger fires the laser and plays a sampled machine-gun sound. If you hit the other plane, a smoke screen triggers and a kill icon plays in the target pilot's headset to let him know he just died.

After the practice, the fight was on. We took turns going one-on-one, sticking primarily to the High and Low Yo-Yos we'd been trained in. There's not much of a vertical element in the first phase of Sky Warriors training, so we never got close to the 3,000-foot hard deck. Even with the gentle beginning

sortie, combat was exhilarating. Even the best sim experience can't match the adrenaline rush of pulling Gs as you slide in 600 feet behind another aircraft, press the trigger, and see the satisfying trail of smoke that signifies a kill.

One big difference from sim flight was the use of the body as a cue

for staying in the plane's performance envelope. The difference between 3 Gs and 4 Gs was quite pronounced as my body was pressed back into the seat, and a slight tickle in the stick warned of accelerated stalls when I pulled too hard into a turn.

For about \$700, you get a military-style briefing in combat tactics, approximately 1.25 hours of flight time, and a video of the experience with external, gunsight, and "hero cam" views. It's an expensive experience, but it's one you'll never forget. **S**

THREE VIEWS TO A KILL

Each Sky Warriors T-34 is equipped with three cameras: a gun camera, the "hero cam," and a forward-looking fisheye camera.

Why Games Should Not Try To Be Movies

“The problem with FMV games is that as movies, they are second-rate games, and as games, they are second-rate movies.”

Some 15 years ago, my father sat me on his knee and said, “Son, I know how you enjoy those video games of yours, but you ain’t seen nothing yet. Think Pac-Man is really something? One day video games won’t be about a big dot eating little dots, they’ll have pictures of actual people moving around and doing things. It’ll be like a movie.” To which I responded, “Not You can’t make a game that way! It wouldn’t be any good!” And life being what it is, a thing of tones and reveals, it has come to pass that we were both right.

TWO THUMBS DOWN

Multimedia games have been with us for several years now. The first one I remember was *DAVID WOLF: SECRET AGENT*, by Dynamix, which interspersed crude video cut-scenes in the crude action sequences. If you count animated cut-scenes, you can stretch the definition to include the animated interludes between mazes in *PAC-MAN* (and my comparison of this game to *DAVID WOLF* irritates some Dynamix folks even today). Ever since then, the quality of the video has been improving—in terms of frames-per-second and the like—but the games in which full-motion video is used are still, by and large, dismal.

For starters, filming video sequences for a game requires that you hire actors, and the best actors generally go where the best money is. Except for a few skimming visionaries who have been willing to participate in a game for the hell of it, the dramatic personnel featured

in games tends to be a *Who’s Who* of has-beens, never-were’s, and never-gonna-be’s. Sometimes a game surprises you with good casting, but then, sometimes an airplane crash surprises you by yielding survivors. But, the odds against that happening are enormous.

But it’s not just the casts’ fault. Nor is it the amateurish dialogue, which games have trained themselves to ignore, or the wallowing in stereotype and cliché. (God save us from another

CUT-SCENE Now standard industry lingo for a non-interactive sequence, the term came from *Looney Tunes*, which coined it by *Motion Picture*, but there the cut-scenes were animated, not video.

FMV game featuring a trench coat, a whiskey bottle, a voiceover, and a semi-phone.) The thing that really makes FMV games dismal is that, as games, they are either utterly unimproved or actively worsened by the presence of the FMV sequences.

Into the first category fall all the games that would play exactly the same if you removed the FMV *Hasbro* new versions of *BUTTERFLY* and *OTHELLO*, for instance, or the enhanced version of *Sin City*, don’t benefit materially from

FMV. Gameplay is slower and jerkier, and all for what? So you can see your opponent’s *OTHELLO* disk flipped by some ham dressed up as Leonardo DaVinci?

The second category includes all the games that cost solely as experiments in FMV. The earliest was *VORTEX*, which Phillips is still peddling, all these years later, as a PC CD-ROM. Here, you direct your “telescope” to peer into your choice of a few dozen windows in a house across the road. Which video scene plays depends upon which window you choose.

The most recent entry into this category is *Any River A Fork in the Tale*, in which you have to click on icons superimposed on video scenes to select which plot branch (that is to say, which video scene) to visit next. Inside a given scene, there is no opportunity to interact or, frankly, to do anything at all. It’s like pressing Play on a really crummy VCR that contains a lousy, one-minute-long videotape, then doing it again, and again, and again.

THE SLICK AND THE BAD

When I show my father some of the latest games, he never misses a chance to say, “I told you so.” And so he did. Games today often contain video sequences, and those sequences are sort of like movies. The problem is that as movies, they are second-rate games, and as games, they are second-rate movies.

There is something to be said for the second-rate, of course, particularly in a medium’s early years. No one today compliments the camerawork or the writing in the average silent picture, but we recognize that it was a phase the movie industry had to go through. Caring will go through this phase and emerge the better for it. But, oh, how I wish it were over! I think even my father would agree that another 15 years is just too long to wait. ☞

WAR IS HELL.

(ALTHOUGH WITH THE RIGHT GAME,
IT'S ALSO SORT OF FUN.)

How do you outgun a great game, like Robert E. Lee's *Civil War General*? With *Civil War General II* you can now command "Confederate" or Union Armies. And you can put yourself in the boots of Lee, Grant, or Sherman as you attempt to rewrite history.

Civil War General II carries combat reality with 40 legendary battles from both the Eastern and Western theaters. But if you want to wage your own wars, use the map editor to create terrain, armies, and commanders. Then go online to test your cunning in head-to-head battles.

This war isn't just hell. It's history. And you'll experience it as never before with an unparalleled new collection of Mark Kinsler paintings and all-new multimedia mini-documentaries on the men, weapons, and tactics of the Civil War.

SIERRA®

<http://www.Sierra.com>

FROM THE CREATORS OF ROBERT E. LEE: CIVIL WAR GENERAL

BRIEFINGS

commercial success of *Close Combat*, *Platoon Leader* also has a great deal of its own chrome. If you like *Panzerfausts*, for instance, you have four types from which to choose—provided that you have enough munitions points to spend.

It's a little too early to tell if the fuzzy logic used for the AI will become the WWII version of *Broken*

Blue or just soggy lint, but at least the design team is trying a different tack. With plenty of famous scenarios (*Pernage* is pretty tense) and a distinct role-playing feel, this one looks like a real sleeper.

Dark Comic Images

Coinciding with the release of MicroProse's *Guardians: Agents of Justice*, Wildstorm

CLOSE COMBAT II If you think this is just a recap of the first, I've got a nice Anheim bridge to sell you.

battles. Finally, there is an overarching campaign that allows you to take the role of the paratroopers landing at Anheim or the Allied forces trying to link up with them from the southwest. Throw in a good mix of historically plausible alternative scenarios, and you have one potentially great wargame.

It's wonderful that Atomic Games has found its creative second wind. As Atomic and Microsoft continue to push each other, gamers will only

benefit. My only question is this: When does this system get translated to the North African desert?

RISE AND FALL

As you probably noticed from this month's sneak preview of *AGE OF EMPIRES*, this game is not just *CIVILIZATION* with a real-time twist. There are some similarities, but *AGE OF EMPIRES* has its own distinctive style. Focusing on the ancient world—and pulling it off—it is a stroke of genius, because all of the other games that have tried to simulate this time period, even

seems more fluid and less predictable than before. The new, improved interface lets you move around more quickly to issue orders. Best of all, there's finally a zoom function, so you can actually see the SVCA graphics soldiers under your command when your eyes get tired from playing until 3 a.m.

There are many more things I could compliment—not the least of which is the improved line-of-sight and field of fire implementation—but what I like most about *CLOSE COMBAT II* has little to do with improvements in realism or technical issues.

My big problem with the first *Close Combat* was that it wasn't much of a game. And even when it's considered a combat simulation, the concept didn't always work. Too often, *CLOSE COMBAT* ran under its own steam, as it didn't seem to make any difference what decisions you made—hardly incentive for replay.

CLOSE COMBAT II, however, has a more interesting historical situation than its predecessor, which translates into better, more engaging scenarios. The AI seems more adaptable, and there's even a "design-your-own" option for online

STARSHIP TITANIC.

BRIEFINGS

Comics will issue a graphic novel featuring characters from the game. It's a natural, given the dark nature of the superhero world that Steve Bardi and company have created. No word yet on whether this will be a solo collector's item or a continuing series, but given

Wildstorm's history—particularly the online comic *Siege*—our bet is that it will be anything but dull.

If you're interested in related gaming/comics items, you should check out *WildStorm: The Expandable Super-Hero Collectible Card Game*, by Aegea Entertainment, a.k.a. Wildstorm. In addition to some clever variations on the timeworn collectible-card theme, you'll find a lot of your favorite superheroes. Susan Storm—the Invisible Girl from the Fantastic 4—

Arkon Hills' *ADVANCED CIVILIZATION*, have had significant flaws.

There are a lot of nice touches in *AGE OF EMPIRES*. I particularly like the fact that you can win economically as well as through combat, so that play doesn't degenerate into another C&C clone. It's certainly more suited for a quick game during lunch than is *Civ*, and the terrain editor is one of the best I've seen this year.

When I first saw *AGE OF EMPIRES* months ago, I wasn't particularly impressed. But Bruce Shelley and Ensemble Studios kept at it, and they have one of the finest titles of the year. My main concern is how well the AI will hold up, since most gamers still play the majority of their games solo. If that isn't a problem, and the dynamic differences between the various tribes are fleshed out in the final design, then this will be one of the contenders for best strategy game.

Let me put one rumor to rest, however: Bruce Shelley is not the patron saint of turn-based gamers, any more than Sid Meier is. Keep in mind that *RAILROAD TICOON* was real-time many years before it was the height of gaming fashion, and count yourselves lucky that Bruce can still put his best design pitch over the plate. So read the inezek preview already (grrr)!

MORE THAN MOO?

Long before *MASTER OF ORION* was even a twinkle in Steve Bardi's eye, SSC almost single-handedly invented the space exploration/exploitation genre with *REACH FOR THE STARS*. For years, the fans of this CCW Hall of Fame game have clamored for a sequel. It seems likely that *REACH FOR THE STARS II* will debut on Windows 95 sometime in late spring 1998.

Cameplay looks to be similar to the original, in that you balance economics, diplomacy, military force, and exploration. As with other games of this type, you begin on a single world and branch out through the galaxy as fast as your research (and nerve) can take you. You're probably thinking that you've heard this before. Currently, *MOO II* rules the gaming galaxy, and *PRO IMPERIA* looms large for this fall. Yet *REACH FOR THE STARS II* is probably the closest thing Microsoft has to a sure hit.

AGE OF EMPIRES Now you can execute hostile takeovers of the ancient world.

The reason? Simply that Roger Keating does the best AI in the business. With an extra year to improve on the

Boppy Headcase and his Laidback Loafers—music to go mad by on the STARSHIP TITANIC.

SSI

A HINDSIGHT COMPANY

BRIEFINGS

looks a bit too Kate Moss-like for me, but she's a powerful character in the game nonetheless.

Stormy Weather

Seems the Marines won't be hitting the beaches just yet: Interactive Magic's *Seven A* will be delayed past fall—perhaps even until February 1998. In addition to the usual interface tweaking

that all strategy games go through these days, it seems that the AI is undergoing a complete overhaul to ensure that it can handle the subtleties of combined arms. I wouldn't worry too much, since the developers, Stanley Associates, have shown that they'd rather take the time to do the game right—a policy that proved a major benefit to their last game, *WOODEN SHIPS & IRON MEN* (Avalon Hill).

the review in this issue), SSC decided it didn't want all its gaudy eggs in one basket, and began negotiations with Microsoft. Even though it's committed to real-time strategy games, Microsoft, to the company's credit, quickly signed the real-time classic.

The timing of *CLOSE COMBAT II* could hardly be better. Its ship date hits around the same time as *PUNGER GENERAL III*.

Gamers are likely to buy both, so that they can have a "serious" and a "beer & pretzels" wargame. There isn't anything that comes close to *AGE OF EMPIRES*, so Microsoft has a big marketing edge in a glutted real-time strategy season.

Conspiracy theorists will no doubt keen Microsoft's upcoming gaming success to the advent of fluoridated water, mass hypnosis, and orbital mind-control lasers. But I can't see myself losing sleep over Bill Gates' impending conquest of the strategy gaming genre. Maybe after a few months of playing *CLOSE*.

COMBAT II, *AGE OF EMPIRES*, and *REACH FOR THE STARS II* until 3 a.m., I'll stop to consider the implications. ☸

REACH FOR THE STARS II Bill Gates, tired of ruling only Earth, expands his domain to include the entire galaxy.

algorithms, Keating and Co. will almost certainly provide a tougher computer opponent than that of *MOO II* or *Pox IMPERIA II*. And if the multiplayer code we've seen in *WALLORES III* is any indication, playing *REACH FOR THE STARS II* over the Internet could make you give up on *MOO II*'s stodgy multiplayer mode forever.

In any case, the space strategy subgenre should be wide open for *REACH FOR THE STARS II* by the time it releases. If this sequel is half as elegant and enticing as the first, maybe even Charles Arden will have a science-fiction game he can enjoy.

Just to note in passing, SSC continues to pay at least lip service to the Macintosh. Right now, the official comment is that a Mac version of *REACH FOR THE STARS II* is planned. Microsoft had no comment whatsoever on this subject, so draw your own conclusions.

DIVIDE & CONQUER

Like any team working successfully through the free-agent waters, Microsoft has benefited from a gambler's sense of good timing. *REACH FOR THE STARS II* was one of three SSC games planned for release within a year. Because *Brederlund* already had *WALLORES III*, and *SSI* ended up with *DECISIVE BATTLES OF WWII: THE ARDENNES OFFENSIVE* (see

STARSHIP TITANIC. Luxury. Style. Elegance. And a parrot.

MDK

The World's Most Complete Killing Manual

by Thierry Nguyen

Okay, Kurt, saving the Earth from the Stream Riders is going to be a hard task. To aid you, I've written this document. It includes details on some weapons not covered in the original manual, intelligence and tips for minecrawlers four and five in particular (since one and two were already covered, and three isn't so hard), detailed methods of killing the drivers of the third, fourth, and fifth minecrawler, and a guide to killing Gunter as the final battle. I didn't cover Gunter's homeworld because it is pretty straightforward, and the hardest part is the actual match with Gunter. Let's start with the weapons.

SURFS UP During the snowboard sequences, move left and right in order to avoid their fire. Jump on "Grooves" to get rid of the tunnels with cow bombs.

WEAPONS EVALUATION

The Whites of Their Eyes

Your basic sniper bullet is quite useful, as it deals decent damage and comes in unlimited quantities. The first upgrade is the homing bullet, which tracks whatever was under the crosshairs when you fired. This is effective for targeting those snipers that stay in one place to aim and then move. Their main disadvantage is their less-than-stellar turning speed, so don't expect them to go around corners every time.

The next upgrade is the sniper grenade. Since it explodes, it's useful for times when you can't get a precise shot; the explosion is sure to hit something. It's also good for tightly packed groups. This also comes in a homing version, making it even more lethal.

Then comes the mortar, which is harder to use because it bounces and employs a timer. It's hard to hit someone directly with it, since the bouncing makes it a bit unpredictable, and the timer means the blast is delayed. But, if you're on an elevated platform overlooking enemies, it's good to send down a shower of them. Since it doesn't explode right away, you can try to bounce it around enemies and use it as a makeshift cannon.

Finally comes the Bones Anzlie. This is best for silencing immobile groups of enemies or generators. Since Bones takes a while to get

there, even slow-moving targets, like tanks, might have moved before he arrives. Save Bones for aliens in trenches or tunnels, or for a cluster of generators, and it will cut down on the enemies you have to face.

Up Close and Personal

The weapons not covered in depth in the manual are the "Thumper" and the "Twister." The Thumper is a large hammer that causes a small earthquake, which disorients and damages your opponents. But it can damage you as well, so the best advice is to jump around with the parachute once you trigger it.

The Twister is something totally new, and is a great area-effect weapon. It simply creates a tornado of energy that spins out rays in various directions, which in turn damage all enemies in the general area. The grunts will be killed while the larger ones will be badly hurt. Save this weapon for crowded areas, and then pick off any stragglers that survive the onslaught.

LEVEL TRICKS

Snowboards Away!

The hardest part about the fourth minecrawler is the snowboarding sequence. Make sure you weave from side to side and slow down. If

LEAPS AND BOUNDS To reach the high door in level two, jump from the tallest arch here, in order to get the arms needed.

you want to get all the red bones for a power-up, just press down to apply the brake and slow yourself so you can weave to the bone. When you need to fight enemies on snowboards, just weave left and right in order to avoid their fire. And whenever you see a higher platform, jump to it. The platforms hold "Crocovets," which will drop cows on the enemy turrets to clear your path. If you don't, you won't be able to take out the turrets because your gun isn't up to the task.

Cars and Alarms

The fifth level has three main trouble spots: The area with the enormous door, the tall building with the cars scolding around, and the three lifts near the end. For the gigantic door, you need to snipe, use the Thumper, and be maneuverable. On ground level, proceed to the door on the right to get the World's Smallest Nuclear Explosion. There will be one massive guard at the door; avoid his fire, since one shot takes away twenty hitpoints. Then, from the doorway, snipe headshots at the two sleeping guards. Now, go out and proceed to the left doorway. Stand a ways from it, snipe the alarm bot, and then snipe the sleeping guards (if you don't get the alarm, you'll have to fight awake guard bots). Go up the ramp to the second level, kill the generators near you, jump to the other side, and grab that Thumper. Two giant robots will arrive, and that's when you use the Thumper to severely weaken them. Once they're weakened, dispatch them and jump into the hole, kill two more of those big robots, and use the mule on the look at the top of the door.

In the area with the cars, first get rid of all the enemies, their alarms, and the drivers of the cars.

The cars themselves will be left behind, and can be moved forward by shooting them. Maneuver a car around until it gives you the height to jump onto a platform. Do some platform hopping until you get onto the rail, then walk around. Don't kill the driver of the lone car on the rail yet. Find where you are supposed to jump to,

and wait there for the car. Kill the driver so that the car is near the platform you want to get to; otherwise, you'll have to move it around the entire rail, and then move on.

Finally, let's discuss the three lifts area. Once you've killed everyone in the area, jump from the stairs to the shortest lift (the one on the far right). Then, make your way to the tallest lift (on the left) by using the other two. Once you reach the tallest one, turn around, and parachute your way to the door on the other side. If done right, you will barely make it. The key is to start from the highest lift for more air time.

BOSS BITS

Safe in My Goldfish Bowl

The third minicrawler driver is one of the easiest ones (only the first driver is easier). This driver has heard about your previous exploits and has sealed himself in his own personal aquarium. Below him are four "dog generators," and the lid on his tank has four holes. Basically, you have to open the tank by undoing the four bolts in it. The bolts appear only as the driver spins the lid and changes his guns.

First, dispatch the dogs that come out of the generator. When the four bolts light up and start slowing down, switch to sniper mode (as the dogs should have been taken care of by then). Wait until the lid stops spinning, target one bolt in particular, and shoot. It should come off in a single shot. Then, swap out to normal view and avoid the incoming fire. Just repeat this pattern—kill dogs, aim at bolt, shoot bolt, avoid laserfire—and you will succeed in killing this boss.

Man the Sub Turrets!

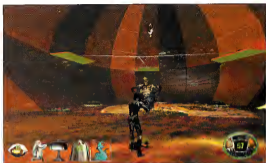

Technically speaking, there is no real driver for the fourth minicrawler. The fourth minicrawler is controlled by some of the smarter

LET'S BOLT Target the bolts quickly when they light up below they fire on you

aliens inside a submarine, so when you clear out the sub, the minecrawler ceases to exist.

To get into the sub you have to dispatch two annoying "charging snipers" first. Once you get rid of them, the enemy drops a tank on you. After destroying the tank, you'll gain the World's Smallest Nuclear Explosion, which you use to open the sub's hatch door. Then, you'll see one of the machines you have to destroy: a submarine turret. The alien inside is completely encased in armor, so a shot to his head won't work. The only opening is at the bottom of the turret, and the turret floats on top of an airlift. All you have to do is "deliver" some explosives to him. Avoid the explosive balls he chuckles at you, and toss

BUG APPETITE Toss the "Gunter Snack" to distract Gunter and grab that nuke behind him.

UPSY-DAISY Toss the grenade into the airlift in order to injure the turret gunners for the fourth minecrawler.

HAN THE CANNONS Shoot these turrets off the dreadnought to get it off your back in the beginning and end of minecrawler five.

grenades into that airlift. They will go into the one hole that is open and injure him. It takes about three or four grenades to kill him. Proceed to the top of the submarine and destroy all the grunts and generators waiting for you. This is where a decoy comes in handy. Finally, follow the snowboarding sequence to the second turret, destroy him as you destroyed the first, and the submarine and minecrawler will be destroyed.

Snipe That Dreadnought

You'll see Bones strung up and Gunter relaxing, but this isn't where you face him yet. When you get his attention by taking a pot-shot at him, he closes his chamber and that dreadnought that has been hounding you since the beginning of the level arrives. Just as you will have done earlier in the level, disable the ship by simply shooting off its turrets. The dreadnought will fly by at a distance, which is the perfect time to snipe away, since its shots take a while to reach you. When it passes directly over you, it's time to run and dodge. The dreadnought repeats this pattern of "fire from afar" and "close pass" so just persevere and you will shoot it down, thus destroying the fifth and final minecrawler.

Feed Me!

Your final, mano a mano fight with Gunter isn't a fatfight, it's a game of distraction and dodging. To free Bones, you need to unlock his ropes by using World's Smallest Nuclear Explosions. Yet the nuke is behind Gunter, who is simply too big and powerful for a frontal assault. Instead, jump on the button to capture a "gunter snack," pick it up and use it near Gunter. He will run to eat it, giving you a chance to slip by, pick up the nuke, and run to a working airlift to unlock a rope. Just repeat this process until Bones is free. Aside from Gunter's one guard alien, the only real worry you have is taking too long (Gunter will attack eventually). Avoid the both of them, free Bones, and then use Bones to finally kill Gunter once and for all. Then, peace will finally be restored. **S**

Dynamix

STRATEGY & TIPS

History of the World

How To Mold History in Your Own Image

by Terry Coleman

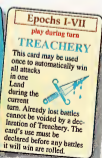

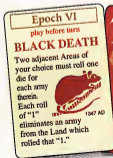

Sure, HISTORY OF THE WORLD doesn't quite measure up to the inspired multiplayer dynamics of the boardgame on which it is based—mostly because there are no provisions for LAN or Internet play. Still, it offers strong AI opponents and much faster play. Plus, the computer relieves you of those nagging accounting headaches. With that in mind, here are my Top 10 tips and advice on which empires to play—and which empires to avoid at all costs.

The Victor Writes the History

- 1. Every game should have six players, even if you have to fill out the ranks with AI empire-builders.** Playing with fewer will guarantee a faster finish, but since the computer version plays three to four times faster than cardboard anyway, what's the point?
- 2. Should you play with seven players? No.** Just because something is different on the computer (the boardgame allows for only six players), doesn't make it better. You lose the element of mystery that occurs in those games when no one gets the Mongols—or gets stuck with the Khazars.
- 3. Use my favorite game bug.** One bug in the programming occasionally lets you use the same disaster card twice on an opponent. What a nice problem to solve.

- 4. Stay away from the fortress option.** This is important if you want a free-wheeling game. Those who desire more defensive-minded games should try Risk!
- 5. Don't use the silly Preservation of Culture rule.** What little historical flavor there is, is thereby lost. Worse, this channels play into too-predictable lines. Besides, you should never become too attached to a monument (see Number 3).
- 6. Don't fret over lost territory!** The game is designed so that empires rise and fall appropriately. You can actually come from behind to win games—even if you end one of the middle turns with zero pieces in play—because no one considers you a threat!
- 7. It's bad to be the front-runner early on.** It's often better to pass on the Romans or Persians, so that you get better card picks later.
- 8. Don't let anyone have a back-to-back turn.** For example, sticking someone with Russia the last turn is usually a good bet—unless they just wrapped up the previous turn with Spain or the Mughals. If so, that player would rack up all the points from last turn plus the new turn. I once saw a tournament decided this way after five hours of tense play.

9. The game is usually won or lost by how you manage middle empires. This is so true, although it's always tempting to save killer cards for the big empires. The Portuguese are tough with Naval Supremacy and/or Ship Building, and even the Chola benefit from a Treachery or Population Explosion card.

10. Don't underestimate the joys of small play. *Historia* is the perfect game to play a turn before breakfast, or between projects while at work. Be sure that you remember to send diplomatic messages to other players when you send off your saved-game email file to the next opponent. The computer version of *HISTORIA* can't match the boardgame for player interaction, but with an honest effort at backstabbing, deal-making, and abject whining, it can still be a fun experience.

The Top 10 Empires

1. Britain

Power: 20

The Scoop: This is the one Empire card you never trade away. If you are within 40 of the leader on the last turn and you get Britain, you have a good shot at winning. Having access to every ocean means that you can strike anywhere in the world.

Tips: Keep a Civil Service or Population Explosion card for a couple of extra armies. Don't worry about defense; once you've scored your points, no one can take them away from you.

2. Mongolia

Power: 20

The Scoop: While they have fewer pieces in play than the Romans, the Mongols have little quality opposition. These awe-inspiring hordes can strike China, India, Asia, and even Europe, all the while racking up a huge amount of points.

Tips: A Leader or Weaponry card is a

must. You should also save a Treachery or Surprise Attack card to remove the Great Wall defense of China.

3. Rome

Power: 25

The Scoop: Why isn't it Number 1?

Simple: Rome comes to power too early in the game. Not only do you have potentially tough opposition from the Persians and the Macedonians, if you get this card, you'll also probably be dead last to draw for empires for the rest of the game—a tremendous handicap.

Tips: Double up your best military and technology cards. A Leader combined with Weaponry might bail you out. Do everything to score as many points as possible, otherwise you're doomed.

4. Arabs

Power: 18

The Scoop: By the time the Arabs show up, the Middle East is usually devastated and open for domination, as is Africa. Shoot for a presence in Europe and India as well, and place fleets carefully (the Red Sea), so that they will last extra turns.

Tips: Be cliché. Revel in a Jihad celebration if you have the card. Otherwise, this versatile empire benefits from almost any event you play.

5. Spain

Power: 15

The Scoop: An oft-underestimated empire

that can really make hay in the penultimate epoch.

Choose your beachheads in the Americas well and you might keep them out of Britain's hands. Stick to the oceans rather than the seas.

Tips: Save a Barbarian card to clear out territory that you can then walk into freely. Fanathism is appropriate; missionaries historically accompanied Conquistadors.

6. Ottoman Turks

Power: 15

The Scoop: Sort of the poor man's

Arabs, this empire benefits from a power vacuum. Go for broke, especially in the Middle East and India. Between Portugal, Spain, and the Mughals, it's likely your empire won't last out the turn.

Tips: A better time for Naval Technology than a Leader card. Use Pestilence, Plague, and, especially, Black Death (only good during this epoch) to soften up your enemies.

7. Macedonia

Power: 15

The Scoop: Only getting 15 pieces makes you appreciate Alexander's genius all the more. Take the traditional route through Asia Minor toward India, but make sure to leave enough of the Persians to slow down the Romans.

Tips: A Leader is obvious, but Elite Troops are even better. The board should also be open enough to get mileage from the Allies card.

8. France

Power: 15

The Scoop:

Though it often gets lost in the British wake, France is a great empire with which to close. Go for presence in several areas overall, and concentrate in one area for dominance, in order to maximize your lesser amount of pieces.

Tips: A Leader solves a lot of your problems. This is one of the few empires that benefits greatly from good defense; use Empires Fortify or any Kingdom card you have.

9. Persia

Power: 15

The Scoop:

Darius gets a bad rap because Alex toasted his empire. In History, Persia usually scores well, because it's the first big empire. Problem is, getting this empire means that you might pick next-to-last for several turns.

Tips: Since you're stuck with it, stretch as far as possible. Don't waste a Leader; try Ship Building or anything that gives you extra armies.

10. Han Dynasty

Power: 12

The Scoop: The Han Dynasty, the best of a mediocre lot of Chinese Empires, tends to survive for longer than it deserves—a real sleeper. Total control of China is possible with additional armies. Otherwise, make sure to build

lots of fleets.

Tips: You can generally keep a presence in China for a while. Build forts, use the Engineering card if you have it, and pray for good dice.

The Worst 5 Empires

1. Khmers

Power: 5

The Scoop: These guys are beyond hopeless: It's tough to make any headway in either India or China; worse, you have to burn a fleet, leaving you with only four armies. Any momentum comes to a halt when you get stuck with this card.

Tips: Try not to be in the lead during Epoch IV, so that someone other than you gets this card—even the Guptas are better.

2. United States

Power: 10

The Scoop: This reflects the fact that before WWII, the U.S. was a hemispheric—not a world—power. The only reason this empire is preferable to the Khmers is that it has enough oomph to dominate North America, but even that's not guaranteed.

Tips: There is very little of use here. Your inability to sail across the oceans puts most goodies out of your reach. Deny points to your opponents through disasters; you're in the spoiler role now.

3. Incas & Aztecs

Power: 2 for each

The Scoop:

Getting this is actually not as bad as in the boardgame, because you can dominate either North or South America.

Tips: Don't waste time with forts; they won't hold up against the Spanish, French, and British. Allies or Civil Service can keep this card from being a total disaster.

4. Aryans

Power: 5

The Scoop: The only Epoch I empire without a capital, it suffers from a relatively high army count as well—without really having enough clout to make a difference.

Tips: Always pass this to your worst enemy. If you have it, don't waste any cards; save them for something better.

5. Hsiung-Nu

Power: 7

The Scoop: With no capital and pinned between the Han Dynasty and the Romans, these guys badly want to be Mongols when they grow up.

Tips: Anything to spread yourself around the map—Kingdom, Crusades, Civil War, Empires Rattle—is a good idea, because once the Romans and Sassanids pass through, you'll be dust. ☹

DOGDAY™

AN ADVENTURE

You're a dog in a dog eat dog world.

Where getting drunk as a dog and defeating the top dog, is so real your friends may have to stop you from chasing cats and drinking from the toilet bowl...

Features

STRATEGY & TIPS

Shadows Over Riva

Follow Scorpia's Tail As She Makes Her Way Through Sir-Tech's Massive RPG

by Scorpia

SHADOWS OVER RIVA, the third game in Sir-Tech's REALMS OF ARKANIA series, is a long game that should keep you busy for a while. The best way to get through it is with your own party, which you can create or import from S'DAI TRAIL. Creating your own party takes time, but will give you better results overall than letting the computer do all the work. Always do level gain points yourself, too. You absolutely must have at least two, preferably three, spellcasters with good values in Fulminatus for the final combat. Anything less is likely to mean disaster here, as your fighting characters will be of little use (except as buffers).

It's My Party

My best team consisted of a magicist, two fighters, a dwarf, a Green Elf, and a Sylvan Elf. That gave a good combination of hitting power and magic, and elves, with their bows, are deadly shots.

Regenes are mostly useless; their main worth is lock-picking, and a dwarf (a far better fighter) can be brought up in lock-picking just as well. Take a dwarf instead of a regene to make life easier. None of the other classes seem especially worthwhile, although a couple of druid spells (Evil Eye and Dance) can be useful. However, druids aren't much good in melee combat, and I consider it better (especially if you're not familiar with the ARKANIA system) to have another fighter instead of a druid.

The best spells to have among your mages are Fulminatus, Lightning, Paralysis, Somnigravus, Evil Eye, Homingbeats, Boim of Round, Pure & Clear, and Rest the Body. Other helpful spells are Destructio (for destroying evil books), Banish Spirits, Transversals, Analyse, Penetrating, and Sakother.

The important nonfighting skills are Climbing (everyone), Stealth (everyone—one person should be very good at this), Swimming (everyone), Physical & Self Control (everyone), Hide (everyone), Treat Wounds/Disease/Poison (one or two characters in each category), Herb Lore (one person; five is a high enough rating here), Danger Sense & Perception (one person should be very good at these), Haggle (one character with high charisma), Tactics (everyone, especially fighters), and Streetwise (one person, should also have a high Stealth skill).

RPG BAWDY BROTHEL: Yes, you can still take a visit to the local brothel if you're a bit stressed out.

All characters should have at least one combat skill, and fighters—naturally—should be brought up in several. In the end game, you will have to fight hand-to-hand for a while, so get a point in Hand-to-Hand each level gain. Also get points into either Edged or Pointed weapons in preparation for the last section (it will be a while before swordlike weapons are found there). For much of RIVA, swords are the best weapons, so be sure your fighters are good in sword skills. Elves, of course, should work on missile weapons. When going up levels, a magician-type should always exchange the spell attempts for extra astral points. When doing the split between life and astral for all spellcasters, put the majority of points in astral, but always get one or two into life.

Since most of the action takes place in and around a city, you don't have to worry much about food. A couple of rats and a waterskin will see you through the entire game; don't fill up on those things. When sleeping to regain hit points and astral points, take the cheapest rooms and sleep as long as necessary. Do several days in a row, then eat something. You get better results with uninterrupted rest. Expensive rooms heal you faster, but with six or seven in the party, your money can disappear quickly. In most cases, you can always take as long as you need to rest up off an inn.

Combat Tips

All combat scenes take a long time to get through, even for a well-equipped, experienced group, so be patient. In many fights, the party

will be outnumbered by the enemy, and delaying tactics are vital to surviving.

Casting Lightning and Sonnigravis in the first couple of rounds is important. Elves are especially good with Sonnigravis and can (with high skill) keep opponents snoring through much of the fight. The only difficulty is remembering which ones have been put to sleep, attacking a sleeping opponent will wake it up again. Obviously, this is something to be avoided!

Try to keep your fighters from becoming surrounded. If that happens, knock out one or two enemies with spells as soon as possible. Try to position your spellcasters and elves in the rear, but where they have good diagonal lines for casting spells and using bows (the diagonal doesn't have to be exact, but there must be a clear path to the target). Mages in particular should have their full eight movement points available during combat.

If things are going badly, don't wait for the inevitable. Restore to a previous save and try again, or avoid the combat (if possible) until your party is better equipped or has advanced in level.

Early on, you have the chance to add Thorgrim to your party as an NPC companion. He is an excellent fighter and can be helpful in many tough combats. The downside is that he shares in the experience awards, thereby giving less to your own people. If you have Thorgrim with you whenever possible, it will cost you a level gain for your characters. This is something to think about, as you'll only get about a maximum of three levels by the time you're into the endgame.

Exploring Riva

Riva is too big to give a lot of detail in a single article, so the rest of the column just hits some of the main points of the dungeons and areas in the game.

Before you start the main line (triggered by talking to Tank in the Harbour Maid Tavern), you may want to build up your party a bit, both in experience and equipment. You can do this by avoiding the Tavern for a while, and doing a few other things instead.

First, clean up the cemetery (see the Priestess in the Firm Temple). Under the graveyard, you really only have to fight one

▶ BIG RED FNU It plays wherever you encounter important monsters. In this case, we're about to do combat with a demon.

golem (easy pickings with the Lightning spell). If the other combats down there are too tough, leave them for later, the undead aren't going anywhere (hint).

In the main combat aboveground, against the Heshatol, be aware that ordinary weapons don't affect them. Use Falsinictus spells on the demons and have your fighters go after the Devil when he appears in a round or so.

With that taken care of, you can go out the south gate to visit the tiny wilderness, and help Stipen graduate from the Mages Academy. All middle answers are in the immediate area; you don't have to leave the outdoors to find the locations to blow the horn. Save first, as Stipen falls after three mistakes.

Dwarven Mines: All fights on Level 1 are optional. Be especially careful of the large Orc group in the dining room. Entry to Level 2 is immediately south of where you enter the mines. On Level 2, you must fight the Orc group in the big room to proceed.

Search to the left and right past this room to find a couple of magic swords (the only magic weapons in the game). Level 3 is one long corridor that is full of traps. The character with the best perception should be in the lead, expect to take damage anyway. Examine

walls along the way for magic runes your magician can translate. The demon can be hit only by magic weapons and spells (good old Falsinictus again). Manesh and his friends are an easy fight. Destroy the demon book before leaving.

Sewers: Open after speaking to Tank. Make one trip below to see the watchtower and the monster. On your second visit, an NPC briefly joins your party. The sewers are mainly safe, except for one grate area where you (optionally) fight guards. When you go to Level 3 to kill the monster, that will be the only encounter in that area. Whoever opens the chest behind the mirror should eat some antihypnotism first.

Magician's Tower: Level 1 has only one encounter with bandits. Unfortunately, you must leave someone behind at the elevator for the rest of the lower sequence (do not leave your lock-picker; you will need him). Level 2 contains many fights against undead; you will need their diamond eyes to open doors. Get the four wands from the dog statues before destroying them. Level 3 is fairly safe, but be wary of the history halls leading to unpleasant

You are safe here. The natives are a peaceful people.

▶ THAT'S WHAT HE SAID Just as in the previous *Amnesia* games, important conversations or monologues have their own scene. This one is particularly cool because an interpreter (on the left) is needed to translate the Nix language.

consequences. The only fights here are with the magician and with Pengor the slushbifter. You can destroy Pengor completely on Level 4 by putting together the magical mosaic (this is the only way to get rid of him).

Pirates: Detach the character with the best Stealth/Streetwise skills. This person should knock on the door and follow the pirate. Once you see where he has gone, rejoin the group and go in there.

Bride of Winds: The object is to get off the ship. You have only one hour to do this. Answering the Sea Fairy's riddles will gain you an extra half hour. Combats and room searches are optional.

Hunted as Murderers: You can travel around via the sewer system to avoid guards. Merchants will still buy and sell with you. A party with good Stealth and Hide skills can usually avoid encounters on the streets.

Fortress: You must free the mages before dawn (go after sunset, get out before sunrise). Go through this area carefully, but try to avoid too many unnecessary combats. Start by going south and around from where you enter to find the torture room, and go up the stairs to trigger the beginning of the rescue (there is, of course, much more to do after that).

Harbor Basin: See the King of the Nix (not basketball players, heh!). Be sure nothing happens to Zoeka while she's in the party (she is quite useless, by the way). Walk around different places until you spot a Nix acting in a stealthy manner and follow him. Short blade weapons such as daggers work best against the plant.

Even Star: Take off the lead shoes to float up to the door inside. Use the glow wand and prism to open the doors. When you get to the water elements, keep everyone back and send your best fighter to the one at the chest. This is the key criterion; killing him disperses all the monsters. After opening the chest, return to the Nix King.

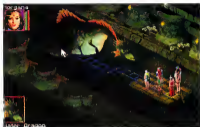

End Game:

Nasty, nasty, nasty. You go in naked and unarmed. Get some stones from the pile where you enter for later use. Move around carefully down here. One fight against a single woman gets you an egg; you need this, so take it with you. Some branches elsewhere

can be made into shingshots for your Elves to use as missile weapons. That's after you fight the spider (check the walls). You can also find some mushrooms that heal and restore astral points; use them sparingly. There are two main fights on this level; the really big one is at the entrance to Level 2. This (aside from Quercie) is the toughest combat in the hall.

Two Illusions on Level 2: Detach your most courageous person to cross both the fire wall and the corpse pit, then bring the rest over and join up. Go along very carefully down here to avoid combats (most lights can be avoided). One room has a single worm licking amber; kill him and take some for yourself. This is more healing stuff. The nastiest place on the level is the Ithama room, which you must pass through. Whatever you face in here (situations are random), the usual rule is to always do what seems like the wrong or evil thing.

Labyrinth: Just confusing, not dangerous. There are no combats here (whew!).

MUCH MORE THAN A SEWER RAT Descend into the sewers and get rid of that big bad water dragon. Again, combat is the same as before.

You will have to make a roundabout journey from your starting point to the exit in the southwest corner of the maze. Your autopap won't be of much help. Take your time and be patient.

Secret Doors: A flower flute (you'll have to make one) will get you through. After taking out the fake Queen (this is very obvious, as the fight is much too easy), keep going. But go slow. A short way along, you will have to fight mirror images of the party. This can be very tough, as it has to be done quickly. Best bet: Send your magician on alone, and take out the doppelgänger with Paralyzes or Salothor.

The Queen: Get your fighters up to the front of the group as quickly as possible to face her. They won't do much (or, more likely, any) damage to her, but she will be too distracted to cast her own spells. Let loose with Fulminatus and hope for the best. Good luck!

That's about it for now. In the meantime, if you need help with an adventure game, you can reach me in all the usual ways. Until next time, happy adventuring! ☺

UNDER THE SEA... While the basic engine is the same, at least this time you have cooler locations to go to, such as the sunken ship. Even Star, shown here.

CIRCLE READER SERVICE #241

WEBSITE <http://www.AccessSoftware.com>

Adventure

THE LAST EXPRESS

Are you enjoying the mystery, but getting a little tired of fistfights? When the fight begins, click the right mouse button to abort the fight and return to the egg clock screen. Then click on the egg clock to restart the fight. After you repeat this procedure five times, your character proceeds as if he has won the fight. Sure, it's a little tedious, but less so than the arcade fighting sequences.

Puzzles/Classics

MARBLE DROP

With a scarcity of good puzzle games for the summer, this game still attracts a lot of attention with its challenging puzzles. While not as hard as the invisible puzzle, *Marble Drop* is harder to pronounce. In using the following solution, keep in mind that you should follow the sequence exactly, and be sure to let each marble drop as far as possible before dropping the next marble in the sequence.

Action

MDK

These cheat codes could be useful in your upcoming battle with Custer. Make sure you use the right cheat for the

right version of your game, and remember that each cheat works only once per level, so save that code until you really need it.

Codes for unpatched final North American executable:

makeafull Health
masterblaster Gatt powerup
twistandshoot Twister powerup
biggrenade Homing sniper grenade
486willbeslow Lets 486 machines run

Codes for all patches:

ineedabiggun Super Chain Gun powerup
holokurtislan Dummy powerup
nastyshotthanks Homing sniper grenade
tornadoway Twister powerup
486ok Lets 486 machines run

CARMAGEDDON

No one is going to accuse this game of being a racing simulation, but it does model some automotive aspects surprisingly well. For instance, if you try to use the handbrake as your main brake, you'll trash your car. Instead, use the handbrake for tackling tough corners.

If you hold the handbrake, the wheelspin, a direction key, and accelerate buttons together, then release the handbrake, you can spin your car around in a circle on the spot—rather handy in car-to-car duels.

As for checkpoints are concerned, you do have to hit them in the correct order; you don't have to follow the suggested green paths. Drive aggressively!

Marble Drop Solution:

1. Left **steel (or orange)**
2. Right **orange**
3. Right **red**
4. Left **orange**
5. Left **blue**

6. Left **blue**
7. Right **red**
8. Left **orange**
9. Left **violet**
10. Right **blue**
11. Left **red**

Strategy/Wargames

DUNGEON KEEPER

There are many mysteries in Bullfrog's **DUNGEON KEEPER**, but few as darkly shrouded as the Temple sacrifice. The fetid waters of the Temple pools accept all offerings, but the gods are a fickle lot,

and only certain creatures—and combinations of creatures—will please them. Here's a list of sacrificial combos that are sure to reap rewards... and a few that surely won't.

What You Give	What You Get
Spiders x 3	Demon Spawn
Fly + Spider	Warlock
Bertie + Spider	Mistress
Mistress + Bill the Demon + Troll	Horned Reaper
Fly x 2	Current library research instantly completed
Battle x 2	Current workshop project instantly completed
Imp	\$150 off every subsequent Imp purchase (works best in bulk)
Elf Demon x 2	Your creatures become chickens; useful?
Ghost	All chickens in Hatchery are vaporized
Chicken	Same: Bcwnwkk!
Vampire	Your creatures become diseased

THE ARDENNES OFFENSIVE

When the computer calculates the combat algorithms, the two most important factors are tactical advantage and divisional integrity. Since any defending unit gets an automatic four-column odds shift, the only way to overcome this advantage is to attack from several hexes. Keep in mind that divisional integrity bonuses vary with each division and are further modified by the number of adjacent units actually attacking. A crack SS division, or the famous U.S. Big Red One, packs a lot more punch than an ad hoc 1944 Wehrmacht formation.

When you attack, remember that the initial odds shown represent only one attacking unit. To call in all available support, just hit the MAX button on the tactical display. If you are in an obvious overall situation, don't waste firepower: "Turn off" units you don't need in this particular attack until you reach optimal odds.

Simulations/Space

PRIVATEER 2: THE DARKENING

Chest Codes* for space flight

1. Type **AIRN** to get to the navigation screen
2. Type **F**
3. Type one of the following codes, then press Enter:

Codes

NO TALENT	Invincibility
REP ME UP	Repairs weapons, shields
PETY PETY	Refills afterburner fuel
CHILL OUT	Cools down lasers
NAPALM	Unlimited nukes

*these codes last until you land again

WARBIRDS

Now that I-Magic Online's **WARBIRDS**, a free download from www.icigames.com, supports free head-to-head play, many sim pilots are trying it for the first time. Because its realistic flight modeling can keep some pilots who trained on older sims stuck on the ground, we're including the following primes:

Takeoff: Warbirds' planes properly model engine torque, and many pilots find themselves careening into the control tower when they try to take off. First, apply engine power slowly. Then, if you find your plane pulling to the left, simply apply right rudder using the keyboard, molder pedals, or, if you have a Sidewinder joystick, by twisting the stick to the right. If you don't have pedals, you can cheat a bit and use the automatic trim system to straighten the plane's flight path—just hit **X** to engage the automatic trim system and then pull back on the stick to disengage it.

Cruise: In the air, you'll also find your plane doesn't always want to follow a

straight path. The following keys will trim your plane for different cruise situations:

- X** Set straight-and-level cruise
- Ctrl-X** Angle trim; keeps the plane at the current climb or dive angle
- Alt-X** Speed trim; causes the plane to climb or dive to maintain current speed

Just as in a real plane, trim is affected by speed. So if you set the trim for straight-and-level cruise at 250 knots and then you freewheel the throttle, your plane will pick up speed and start to climb. Simply hit **X** twice to disengage and reengage the trim for the new speed.

YOU'RE DASH RENDAR - QUICK ON THE TRIGGER OF A BLASTER.

IT'S YOU AND YOUR TINY SNOWSPEEDER VERSUS A GIANT, IMPERIAL AT-AT.

SPEEDER BIKE MODE - FAST-PACED ACTION WITH A KICK START.

THERE'S A NEW FACE OF
EVIL IN THE UNIVERSE.

[AND YOU THOUGHT IT COULDN'T GET ANY UGLIER.]

STAR WARS®
SHADOWS OF THE EMPIRE

REQUIRES
3D
ACCELERATOR

Enter Prince Xizor - the newest villain in the Star Wars universe. In *Shadows of the Empire*, you'll encounter him along with a host of new Star Wars characters, vehicles and locations. With your 3D accelerator, it's a fast, sharp, colorful universe - so detailed, in fact, you can see the trigger of a blaster. Enter the fray in 5 gameplay modes; ground shooter, space combat, speeder bike, jet pack and snowspeeder - all in an effort to protect Luke from the evil clutches of Xizor - a face of evil so dark, you'll only find him in the shadows. www.lucasarts.com

©, TM & © 1997 Lucasfilm Ltd. All Rights Reserved. Used Under Authorization. Star Wars and the LucasArts logo are registered trademarks, and Shadows of the Empire is a trademark of Lucasfilm Ltd.

A dark, atmospheric night scene in a forest. A car is overturned on its side in the lower right, with its headlights on. A large tree trunk is on the left, and a fallen log lies across the middle ground. The scene is dimly lit, with some light reflecting off the car's body and the forest floor.

Don't blink. It can sense movement.

Longbow 2

Nocturnal by design, the Longbow instinctively blends into the night, striking from the shadows. Prepare for the next generation of 1996's Simulation of the Year: Longbow 2. Immerse yourself in a complete combat experience at the controls of a Longbow gunship, Kiowa scout, or Blackhawk transport (Can you say...door gunner?). Take off fast with interactive tutorials and unlimited instant action missions. The two dynamic campaign environments make for unparalleled replay value. And you won't need to fly alone with a full complement of multiplayer modes. The photo-realistic graphic detail — 8 times as sharp as the original — makes this look like real war. Longbow 2. Clearly the most authentic simulation you can play without high-level government clearance.

Scenario A

Scenario B

THE ANSWER TO WORLD PEACE IS TO DIVERT ALL HUMAN CONFLICT AWAY FROM REALITY BY LOGGING ON TO HEAT.NET NOW!!!

This box makes it easy to play against live competition on the HEAT.NET internet game network—more importantly, it is the bus on the road to world peace! CyberDiversions Theory says, if we divert humankind's primal aggressive urges away from reality and onto the internet, we can end real-life violence and create lasting peace!!

CYBERBULLETS CAUSE NO PAIN!!!

Net Frighter

Scout: Industrial Evolution

Death Drone

Alien Race

CONTENTS OF BOX:-

- 1) HEAT™ CD (allows you to log on to HEAT.NET, where you can play almost all of your multi-player PC CD-ROM titles, including Quake™, Warcraft II™ and Scout: Industrial Evolution™)
- 2) six months' premium membership (earn frequent player points, compete in tournaments, gain access to the latest games)
- 3) a month's free internet access

4) exclusive HEAT games, including DeathDrome™, Alien Race™ and Net Fighter™

5) HEAT T-shirt (show your solidarity with the movement)

Log on to HEAT.NET NOW! A LIFE SPENT ON HEAT

IS A LIFE SAVED ON EARTH!!!

HEAT IS THE ANSWER!

Uncle John's
BATHROOM READER

www.johnsattic.com

Meet John. He's a gaming fanatic, inventor and something of a pack-rat. He's also got a little internet attic that's crammed to the rafters with computer & video games and accessories. All at prices that are as low or better than any store or internet source.

Buy your

GAMES

at the right price, and get 'em quick!

Search!
for over
6,000
games
with our
Findomatic

So, the next time you're wandering the net, stroll up the stairs to Uncle John's Attic. The floor boards may creak but the price and selection are always the best! If you're not on the web you can call Uncle John direct at: **1-800-397-7254.**

Welcome to the Cooperstown of Computer Games. Here you'll find, raised upon pedestals, the games that broke

the records, established the benchmarks, and held gamers in delighted trances for hours untold.

HIGHLIGHTS

Starflight

Electronic Arts, 1986

Imagine an intergalactic role-playing game with 270 star systems, each with up to eight planets. Now, imagine creating a custom configuration for your interplanetary starship and hiring a custom crew to explore that universe. Such was the setup for *Starflight*, one of the largest and most open-ended role-playing games ever. Each planetary landscape was interesting, since the program used fractals to generate unique maps and you had to decide where to mine for the elusive Endurium that fueled your ship and paid your way.

Your goal in *Starflight* was to explore the 270 star systems and find a replacement for the planet Arth, your home planet. You needed to find this replacement in order to evacuate the residents of Arth prior to an imminent disaster. Along the way, you ran into the most alien group of aliens ever seen in a computer game: You met the Vefox, intergalactic gossips with a superiority complex; the Spomin, an egocentric race that make Klingon propagandists seem humble; the Eloxan, the species with the most complete knowledge of the galactic situation; and a host of others. If they all sound bizarre, just remember that coauthor Greg Johnson also wrote the weird alien conversations in *Star Control 2*. Not only were the aliens themselves interesting, but you were also challenged to adopt a negotiating posture with them in order to wrangle any useful information out of them. This was one of the most innovative facets of the system. *Starflight*'s scope, quality of writing, use of fractal-generated planets, and understanding of ethical dilemmas made it one of the watershed products in role-playing history.

SimCity

Maxis Software, 1987

Even when *CSW* published the first review of this classic, the editors believed *SimCity* would have limited appeal. Why would anyone want to play a game about urban planning? Even *SimCity* designer Will Wright didn't realize what he'd done when he combined the town editor from his classic *Two on a Blackboard* with his interest in building cities. *SimCity* started out as a playground for his imagination and became the most successful "software toy" ever published. Wright was inspired by a short story from Stanislaw Lem's *The Cyberiad* called "The Seventh Sally," conversations with his MIT urban planning graduate neighbor, and many days of creating cityscapes with his old town editor. He ended up creating a game in which you built cities for the benefit of simulated citizens (the underlying spreadsheet mechanics of the game). He then noticed that whenever he would demo the game to focus groups, people would get manic with the bulldozer and have as much fun destroying the cities as building them. He decided to put in some air crashes and natural disasters to make things a little more interesting.

When Wright tried to sell the game to Broderbund, the company opted not to publish the title because it wasn't enough of a game. So, in an attempt to save it, he put in some scenarios with specific victory conditions. Ironically, very few gamers ever played the scenarios. Everyone seemed to prefer creating their own problems and either solving them or invoking Armageddon via natural disasters.

X-Com
 (MicroProse, 1994)

Computer game programs have grown so massive, and the number of hardware configurations has become so huge, that incompatibilities and glitches are frustratingly common.

30-Ultra Pinball 2—Creep Night V1.1 for Mac: This version corrects the "black quit screen" problem, as well as some sound hiccups.

A-10 Cubat V1.2: Faster frame rates, better messaging, and better joystick controls are but a few of the improvements to keep you in the air longer. Beware: This works only if you have the previous 1.01 patch installed.

AH-64 Longbow Gold V1.04: Fixes movie player and garbled speech problem for the gold version of this Jane's combat sim only.

Archimedean Dynasty V1.120: View clips from the game with the new movie player, and use the Transparency effect from the VedioGraphic menu to see through explosions and other environmental effects. Added Z-buffering allows for more accurate targeting as well.

ATF Sounds: Better explosions through optional digital sounds for NATO Fighters or ATF Gold.

Broken Alliance V1.02: Latest upgrade for HPS Simulations' add-on to *Panthers in the Shadows*.

Civilization II Scenarios V1.1: Mostly tweaking to balance scenarios and to stiffen the challenge of this commendable add-on pack.

Command & Conquer for Mac V1.7.1: Note: If you fail to trash your old C&C version (and empty the trash can), when you play an Internet game, Mac WCHAT will detect the old version (even if it's in the trash can) and prompt you for an update (even though you've already updated).

Craggerfall Saved Game Patch: This magic bullet allows you to use older saved games with the latest *Dungeons* patches. It's not fool-proof, but it helps.

Gawn Patrol V1.7: New wings for Empire's veteran WWII flight sim.

Osabo V1.04: This amulet of patch protection prevents invalid packets from crashing multiplayer games, fixes the Hidden Shrine freeze-up, and prevents the Black Death crash.

Dragons in the Mist V1.01: Patch in the Pacific, WWII.

Flying Corps V1.00a: Additional hotkeys for camera and cockpit views add even more visceral excitement to Empire's acclaimed WWII flight sim.

Harpoon Classic '97 V1.63d: The latest Win 95 executable to make your favorite fleet more seaworthy.

Interstate '76 V1.06: More than a dozen fixes make this the hippest, baddest multi-melee around—especially since the host no longer gets double kills, and "partial deaths" are no more.

Jack Nicklaus 4: Slice, hook, and putt much faster over the Net, even when using machines with only the minimum system requirements.

Magic The Gathering V1.1: Better AI, sound, and animation are but a few of the fixes in MicroProse's version of the Wizards of the Coast classic.

MechWarrior Mercenaries V1.06: Regardless of clan affiliation, all will benefit from this latest upgrade, which repairs more 'mech deficiencies.

MDK Sound Fix: Eliminates the hang-up bug that occurs when you lose the World's Smallest Nuclear Explosion. Warning: for DOS version of MDK only!

MDK Video Patches: If you thought the mayhem was merry before, wait until you see the

Software fixes, or "patches," for buggy programs have become a necessary evil until we reach the golden age of standardized platforms and bug-free programs. New patches are in red.

SVGA-graphics carnage with these patches for 3DIX and Rendition-based cards!

Outlaws V1.1: 3DX support makes this faster on the draw than Jesse James.

Settlers 2 V1.51: MIDI and mouse problems are cleaned up, but this patch makes your current saved games unplayable. Finish any current maps, then start on the next map after installing the update.

US Navy Fighters '97 V1.3: You'll fly faster with fewer 3D complaints. This also enables dogfights over TCP/IP.

X-Wing vs. TIE Fighter V1.10: Your fighters now handle better than a wet womprat in an ice storm on Hoth during multiplayer games.

► Check for new patches on the demo disc.

Patches can usually be downloaded from online networks (such as CompuServe and ZDNet), from CGW's Web site (www.computergaming.com), or from the individual software publisher's Web site (see listing below).

THE COMPUTER GAMING POLL • A MONTHLY SURVEY OF CGW SUBSCRIBERS

Each month, 2,000 CGW subscribers are selected at random to rate 100 computer games. The results of that poll are combined with the results of previous months to yield a cumulative average for the best plays in gaming. If you receive a ballot, please return it with your ratings so that other gamers and game publishers can benefit from your feedback.

Games on unnumbered lines are tied with game on line above. ★ = Top game of type. Red = New Game. AD = Adventure, RP = Role-Playing, SI = Simulation/Space Combat, ST = Strategy, WG = Wargame, AC = Action, SP = Sports, CP = Classic/Puzzle. Games are retired after two years and become eligible for the Hall of Fame.

What's the Deal with...Ethics?

Nearly a year ago I started a minor news-group brush-fire when I made a fairly oblique reference to a dubious moment in game-reviewing history. This minor debate eventually came to a head with a thought-provoking letter published in this magazine. In it, the reviewer I made reference to—Mr. Trotter—very graciously explained the bad situation he had found himself in, and the resulting state of mind that led him to oversteer a game that he was reviewing (for a competing magazine), after having written a strategy book for the selfsame game. Mr. Trotter's eloquent explanation certainly dispelled my lingering resentment over the incident, and almost made me feel bad about bringing it up at all. I say "almost" because I think anything that leads to healthy debate in the industry is a good thing, regardless of how awkward it can be.

Unfortunately, one aspect of the online squabble lingers on. We still haven't settled the issue of ethical behavior on the part of a game reviewer, and to be honest, some of the stuff I'm hearing out there is starting to bug me again.

Recently, some professionals have begun to express an almost impartial arrogance toward the consumer. It goes something like this: "If only you poor slobs had the slightest inkling of the true machinations of publishing,

you would realize the simple truth: We Gods-amongst gamers make so little in the way of royalties from the sale of these strategy books that only a moron would believe we'd risk our credibility by purposely giving a bad game a good review just to sell a few more books."

“ Readers must be able to believe not only in the magazine they read, but also in the individual writers who write for it.”

Now to a certain extent, this point is valid. If you readers could look over the average strat book contract, you would indeed see that no one is going to get rich from royalties earned in this business. On the other hand, don't let anyone fool you into thinking that there's no difference in

your next advance if your last guide was for Quake instead of The Sims Viva. Anyone who does a strat guide wants it to be for a Top 10 game.

But be that as it may, the technical reality of how much a reviewer stands to gain financially is actually irrelevant, compared to how such situations appear to the average reader. To mangle a phrase from this decade's favorite fantasy hero, "Impropriety is as impropriety does."

Who cares what we "in the know" really know? What matters is what readers think when they see the same name on a review that they saw on a \$20 strat guide. Do they sagely nod and say, "The realities of professional publishing make it unlikely that we're the victims of a scam"? Somehow I suspect the more likely scenario is that the magazine that publishes that review loses another customer forever. Even in cases where the game, the review, and the strat guide are all of high quality, it does the business little good if a writer is responsible for a big money guide book and then pens the review of that same game. If we lived in a world where reviews were written first, and strat books second, it might be different—but we can all remember seeing guides that have beset the game to the shelves.

It just doesn't look good, and it's a practice that should stop, if for no other reason than the fact that the amount of money to be made from the review is paltry compared to the money made from the strat guide.

Why give even the appearance of impropriety for a paltry few hundred dollars when the book has already earned you a few Gs of cool, hard cash? Let somebody else do the review, so that people have one less reason to believe that all gaming journalists are "on the take."

All computer game magazines exist on the fine edge of reader trust. (Okay, reader trust and the desire to see cool screenshots of games that are going to be vaporware for at least another two years.) Readers must be able to believe not only in the magazine they read, but also in the individual writers who write for it, or logically they're wasting their money. While I am thrilled that some of you out there will stick with the Fourth Estate through thick and thin, I'm not going to be the one explaining, "Gee—sure I wrote a great review of that game, but it had nothing to do with the company flying me down to see their late beta for an all-expenses-paid week..."

You folks out there don't have months of design notes, long personal talks with the designers, or pleasant tours through spiffy offices to help you get the most out of a game, and neither should we. If we are in a position to know so much about a game then we obviously are a little too close for an impartial judgment. We should leave that particular review to someone else. Period.

Absolute impartiality, both in reality and appearance, should be the only real ethic in this business...everything else is just sophistry and smoke. ☹

GAME... ...Meets Three Legendary Eras

It's not always sunny on the gridiron — battle it out in snow, sleet, and rain. You'll have to adjust your gameplan to win.

1932

- 20-man rosters require most of your players to play both offense and defense. Get ready to use Dan Marino as a defensive back or Junior Seau at running back!

1950

- Rules favor the running game.
- Goal posts were placed in the front of the end zone. The "Post" pattern was commonly used to run defenders into the posts for an easy touch-down reception.

Build a football dynasty like Dallas or San Francisco. Draft, trade, and manage players throughout entire careers!

1968

- Play a little rougher on the receivers. You can hit them anywhere on the field until the ball is thrown...and it's all legal!
- Players like Dick Butkus ruled the gridiron, paving the way for the modern-day player.

In Stores
September 1st!

- Advanced A.I. with team specific styles and coaching strategies
- Intense multi-player action using the Gravis Grip Multi-player adapter
- "Time Travel" with teams to create fantasy matchups
- Action and Coach Mode play
